RE: Adams Field Wastewater Treatment Facility
Wet Weather Peak Flow Blending
NPDES Permit No. AR0021806 AFIN: 60-00409

Dear Mr. Healey:

Due to the excessive rainfall received over the past several days, significant increases in collection system flows were experienced. After storage capacities were exhausted, Adams Field began the diversion of wet weather flow around secondary treatment components this afternoon. A written report will be submitted within 5 days of the end of the blending event.

Should you have any questions concerning this notification, please give me a call at 501-688-1543 or by e-mail at john.thompson@lrwu.com.

Sincerely,

LITTLE ROCK WASTEWATER

John M. Thompson
Plant Supervisor
Adams Field Treatment Facility
