

# Workforce Development & Pipeline Building Model:

## Prairie View A&M University Industry Collaborative Program

United States Business Council  
for Sustainable Development

# The Opportunity: Public-Private-Partnership

---

***In order to achieve US Energy Transition initiatives and global United Nations Sustainable Development Goals, a more inclusive tent of research minds is necessary.***

- *2020 NRG engaged the US-BCSD for stakeholder engagement & curriculum development*
- *Identified HBCUs/MSI's as an underutilized resource that must be engaged to make Energy Transition goals a reality.*

**PVAMU's** commitment to academic excellence and current research areas makes it an optimal resource for innovative and transformative solutions:

- Carbon Capture
- Sustainable Agriculture + Industrial Hemp Research
- AI + Big Data
- Smart Grid
- Sustainable Energy

# The Engagement: Industry Driven Curriculum

NRG-PVAMU Spring 2022 Course: Energy + AI Nexus - A Systems Approach to Climate Change, Sustainability & Resilience

## **USBCSD/Strategic Partners etc.:**

- Andrew Mangum/Claude Griffin Founder/ EX-D USBCSD- P3 Engagement Oppty
- Tara Hemmer Waste Management, Chief Sust. Officer & SVP - Circularity
- Emily Morris Emrgy, CEO - Modular Hydro Power Generation
- Brian Kats Board Member, Smart Surfaces Coalition- Nature Based Solutions
- Jared Yarnall-Schane Biomimicry Institute - Nature Based Solutions
- Giulia Siccardo McKinsey & Co, Systems Approaches for Greater Impact
- Dr. Jon Frey HPE, Chief Technologist - Leveraging AI
- Roosevelt Huggins Black & Veatch, VP Renewable Energy - Microgrids
- Capgemini - AI+Energy Impact Nexus
- John Vicente, Gamut DX- IIOT
- Chet Hullum, Oracle – AI
- Terry Travis, CEO EV Noire
- Olugbenga Ajala, CEO Ashipa – Solar Systems

# Technological Impact Opportunities : *Follow the Money*

United States Business Council  
for Sustainable Development

## US-BCSD / Industry Stakeholder Engagement:

- Capstone Projects
- Internships

# Leveraging AI/ML : From Silos to Systems

## Electrification

- Electric-vehicle batteries
- Battery-control software
- Efficient building systems
- Industrial electrification

## Agriculture

- Zero-emissions farm equipment
- Meat alternatives
- Methane inhibitors
- Anaerobic manure processing
- Bioengineering

## Power grid

- Long-duration storage
- Advanced controls
- Software and communications
- Vehicle-to-grid integration
- Building-to-grid integration
- Next-generation nuclear
- High-efficiency materials

## Hydrogen

- Low-cost production
- Road-transport fuel
- Ammonia production
- Steel production
- Aviation fuel

## Carbon capture

- Pre- and postcombustion capture technologies
- Direct air capture
- Bioenergy with carbon capture and storage
- Biochar
- CO<sub>2</sub>-enriched concrete

# NRG+PVAMU SPR 2022 Case: P3 Research Capstone

---

## Climate Impact Solution:

### AI/Machine Learning & Predictive Analytics

The crux of the proposed P3 collaborative solution is to leverage the innate data points of Renewable Energy Technologies to build an integrated data set which facilitates AI-Machine Learning and Predictive Climate Risk Analytics

#### Summary

The proposed technological data sources will be Scalable Hydroelectric Technology, Solar PV systems, EV Smart Chargers, and Atmospheric data as well.

#### Outcome Goal

- The resulting Predictive Climate Risk Algorithm will be used to facilitate data driven, informed decision making by local and federal emergency planning authorities.
- Co-benefits/outcomes will be significant increases in LMI-C Vitality & Resilience, and Local Economic + Environmental Justice Initiatives.

#### Execution Synopsis/Data Points:

- EV Chargers: Geospatial usage data captured from strategically located EV Chargers along evacuation routes to assess and optimize community evacuation/migratory patterns during extreme climatic events.
- Scalable Hydroelectric: temperature, viscosity, flow rate, level (layered with oceanic data on El Niño/La Niña) etc.
- Solar PV Sys.: Irradiance, temperature, output, etc.
- Atmospheric Data: Wind speed/direction, Particulate Matter, etc.
- Smart Grid: Integrated Renewable Energy TOU, Frequency, Power Quality, etc. for interfacial layering of source data

# P3 Engagement & Research Opportunity : **SELECTED** for Biden-Harris CLEEN Project Solution

---

## **Climate Impact Solution:**

### **Solar + Soils Solution**

Nearly 50% of LMIC and minority populations live within 1 square mile of a known Superfund Site. Historically, industries which contribute to the aforementioned negative and disparate environmental impacts do so without yielding proportional benefits of Economic Mobility, Clean Energy (Energy Poverty), nor Climate Positive Impacts or Investments.

#### **Summary/Recommendation**

Assess current Superfund Sites for deployment of coupled Mycoremediation + Solar Solutions within US LMIC's. By deploying a renewable, remedial, and carbon sequestering solution on LMIC contaminated lands and Superfund Sites, the Biden-Harris Infrastructure Plan will convert a communal source of pain into an impactful resource of lasting promise within these urban communities.

#### **Outcome Goal**

As such, Superfund Sites and Brownfields present excellent opportunities for a Solar + Soil Nature-Based Solution : Promote EJ, mitigate disparate impacts, and reduce Energy Poverty.

### **Execution Synopsis/Data Points:**

- Soil mycoremediation: is a bioremediation process during which a contaminated soil is treated through the action of fungal metabolism. NOVOBIOM's mycoremediation solution also naturally sequesters carbon as part of their unique process. Solar Power Generation is feasible as many abandoned Superfund Sites present considerable amounts of acreage and optimal irradiance - which are both well suited for community/industrial scale Renewable Solar Generation depending on design layout, and setback requirements.
- Fungivoltaics: Due to fungal (Mushrooms) capacity for growth in shaded areas such as beneath Solar Panels, coupling mycoremediation processes with Solar Energy Generation constitutes a novel nature-based solution which restores contaminated sites, promotes carbon sequestration, and generates efficient clean renewable energy in the process.
