## Section II: INTRODUCTION

### Summary of Permit Activity

Consolidated Grain & Barge Co. (CGB) recently acquired a former cotton seed storage and processing facility located in Osceola, Arkansas, at 700 North Pearl St. AR 72370. With this purchase, CGB intends to establish a grain storage facility which will have the capability of receiving grain via truck and providing dry storage of the grain under covered buildings. CGB is proposing to construct an additional flat storage building (SN-04) with a storage capacity of 2.5 million bushels which will provide the site with four covered grain storage buildings with a total capacity of 3.5 million bushels of storage. The facility has submitted an application for an initial permit to operate a grain storage facility. The annual permitted emission rates are 20.0 tpy PM and 6.8 tpy PM<sub>10</sub>.

### Process Description

Consolidated Grain & Barge Co. (CGB) will build and operate a grain storage facility located in Osceola, Arkansas, at 700 North Pearl St. AR 72370. The facility currently has three covered storage buildings on site (SN-03, SN-05 and SN-06) with a total storage capacity of 1 million bushels. CGB is proposing to construct an additional flat storage building (SN-04) with a storage capacity of 2.5 million bushels which will provide the site with four covered grain storage buildings with a total capacity of 3.5 million bushels of storage. Two buildings, SN-03 and SN-04 (totaling 2.75 million bushels of storage capacity) will be connected to a conveying equipment (SN-07), and the other two buildings, SN-05 and SN-06 (totaling 0.75 million bushels of storage capacity) will have trucks dump grain within the buildings.

From the two receiving pits, the grain will be elevated into the two storage buildings (SN-03 and SN-04). The conveying equipment (SN-07) from the pits to the grain storage buildings (SN-03 and SN-04) will be covered and enclosed. From the storage buildings, the majority of grain loadout (SN-08) will occur within covered buildings; however, a small amount of grain loadout will need to occur outside via mobile or portable equipment.

The emission points include the two receiving pits (SN-01 and SN-02), the fully enclosed conveying equipment (SN-07), the truck dumps located with the buildings, and the covered storage building vents (SN-03, SN-04, SN-05 and SN-06), and the truck loadout (SN-08).

(j) *Grain unloading station* means that portion of a grain elevator where the grain is transferred from a truck, railcar, barge, or ship to a receiving hopper.

(k) *Grain loading station* means that portion of a grain elevator where the grain is transferred from the elevator to a truck, railcar, barge, or ship.

(l) *Grain handling operations* include bucket elevators or legs (excluding legs used to unload barges or ships), scale hoppers and surge bins (garners), turn heads, scalpers, cleaners, trippers, and the headhouse and other such structures.

(m) *Column dryer* means any equipment used to reduce the moisture content of grain in which the grain flows from the top to the bottom in one or more continuous packed columns between two perforated metal sheets.

(n) *Rack dryer* means any equipment used to reduce the moisture content of grain in which the grain flows from the top to the bottom in a cascading flow around rows of baffles (racks).

(o) *Unloading leg* means a device which includes a bucket-type elevator which is used to remove grain from a barge or ship.

**§ 60.302 Standard for particulate matter.**

(a) On and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of this subpart shall cause to be discharged into the atmosphere any gases which exhibit greater than 0 percent opacity from any:

(1) Column dryer with column plate perforation exceeding 2.4 mm diameter (ca. 0.094 inch).

(2) Rack dryer in which exhaust gases pass through a screen filter coarser than 50 mesh.

(b) On and after the date on which the performance test required to be conducted by § 60.8 is completed, no owner or operator subject to the provisions of this subpart shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

(1) Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

(2) Exhibits greater than 0 percent opacity.

(c) On and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of this subpart shall cause to be discharged into the atmosphere any fugitive emission from:

(1) Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

(2) Any grain handling operation which exhibits greater than 0 percent opacity.

(3) Any truck loading station which exhibits greater than 10 percent opacity.

Permit #: 2382-A

(4) Any barge or ship loading station which exhibits greater than 20 percent opacity.

(d) The owner or operator of any barge or ship unloading station shall operate as follows:

(1) The unloading leg shall be enclosed from the top (including the receiving hopper) to the center line of the bottom pulley and ventilation to a control device shall be maintained on both sides of the leg and the grain receiving hopper.

(2) The total rate of air ventilated shall be at least 32.1 actual cubic meters per cubic meter of grain handling capacity (ca. 40 ft<sup>3</sup>/bu).

(3) Rather than meet the requirements of paragraphs (d)(1) and (2) of this section the owner or operator may use other methods of emission control if it is demonstrated to the Administrator's satisfaction that they would reduce emissions of particulate matter to the same level or less.

### **§ 60.303 Test methods and procedures.**

(a) In conducting the performance tests required in § 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of this part or other methods and procedures as specified in this section, except as provided in § 60.8(b). Acceptable alternative methods and procedures are given in paragraph (c) of this section.

(b) The owner or operator shall determine compliance with the particulate matter standards in § 60.302 as follows:

(1) Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

(2) Method 2 shall be used to determine the ventilation volumetric flow rate.

(3) Method 9 and the procedures in § 60.11 shall be used to determine opacity.

(c) The owner or operator may use the following as alternatives to the reference methods and procedures specified in this section:

(1) For Method 5, Method 17 may be used.

### **§ 60.304 Modifications.**

(a) The factor 6.5 shall be used in place of "annual asset guidelines repair allowance percentage," to determine whether a capital expenditure as defined by § 60.2 has been made to an existing facility.

(b) The following physical changes or changes in the method of operation shall not by themselves be considered a modification of any existing facility:

(1) The addition of gravity loadout spouts to existing grain storage or grain transfer bins.
