Pursuant to the Regulations of the Arkansas Operating Air Permit Program, Regulation 26:

Permit No. : 1791-AOP-R2

IS ISSUED TO:

City of Fort Smith Sanitary Landfill
5900 Commerce Road
Fort Smith, AR 72916
Sebastian County
AFIN: 66-00226

THIS PERMIT AUTHORIZES THE ABOVE REFERENCED PERMITTEE TO INSTALL, OPERATE, AND MAINTAIN THE EQUIPMENT AND EMISSION UNITS DESCRIBED IN THE PERMIT APPLICATION AND ON THE FOLLOWING PAGES. THIS PERMIT IS VALID BETWEEN:

AND

THE PERMITTEE IS SUBJECT TO ALL LIMITS AND CONDITIONS CONTAINED HEREIN.

Signed:

William K. Montgomery
Associate Director
DEQ, Office of Air Quality

UTM North South (Y): Zone 15: 3907016.53 m

UTM East West (X): Zone 15: 375708.93 m
SECTION II: INTRODUCTION

Summary of Permit Activity

The City of Fort Smith currently owns and operates a municipal solid waste sanitary landfill (FSLF) located in Fort Smith (Sebastian County), Arkansas. The site consists of approximately 1,012-acres and includes separate areas for Class 1 waste, Class 4 waste, and yard compost materials. The Class 1 area consists of approximately 555-acres. This permitting action is to renew the existing Title V permit. In addition to renewing the Title V permit, the following changes were made:

1. Combine all road emissions (Unpaved, Paved and Aggregate Handling) at SN-03.
2. Revise previous plantwide condition #14 (now plantwide condition #11) to require Toluene testing to verify calculations. The condition previously required site-specific individual HAP testing using EPA method 320.
3. Update SN-01 and SN-02 emission rates based on current Tier II test results.
4. Updated calculations at SN-04 and added throughput limit.

Permitted emission rates are increasing/decreasing by 23.4 tpy PM/PM$_{10}$, 0.2 tpy VOC, -3.7 tpy CO, 3.6 tpy NO$_x$, 1.11 tpy Single HAP, 9.14 tpy Total HAPs and 0.28 tpy Hydrogen Sulfide (H$_2$S).

Process Description

The Landfill is operated for the disposal of Class 1 and Class 4 solid waste. The total disposal capacity for the Landfill is approximately 72,607,000 cubic yards (CY) of void space.

Solid waste decomposition is initiated by aerobic bacteria present within the waste at the time of disposal. The primary gas produced during this phase of decomposition is carbon dioxide. As the oxygen supply is depleted, facultative bacteria continue the decomposition process. Ultimately, anaerobic bacteria become the predominant means of waste decomposition. Methane and carbon dioxide are produced at about a 50-50 ratio as the decomposition process proceeds in the facultative and anaerobic stages. Other components present in the gas include hydrogen sulfide and non-methane organic compounds (NMOC). Some NMOC are volatile organic compounds (VOCs) and/or hazardous air pollutants (HAPs).

The purpose of the Landfill Gas (LFG) Collection and Control System (GCCS) is to provide a safe, manageable, and efficient system for the recovery of gaseous by-products that are produced in typical municipal solid waste landfills. These gaseous by-products which consist of a mixture of NMOCs, methane, and carbon dioxide, are collected and utilized at a processing facility to make pipeline quality methane.

LFG collection systems are relatively simple in design and principal. Blowers provide a negative pressure that pulls LFG through the header system and toward the control device. The
goal of the LFG system operator is to balance the vacuum pressure at each well head in a manner that will provide an adequate amount of LFG control or “collection efficiency”.

Marrow Renewables operates the LFG Collection and Control System to ensure that the system is run in an efficient manner which does not interfere with normal landfill operations. The LFG is primarily utilized by an off-site end user. A backup flare is only operational at those times when LFG is not used for its primary purpose.

Emissions result from three (3) sources: (1) uncontrolled emissions from the landfill (SN-01); (2) emissions from the flare unit (SN-02); emissions from vehicles traveling over paved and unpaved roads (SN-03); and (SN-04) gasoline storage tank.

Additional insignificant activities at the Landfill include two diesel storage tanks.

**Regulations**

\(^1\)Hydrogen Chloride is not included in any HAPs totals.

\(^2\)Total HAPs includes Single HAP.

\(^*\)Air Contaminants such as ammonia, acetone, and certain halogenated solvents are not VOCs or HAPs.

Hydrogen Sulfide (H\(_{2}\)S) is included in Air Contaminants.
SECTION III: PERMIT HISTORY

Permit # 1791-A was the initial Minor Source permit for the facility. The permit was issued to the City of Fort Smith on January 20, 1999. Permitted emissions were: 5.3 tpy PM/PM\textsubscript{10}, 1.8 tpy VOC, 87.6 tpy CO, 16.2 tpy NO\textsubscript{x}, and 0.41 tpy HAPs.

Permit # 1791-AOP was the initial Title V permit for this facility. The permit was issued on July 19, 2010. Pursuant to 40 C.F.R. 60, Subpart WWW, the landfill was required to submit Part 70 (Title V) permit application when the landfill design capacity exceeded 3.27 million cubic yards. There is no increase in the design capacity of the landfill with this modification. Permitted emissions were: 119.5 tpy PM, 27.2 tpy PM\textsubscript{10}, 4.6 tpy SO\textsubscript{2}, 0.2 tpy VOC, 108.3 tpy CO, 19.9 tpy NO\textsubscript{x}, 2.30 tpy Hydrogen Chloride, numerous HAPs, and 4.04 tpy Hydrogen Sulfide. The increase of particulate (dust) emissions was due to uncontrolled landfill gas emissions (SN-02) and traffic emissions (SN-03) included in this Title V permit but not in the previous permit.

Permit # 1791-AOP-R1 was issued July 6, 2015. This permitting action was to renew the Title V permit. The 1,000 gallon gasoline tank was removed from the insignificant activity list and added as a source (SN-04) due to it being subject to NESHAP Subpart CCCCCC. Emissions were updated to be in line with current LandGEM test results and HAP reporting was updated to the current department reporting model. Permitted emissions were 121.1 tpy PM/PM\textsubscript{10}, 4.6 tpy SO\textsubscript{2}, 55.9 tpy VOC, 122 tpy CO, 19.9 tpy NO\textsubscript{x}, 2.62 tpy Single HAP, 12.08 tpy Total HAPs, and 1.7 tpy Hydrogen Sulfide.
SECTION IV: SPECIFIC CONDITIONS

SN-01 – Landfill Gas Surface Emissions (Uncontrolled)

Source Description

Uncontrolled emissions arising from the surface of the landfill (without the gas gathering system operating) are designated as SN-01. One hundred percent (100%) of the generated LFG may escape as Uncontrolled LFG Surface Emissions (SN-01) or otherwise migrate off-site. The most recent site specific Tier 2 testing was conducted on June 26, 2019 and August 2, 2019. The Tier 2 C_{NMOC} was 200 parts per million (ppm) by volume (v) as hexane, equivalent to 40.75 Mg/year NMOC (VOC) for the year 2018. For conservatism, potential SN-01 emissions are the calculated 2025 year emissions and no LFG collection is achieved.

Specific Conditions

1. The permittee shall not exceed the emission rates set forth in the following table. The permittee shall demonstrate compliance with this condition by compliance with Plantwide Conditions #7, #12, #14 and #18. [Reg.19.501 et seq. and 40 C.F.R. § 52 Subpart E]

<table>

</tr>
<tr>
<td></td>
<td></td>
<td>CO</td>
<td>2.6</td>
<td>11.2</td>
</tr>
</tbody>
</table>

* FSLF has assumed that all VOC surface emissions are NMOCs.

2. The permittee shall not exceed the emission rates set forth in the following table. Both hourly and annual uncontrolled surface emissions (SN-01) are worst case scenario when the GCCS is not in operation. The permittee shall demonstrate compliance with this condition by compliance with Plantwide Conditions #7, #11, #12, #14 and #18. [Reg.18.801 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

City of Fort Smith Sanitary Landfill  
Permit #: 1791-AOP-R2  
AFIN: 66-00226

SN-02 – Landfill Gas Open Flare Emissions

Source Description

The blower/flare station unit consists of a 2200 scfm blower that supplies the “vacuum” to transport the LFG to an open or “candlestick” flare unit. The blower/flare station includes valves and safety devices that prevent the system from collecting gas if the flare station is not operating. This flare unit (LFG Specialties, Inc. Model CF1228I12) is certified to meet the Best Demonstrated Technology (BDT) which mandates that the control device be capable of reducing (combusting) the NMOCs in the collected LFG by 98 weight-percent.

The flare is utilized when LFG is not transported to the Morrow Renewables Landfill Gas to Energy Plant and designated end user for the facility. The flare is not utilized when LFG is being transported to the end user or when the GCCS is not operating. Emissions from the open flare assumes a “worst case” scenario of continual flare emissions with no routing to the gas end-user.

FSLF’s GCCS will not be subject to 40 CFR Part 60, Subpart WWW – Standards of Performance for Municipal Solid Waste Landfills until the site specific NMOC surface emissions are determined to be ≥50 Mg per year. Therefore, use of the GCCS and flare are not required at this time. However, FSLF does have an unmonitored active landfill GCCS in-place, for gas migration and odor control. The flare generates combustion by-product emissions, mainly CO, NOx and hydrogen chloride (HCl).

Specific Conditions

3. The permittee shall not exceed the emission rates set forth in the following table. The permittee shall demonstrate compliance with this condition by compliance with Plantwide Conditions #14, #17 and #18. [Reg.19.501 et seq. and 40 C.F.R. § 52 Subpart E]

</tbody>
</table>

¹Hydrogen Chloride is not included in any HAPs totals.
²Total HAPs includes Single HAP.

5. The permittee shall maintain records to demonstrate compliance with Specific Condition #4. These records shall include the simultaneous gas flow to the flares in standard cubic feet per minute (scfm). The permittee shall monitor the gas flow to the flare continuously and shall be recorded once every 15 minutes. Electronic or paper hourly records shall be maintained of the flow rate to the flare. The permittee shall update these records by the fifteenth day of the month following the month to which the records pertain, shall be maintained on site and made available to Department personnel upon request.

6. Visible emissions may not exceed the limits specified in the table below. Compliance with this condition shall be demonstrated through the use of landfill gas as the only fuel combusted.

<table>
<thead>
<tr>
<th>SN</th>
<th>Limit</th>

</tr>
</thead>
<tbody>
<tr>
<td>02</td>
<td>0%</td>
<td>Reg.18.501, 40 C.F.R. § 60.18(f)(1) &amp; Dept Guidance</td>
</tr>
</tbody>
</table>

7. The permittee shall conduct weekly observations of the opacity of SN-02 and keep a record of these observations. The flare SN-02 shall be designated for and operated with no visible emissions, except for periods not to exceed a total of five (5) minutes during any two (2) consecutive hours. EPA Reference Methods 22 shall be used to determine compliance with the visible emission provisions of the flare. If the permittee detects visible emissions in excess of their permitted limit, the permittee must immediately take action to identify and correct the cause of the visible emissions. After implementing the corrective action, the permittee must document that the source complies with the visible emissions limit as specified in the permit.
emissions requirements. The permittee shall maintain records of the cause of the visible emissions and the corrective action taken. The permittee must keep these records onsite and make them available to Department personnel upon request. [Reg.18.501 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

8. The permittee must operate the flare (SN-02) pilot flame within the design limitations and manufacturer’s specifications. The pilot flames may be lit by landfill gas, natural gas, or propane. [Reg.19.303 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

9. The flare (SN-02) must have a flame present at all times of operation or if no flame is present, the orifice of the unlit flare must be closed and the GCCS piping to the unlit flare shutdown to prevent passive venting of uncontrolled landfill gases. The presence of a flare pilot light shall be monitored continuously using a thermocouple, an ultraviolet sensor or any other equivalent device to detect the presence of a flame. In the event of a flame failure, the extraction system directed to the flare must automatically shut down to prevent passive venting of landfill gas. [Reg.19.304 and 40 C.F.R. §§ 60.18(b) through (f)]

10. Flares shall be used only with the net heating value of the landfill gas being combusted being 200 BTU/scf (7.45 MJ/scm) or greater for non-assisted flares (SN-02). The net heating value of the gas being combusted shall be determined by the methods specified in 40 C.F.R. Section 60.18(f)(3). A copy of the calculations shall be kept on site and made available to Department personnel upon request. [Reg.19.304 and 40 C.F.R. §§ 60.18(c)(3)(ii)]

11. Non-assisted flares (SN-02) shall be designed for and operated with an exit velocity less than 60 ft/sec (18.3 m/sec). The maximum permitted velocity shall be calculated as specified in 40 C.F.R. Section 60.18(f)(5). The actual exit velocity shall be determined as specified in 40 C.F.R. Section 60.18(f)(4). A copy of the calculations shall be kept on site and made available to Department personnel upon request. [Reg.19.304 and 40 C.F.R. §§ 60.18(f-4-5)]
SN-03 – Traffic Emissions (Uncontrolled)
(Paved and Unpaved Roads and Aggregate Handling)

Source Description

Particulates (road emissions) are emitted from the operation of vehicles and equipment over the paved and unpaved roads, aggregate handling, and wind erosion of storage piles and from the placing of soil cover material on the landfill surface. These activities are collectively referred to as Traffic Emissions (SN-03). Dust controls may include water dispersion equipment, sweeping, and other techniques.

Specific Conditions

12. The permittee shall not exceed the emission rates set forth in the following table. The permittee shall demonstrate compliance with this condition by compliance with Specific Conditions #14 and #15 and Plantwide Condition #9. [Reg.19.501 et seq. and 40 C.F.R. § 52 Subpart E]

<table>
<thead>
<tr>

14. The permittee shall not operate in a manner such that fugitive emissions from the storage piles, aggregate handling, and haul roads (SN-03) would cause a nuisance off-site or allow visible emissions from extending beyond the property boundary. Under normal conditions, off-site opacity less than or equal to 5% shall not be considered a nuisance. The permittee shall use water sprays, sweeping, or other techniques as necessary to control fugitive emissions that migrate off-site. [Reg.18.501 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

15. Nothing in this permit shall be construed to authorize a violation of the Arkansas Water and Air Pollution Control Act or the federal National Pollutant Discharge Elimination System (NPDES). [Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]
SN-04 – 1,000 Gallon Gasoline Tank

Source Description

The facility contains a 1,000 gallon gasoline tank for refueling purposes. During emptying or filling of the gasoline tank, VOC is emitted. These emissions are categorized under SN-04.

Specific Conditions

16. The permittee shall not exceed the emission rates set forth in the following table. The permittee shall demonstrate compliance with this condition by compliance with Specific Condition #18. [Reg.19.501 et seq. and 40 C.F.R. § 52 Subpart E]

18. The permittee shall not exceed an annual gasoline usage of 24,000 gallons per consecutive 12-month period. [Reg.19.705 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311 and 40 C.F.R. 70.6]

19. The permittee shall maintain monthly records which demonstrate compliance with Specific Condition #18. Records shall be updated by the fifteenth day of the month following the month for which the records pertain. These records shall be kept on site, and shall be made available to Department personnel upon request. [Reg.19.705 and 40 C.F.R. § 52]

NESHAP Subpart CCCCCC Conditions

19. The permittee must not allow gasoline to be handled in a manner that would result in vapor releases to the atmosphere for extended periods of time. Measures to be taken include, but are not limited to, the following: [Reg.19.304 and 40 C.F.R. § 63.11116 (a)]
(i) Minimize gasoline spills;
(ii) Clean up spills as expeditiously as practicable;
(iii) Cover all open gasoline containers and all gasoline storage tank fill-pipes with a gasketed seal when not in use;
(iv) Minimize gasoline sent to open waste collection systems that collect and transport gasoline to reclamation and recycling devices, such as oil/water separators.

20. The permittee is not required to submit notifications or reports as specified in this subpart or subpart A of this part, but the permittee must have records available within 24 hours of a request by the Department to document the permittee’s gasoline throughput. [Reg.19.304 and 40 C.F.R. § 63.11116 (b)]

21. The permittee must comply with the requirements of this subpart by the applicable dates which are specified in §63.11113. [Reg.19.304 and 40 C.F.R. § 63.11116 (c)]

22. Portable gasoline containers that meet the requirements of 40 CFR part 59, subpart F are considered acceptable for compliance with paragraph (a)(3) of this section. [Reg.19.304 and 40 C.F.R. § 63.11116 (d)]
SECTION V: COMPLIANCE PLAN AND SCHEDULE

City of Fort Smith Sanitary Landfill will continue to operate in compliance with those identified regulatory provisions. The facility will examine and analyze future regulations that may apply and determine their applicability with any necessary action taken on a timely basis.
SECTION VI: PLANTWIDE CONDITIONS

1. The permittee shall notify the Director in writing within thirty (30) days after commencing construction, completing construction, first placing the equipment and/or facility in operation, and reaching the equipment and/or facility target production rate. [Reg.19.704, 40 C.F.R. § 52 Subpart E, and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

2. If the permittee fails to start construction within eighteen months or suspends construction for eighteen months or more, the Director may cancel all or part of this permit. [Reg.19.410(B) and 40 C.F.R. § 52 Subpart E]

3. The permittee must test any equipment scheduled for testing, unless otherwise stated in the Specific Conditions of this permit or by any federally regulated requirements, within the following time frames: (1) new equipment or newly modified equipment within sixty (60) days of achieving the maximum production rate, but no later than 180 days after initial start up of the permitted source or (2) operating equipment according to the time frames set forth by the Department or within 180 days of permit issuance if no date is specified. The permittee must notify the Department of the scheduled date of compliance testing at least fifteen (15) business days in advance of such test. The permittee shall submit the compliance test results to the Department within thirty (30) calendar days after completing the testing. [Reg.19.702 and/or Reg.18.1002 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

4. The permittee must provide:
   a. Sampling ports adequate for applicable test methods;
   b. Safe sampling platforms;
   c. Safe access to sampling platforms; and
   d. Utilities for sampling and testing equipment.

   [Reg.19.702 and/or Reg.18.1002 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

5. The permittee must operate the equipment, control apparatus and emission monitoring equipment within the design limitations. The permittee shall maintain the equipment in good condition at all times. [Reg.19.303 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

6. This permit subsumes and incorporates all previously issued air permits for this facility. [Reg. 26 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

7. The facility’s current Class I, Solid Waste Permit #0267-S1-R1, issued August 8, 2003, permitted a maximum design capacity of 72,607,000 cubic yards (CY). The permittee
shall weigh every incoming load of waste accepted by the facility on its truck scale. The permittee shall update its’ air permit to reflect the new capacity in the event that a new Solid Waste Permit is issued that allows an increase in the total capacity of the landfill. [Reg.19.705, Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311, and 40 C.F.R. § 70.6]

8. The permittee shall maintain monthly records to demonstrate compliance with Plantwide Condition #7. The permittee shall update the records by the fifteenth day of the month following the month to which the records pertain to. The permittee shall maintain a lifetime in-place total, a twelve month rolling total, and each individual month’s waste acceptance data on site, made available to the Department upon request and submitted semi-annually in accordance with General Provision #7 of this permit. Any density conversions shall be documented and maintained with these records. These records shall be retained at least 5 years. [Reg.19.705 and 40 C.F.R. § 52 Subpart E and/or Reg.18.1004 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

9. The permittee will limit all landfill operation hours to 12 hours per day, Monday through Saturday. [Reg.18.1004 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

10. The permittee will maintain monthly records of hours of operation which demonstrate compliance with Plantwide Condition #9. The permittee will maintain a twelve month rolling total and each individual month’s data on site and make these records available to Department personnel upon request. The permittee will update the records by the fifteenth day of the month following the month to which the records pertain. [Reg.19.705 and 40 C.F.R. § 52 Subpart E, Reg.18.1004 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

11. The permittee shall test the SN-01 site-specific Toluene emissions using EPA Method TO-15/16 sampling procedure or other methods, if the method has been approved in advance by the Department. Retests shall coincide with the Tier 2 test in Plantwide Condition #14. The permittee shall notify the Department of the scheduled date of testing at least fifteen (15) days in advance of such test, according to Plantwide Condition #3. Test results shall be submitted, with the NMOC results described in Specific Condition #14, to the Department within thirty (30) days after the completed testing at the address in General Provision #7, maintained on-site and make available to Department personnel upon request. [Reg.18.1002 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

NSPS Subpart WWW Conditions

12. The permittee is subject to and shall comply with 40 CFR Part 60 Subpart WWW - Standards of Performance for Municipal Solid Waste Landfills (Appendix A), since it has a design fill capacity in excess of 2,500,000 Mg and the facility was modified after May
30, 1991. Analysis of Tier 2 sampling conducted June 26, 2019 and August 2, 2019 calculated a 200 ppmv-hexane (44.66 Mg/yr NMOC projected for year 2025) at the Fort Smith Landfill. The gas collection and control system will be subject to the monitoring requirements of 40 CFR 60, Subpart WWW – Standards of Performance for Municipal Solid Waste Landfills, 30 months after the site specific NMOC emissions are reported to be equal to or greater than 50 Mg per year. [Reg.19.304 and 40 C.F.R. §§ 60.752 and 60.754(3)]

13. The permittee shall submit an SN-01 NMOC Emission Rate Report, which shall include a LandGEM generated HAP list, annually to the Department, except as provided for in §60.757(b)(1)(ii) or (b)(3). The Department may request such additional information as may be necessary to verify the reported NMOC emission rate. The annual NMOC Emission Rate Report shall contain annual, 5-year and remaining site life (in years) estimates of the NMOC emission rate calculated using the formula and procedures provided in §60.754(a) or (b), as applicable until the calculated NMOC emission rate equals or exceeds 50 Mg/yr or the landfill is closed. Calculations shall use the latest Tier 2 site-specific NMOC concentration [August 2, 2019, 200 ppmv-hexane] per §60.754(a)(3) and the actual annual solid waste acceptance data. Any density conversions shall be documented and submitted with the report. When calculated, uncontrolled NMOC (VOC) surface emissions (SN-01) exceed 50 Mg/yr, per the reporting requirements contained in 40 CFR §60.757(b), FSLF shall comply with NSPS Subpart WWW requirements contained in 40 CFR §60.752(b)(2). [Reg.19.304 and 40 C.F.R. § 60.757(b)]

14. The permittee shall retest the SN-01 site-specific NMOC concentration every 5 years using the Tier 2 test methods and procedures described in 40 CFR § 60.754(a) for as long as the calculated emissions are less than 50 Mg/yr. The next site-specific Tier 2 testing must be conducted prior to July 18, 2024, using the sampling procedures provided in §60.754(a)(3) and analyzing the landfill gas from the main landfill gas header or probe to determine the on-site NMOC concentration in parts per million (ppm) by volume (v) as hexane using Method 25 or 25C sampling procedure or other methods, if the method has been approved in advance by the Director. The permittee shall notify the Department of the scheduled date of testing at least fifteen (15) days in advance of such test, according to Plantwide Condition #3. Test results shall be submitted to the Department within thirty (30) days after the completed testing at the address in General Provision #7, maintained on-site and make available to Department personnel upon request. [Reg.19.304 and 40 C.F.R. § 60 Subpart WWW]

15. The permittee shall be required to modify this permit before starting any modification, construction, or reconstruction at the facility not described in this permit. The permittee is allowed to install additional gas extraction wells and remove and/or replace existing gas extraction wells; any such modifications shall be documented and a record maintained on site and make available to Department personnel upon request. [Reg.19.304 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]
16. The permittee shall maintain records of the following on-site and make available to Department personnel upon request:
   a. Submit a collection and control system design plan prepared by a professional engineer to the Department within 1 year, as required by 40 CFR §60.752(b)(2) and
   b. Install a collection and control system that captures the gas generated within the landfill areas required paragraphs by 40 CFR §60.752(b)(2)(ii)(A) or (B) and (b)(2)(iii) within 30 months after the first annual report in which the emission rate equals or exceeds 50 Mg/yr. [Reg.19.304 and 40 CFR § 60.752(b)]

17. When the calculated Tier 2 NMOC emission rate is equal to or greater than the 50 Mg/yr threshold level, the permittee shall:
   a. An up-to-date, readily accessible plot map showing each existing and planned collector in the system and providing a unique identification location label for each collector; and
   b. A readily accessible record of the nature, date of deposition, amount and location of asbestos-containing or non-degradable waste excluded from collection. [Reg.19.705 and 40 C.F.R. § 52 Subpart E]

18. Once estimated uncontrolled NMOC emissions equal or exceed 50 Mg/yr as calculated in accordance with 40 CFR 60.754, the permittee becomes subject to and shall comply with 40 CFR Part 63 Subpart AAAA – National Emission Standards for Hazardous Air Pollutants – Municipal Solid Waste Landfills. [Reg.19.304 and 40 C.F.R. § 63.1935]

Regulation 21 – Asbestos Abatement

23. The permittee is subject to and shall comply with Regulation 21, Arkansas Asbestos Abatement Regulation, §11.2 Standards for Waste Disposal Sites. [Reg.21.11.2(A-D), and 40 C.F.R. § 60.752]

24. The permittee of an active waste disposal site that received asbestos-containing waste material from a source covered by Regulation 21 shall meet the following requirements: [Reg.21.11.2(A)(i-ii)]

   (i) At the end of each operating day, or at least once every 24-hour period while the site is in continuous operation, the asbestos-containing waste material that has been deposited at the site during the operating day or previous 24-hour period shall:
      i. Be covered with at least 6 inches of compacted nonasbestos-containing material; or
      ii. Be covered with a resinous or petroleum-based dust suppression agent that effectively binds dust and controls wind erosion. Such an agent shall be used in the manner and frequency recommended for the particulate dust by the dust suppression agent manufacturers to achieve and maintain dust control. Other equally effective dust suppression agents may be used upon
prior approval by the Director. For purposes of this paragraph, any used, spent, or other waste oil is not considered a dust suppression agent.

b. Use an alternative emissions control method that has received prior written approval by the Director demonstrating the following criteria:
   i. The alternative method will control asbestos emissions equivalent to currently required methods;
   ii. The suitability of the alternative method for the intended application;
   iii. The alternative method will not violate other regulations; and
   iv. The alternative method will not result in increased water pollution, land pollution, or occupational hazards.

25. The permittee shall maintain waste shipment records (WSR) of all asbestos-containing waste material received: [Reg.19.705 and Reg. 21.11.2(B)(i-vii)]

   a. Maintain waste shipment records (WSR), using a form with the following information:
      i. The name, address, and telephone number of the waste generator;
      ii. The name, address, and telephone number of the transporter(s);
      iii. The quantity of the asbestos-containing waste material in tons;
      iv. The presence of improperly enclosed or uncovered waste, or any asbestos-containing waste material not sealed in leak-tight containers. Report in writing to the Department Official responsible for administering the Asbestos program for the waste generator (identified in the WSR, and, if different the local, State, or EPA regional office responsible for administering the asbestos NESHAP program for the disposal site, by the following working day, the presence of a significant amount of improperly enclosed or uncovered waste. Submit a copy of the WSR along with the report; and
      v. The date of the receipt.

   b. The permittee shall as soon as possible and no longer than 30 days after receipt of the asbestos-containing waste, send a copy of the signed WSR to the waste generator. [Regulation 21, §11.2(B)(ii)]

   c. The permittee shall check the WSR that accompanies each asbestos-containing waste shipment that arrives at the waste disposal site for accuracy of the quantity of waste designated and attempt to reconcile any discrepancy with the waste generator. If the discrepancy is not resolved within 15 days after receiving the waste, the permittee will immediately report in writing to the specific agency responsible for administering the NESHAP program for the waste generator. Describe the discrepancy and attempts to reconcile it, and submit a copy of the WSR along with the report. [Regulation 19, §19.705 and Regulation 21, §11.2(B)(iii)]

   d. Furnish upon request and make available during normal business hours for inspection by the Department, all records required under Regulation 21, §11.2. [Regulation 21, §21.11.2(B)(iv)]

   e. The permittee shall maintain a copy of all records and reports required by Regulation 21, §11.2 on-site for at least 2 years. [Regulation 21, §11.2(B)(v)]
f. Maintain until landfill closure, records of the location, depth and area, and quantity in tons of asbestos-containing waste material within the disposal site on a map or diagram of the disposal area. [Regulation 21, §11.2(B)(vi)]

g. Submit to the Director, upon closure of the facility, a copy of records of asbestos waste disposal locations and quantities. [Regulation 21, §11.2(B)(vii)]

26. The permittee shall notify the Department in writing at least 45 days prior to excavating or otherwise disturbing any asbestos-containing waste material that has been deposited at the waste disposal site and is covered. If the excavation will begin on a date other than the one contained in the original notice, notice of the new start date must be provided to the Department at least 10 working days before excavation begins and in no event shall excavation begin earlier than the date specified in the original notification. The following information shall be included in the notice: [Reg.21.11.2(C)(i-iv)]

   a. Schedule starting and completion dates;
   b. Reason for disturbing the waste;
   c. Procedures to be used to control emissions during the excavation, storage, transport, and ultimate disposal of the excavated asbestos-containing waste material (if deemed necessary, the Department may require changes in the emission control procedures to be used); and
   d. Location of any temporary storage site and the final disposal site.

27. Within 60 days of a site becoming inactive, the permittee shall record a notation, in accordance with Arkansas State law, on the deed to the facility property and on any other instrument that would normally be examined during a title search. This notation will in perpetuity notify any potential purchaser of the property that: [Reg.21.11.2(D)(i-ii)]

   a. The land has been used for the disposal of asbestos-containing waste material; and
   b. The survey plot and record of the location and quantity of asbestos-containing waste disposed of within the disposal site required in Regulation 21, §11.2(B)(vi) have been filed with the Department.

Title VI Provisions

28. The permittee must comply with the standards for labeling of products using ozone-depleting substances. [40 C.F.R. § 82 Subpart E]

   a. All containers containing a class I or class II substance stored or transported, all products containing a class I substance, and all products directly manufactured with a class I substance must bear the required warning statement if it is being introduced to interstate commerce pursuant to §82.106.
   b. The placement of the required warning statement must comply with the requirements pursuant to §82.108.
   c. The form of the label bearing the required warning must comply with the requirements pursuant to §82.110.
   d. No person may modify, remove, or interfere with the required warning statement except as described in §82.112.
The permittee must comply with the standards for recycling and emissions reduction, except as provided for MVACs in Subpart B. [40 C.F.R. § 82 Subpart F]

a. Persons opening appliances for maintenance, service, repair, or disposal must comply with the required practices pursuant to §82.156.
b. Equipment used during the maintenance, service, repair, or disposal of appliances must comply with the standards for recycling and recovery equipment pursuant to §82.158.
c. Persons performing maintenance, service repair, or disposal of appliances must be certified by an approved technician certification program pursuant to §82.161.
d. Persons disposing of small appliances, MVACs, and MVAC like appliances must comply with record keeping requirements pursuant to §82.166. ("MVAC like appliance" as defined at §82.152)
e. Persons owning commercial or industrial process refrigeration equipment must comply with leak repair requirements pursuant to §82.156.
f. Owners/operators of appliances normally containing 50 or more pounds of refrigerant must keep records of refrigerant purchased and added to such appliances pursuant to §82.166.

If the permittee manufactures, transforms, destroys, imports, or exports a class I or class II substance, the permittee is subject to all requirements as specified in 40 CFR Part 82, Subpart A, Production and Consumption Controls.

If the permittee performs a service on motor (fleet) vehicles when this service involves ozone depleting substance refrigerant (or regulated substitute substance) in the motor vehicle air conditioner (MVAC), the permittee is subject to all the applicable requirements as specified in 40 CFR part 82, Subpart B, Servicing of Motor Vehicle Air Conditioners.

The term “motor vehicle” as used in Subpart B does not include a vehicle in which final assembly of the vehicle has not been completed. The term “MVAC” as used in Subpart B does not include the air tight sealed refrigeration system used as refrigerated cargo, or the system used on passenger buses using HCFC 22 refrigerant.

The permittee can switch from any ozone depleting substance to any alternative listed in the Significant New Alternatives Program (SNAP) promulgated pursuant to 40 CFR Part 82, Subpart G.
SECTION VII: INSIGNIFICANT ACTIVITIES

The Department deems the following types of activities or emissions as insignificant on the basis of size, emission rate, production rate, or activity in accordance with Group A of the Insignificant Activities list found in Regulation 18 and Regulation 19 Appendix A. Group B insignificant activities may be listed but are not required to be listed in permits. Insignificant activity emission determinations rely upon the information submitted by the permittee in an application dated January 8, 2020. [Reg.26.304 and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

SECTION VIII: GENERAL PROVISIONS

1. Any terms or conditions included in this permit which specify and reference Arkansas Pollution Control & Ecology Commission Regulation 18 or the Arkansas Water and Air Pollution Control Act (Ark. Code Ann. § 8-4-101 et seq.) as the sole origin of and authority for the terms or conditions are not required under the Clean Air Act or any of its applicable requirements, and are not federally enforceable under the Clean Air Act. Arkansas Pollution Control & Ecology Commission Regulation 18 was adopted pursuant to the Arkansas Water and Air Pollution Control Act (Ark. Code Ann. § 8-4-101 et seq.). Any terms or conditions included in this permit which specify and reference Arkansas Pollution Control & Ecology Commission Regulation 18 or the Arkansas Water and Air Pollution Control Act (Ark. Code Ann. § 8-4-101 et seq.) as the origin of and authority for the terms or conditions are enforceable under this Arkansas statute. [40 C.F.R. § 70.6(b)(2)]

2. This permit shall be valid for a period of five (5) years beginning on the date this permit becomes effective and ending five (5) years later. [40 C.F.R. § 70.6(a)(2) and Reg.26.701(B)]

3. The permittee must submit a complete application for permit renewal at least six (6) months before permit expiration. Permit expiration terminates the permittee’s right to operate unless the permittee submitted a complete renewal application at least six (6) months before permit expiration. If the permittee submits a complete application, the existing permit will remain in effect until the Department takes final action on the renewal application. The Department will not necessarily notify the permittee when the permit renewal application is due. [Reg.26.406]

4. Where an applicable requirement of the Clean Air Act, as amended, 42 U.S.C. 7401, et seq. (Act) is more stringent than an applicable requirement of regulations promulgated under Title IV of the Act, the permit incorporates both provisions into the permit, and the Director or the Administrator can enforce both provisions. [40 C.F.R. § 70.6(a)(1)(ii) and Reg.26.701(A)(2)]

5. The permittee must maintain the following records of monitoring information as required by this permit.

   a. The date, place as defined in this permit, and time of sampling or measurements;
   b. The date(s) analyses performed;
   c. The company or entity performing the analyses;
   d. The analytical techniques or methods used;
   e. The results of such analyses; and
   f. The operating conditions existing at the time of sampling or measurement.

   [40 C.F.R. § 70.6(a)(3)(ii)(A) and Reg.26.701(C)(2)]
6. The permittee must retain the records of all required monitoring data and support information for at least five (5) years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, and copies of all reports required by this permit. [40 C.F.R. § 70.6(a)(3)(ii)(B) and Reg.26.701(C)(2)(b)]

7. The permittee must submit reports of all required monitoring every six (6) months. If the permit establishes no other reporting period, the reporting period shall end on the last day of the month six months after the issuance of the initial Title V permit and every six months thereafter. The report is due on the first day of the second month after the end of the reporting period. The first report due after issuance of the initial Title V permit shall contain six months of data and each report thereafter shall contain 12 months of data. The report shall contain data for all monitoring requirements in effect during the reporting period. If a monitoring requirement is not in effect for the entire reporting period, only those months of data in which the monitoring requirement was in effect are required to be reported. The report must clearly identify all instances of deviations from permit requirements. A responsible official as defined in Reg.26.2 must certify all required reports. The permittee will send the reports to the address below:

Arkansas Department of Environmental Quality  
Office of Air Quality  
ATTN: Compliance Inspector Supervisor  
5301 Northshore Drive  
North Little Rock, AR  72118-5317  

[40 C.F.R. § 70.6(a)(3)(iii)(A) and Reg.26.701(C)(3)(a)]

8. The permittee shall report to the Department all deviations from permit requirements, including those attributable to upset conditions as defined in the permit.

a. For all upset conditions (as defined in Reg.19.601), the permittee will make an initial report to the Department by the next business day after the discovery of the occurrence. The initial report may be made by telephone and shall include:

i. The facility name and location;
ii. The process unit or emission source deviating from the permit limit;
iii. The permit limit, including the identification of pollutants, from which deviation occurs;
iv. The date and time the deviation started;
v. The duration of the deviation;
vi. The emissions during the deviation;
vii. The probable cause of such deviations;
viii. Any corrective actions or preventive measures taken or being taken to prevent such deviations in the future; and
ix. The name of the person submitting the report.

The permittee shall make a full report in writing to the Department within five (5) business days of discovery of the occurrence. The report must include, in addition to the information required by the initial report, a schedule of actions taken or planned to eliminate future occurrences and/or to minimize the amount the permit’s limits were exceeded and to reduce the length of time the limits were exceeded. The permittee may submit a full report in writing (by facsimile, overnight courier, or other means) by the next business day after discovery of the occurrence, and the report will serve as both the initial report and full report.

b. For all deviations, the permittee shall report such events in semi-annual reporting and annual certifications required in this permit. This includes all upset conditions reported in 8a above. The semi-annual report must include all the information as required by the initial and full reports required in 8a.

9. If any provision of the permit or the application thereof to any person or circumstance is held invalid, such invalidity will not affect other provisions or applications hereof which can be given effect without the invalid provision or application, and to this end, provisions of this Regulation are declared to be separable and severable. [40 C.F.R. § 70.6(a)(5), Reg.26.701(E), and Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

10. The permittee must comply with all conditions of this Part 70 permit. Any permit noncompliance with applicable requirements as defined in Regulation 26 constitutes a violation of the Clean Air Act, as amended, 42 U.S.C. § 7401, et seq. and is grounds for enforcement action; for permit termination, revocation and reissuance, for permit modification; or for denial of a permit renewal application. [40 C.F.R. § 70.6(a)(6)(i) and Reg.26.701(F)(1)]

11. It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity to maintain compliance with the conditions of this permit. [40 C.F.R. § 70.6(a)(6)(ii) and Reg.26.701(F)(2)]

12. The Department may modify, revoke, reopen and reissue the permit or terminate the permit for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition. [40 C.F.R. § 70.6(a)(6)(iii) and Reg.26.701(F)(3)]

13. This permit does not convey any property rights of any sort, or any exclusive privilege. [40 C.F.R. § 70.6(a)(6)(iv) and Reg.26.701(F)(4)]
14. The permittee must furnish to the Director, within the time specified by the Director, any information that the Director may request in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. Upon request, the permittee must also furnish to the Director copies of records required by the permit. For information the permittee claims confidentiality, the Department may require the permittee to furnish such records directly to the Director along with a claim of confidentiality. [40 C.F.R. § 70.6(a)(6)(v) and Reg.26.701(F)(5)]

15. The permittee must pay all permit fees in accordance with the procedures established in Regulation 9. [40 C.F.R. § 70.6(a)(7) and Reg.26.701(G)]

16. No permit revision shall be required, under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes for changes provided for elsewhere in this permit. [40 C.F.R. § 70.6(a)(8) and Reg.26.701(H)]

17. If the permit allows different operating scenarios, the permittee shall, contemporaneously with making a change from one operating scenario to another, record in a log at the permitted facility a record of the operational scenario. [40 C.F.R. § 70.6(a)(9)(i) and Reg.26.701(I)(1)]

18. The Administrator and citizens may enforce under the Act all terms and conditions in this permit, including any provisions designed to limit a source’s potential to emit, unless the Department specifically designates terms and conditions of the permit as being federally unenforceable under the Act or under any of its applicable requirements. [40 C.F.R. § 70.6(b) and Reg.26.702(A) and (B)]

19. Any document (including reports) required by this permit pursuant to 40 C.F.R. § 70 must contain a certification by a responsible official as defined in Reg.26.2. [40 C.F.R. § 70.6(c)(1) and Reg.26.703(A)]

20. The permittee must allow an authorized representative of the Department, upon presentation of credentials, to perform the following: [40 C.F.R. § 70.6(c)(2) and Reg.26.703(B)]

   a. Enter upon the permittee’s premises where the permitted source is located or emissions related activity is conducted, or where records must be kept under the conditions of this permit;
   b. Have access to and copy, at reasonable times, any records required under the conditions of this permit;
   c. Inspect at reasonable times any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under this permit; and
   d. As authorized by the Act, sample or monitor at reasonable times substances or parameters for assuring compliance with this permit or applicable requirements.
21. The permittee shall submit a compliance certification with the terms and conditions contained in the permit, including emission limitations, standards, or work practices. The permittee must submit the compliance certification annually. If the permit establishes no other reporting period, the reporting period shall end on the last day of the anniversary month of the initial Title V permit. The report is due on the first day of the second month after the end of the reporting period. The permittee must also submit the compliance certification to the Administrator as well as to the Department. All compliance certifications required by this permit must include the following: [40 C.F.R. § 70.6(c)(5) and Reg.26.703(E)(3)]

a. The identification of each term or condition of the permit that is the basis of the certification;
b. The compliance status;
c. Whether compliance was continuous or intermittent;
d. The method(s) used for determining the compliance status of the source, currently and over the reporting period established by the monitoring requirements of this permit; and
e. Such other facts as the Department may require elsewhere in this permit or by § 114(a)(3) and § 504(b) of the Act.

22. Nothing in this permit will alter or affect the following: [Reg.26.704(C)]

a. The provisions of Section 303 of the Act (emergency orders), including the authority of the Administrator under that section;
b. The liability of the permittee for any violation of applicable requirements prior to or at the time of permit issuance;
c. The applicable requirements of the acid rain program, consistent with § 408(a) of the Act; or
d. The ability of EPA to obtain information from a source pursuant to § 114 of the Act.

23. This permit authorizes only those pollutant emitting activities addressed in this permit. [Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311]

24. The permittee may request in writing and at least 15 days in advance of the deadline, an extension to any testing, compliance or other dates in this permit. No such extensions are authorized until the permittee receives written Department approval. The Department may grant such a request, at its discretion in the following circumstances:

a. Such an extension does not violate a federal requirement;
b. The permittee demonstrates the need for the extension; and

c. The permittee documents that all reasonable measures have been taken to meet the current deadline and documents reasons it cannot be met.
City of Fort Smith Sanitary Landfill
Permit #: 1791-AOP-R2
AFIN: 66-00226

25. The permittee may request in writing and at least 30 days in advance, temporary emissions and/or testing that would otherwise exceed an emission rate, throughput requirement, or other limit in this permit. No such activities are authorized until the permittee receives written Department approval. Any such emissions shall be included in the facility’s total emissions and reported as such. The Department may grant such a request, at its discretion under the following conditions:

a. Such a request does not violate a federal requirement;
b. Such a request is temporary in nature;
c. Such a request will not result in a condition of air pollution;
d. The request contains such information necessary for the Department to evaluate the request, including but not limited to, quantification of such emissions and the date/time such emission will occur;
e. Such a request will result in increased emissions less than five tons of any individual criteria pollutant, one ton of any single HAP and 2.5 tons of total HAPs; and
f. The permittee maintains records of the dates and results of such temporary emissions/testing.

[Reg.18.314(B), Reg.19.416(B), Reg.26.1013(B), Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311, and 40 C.F.R. § 52 Subpart E]

26. The permittee may request in writing and at least 30 days in advance, an alternative to the specified monitoring in this permit. No such alternatives are authorized until the permittee receives written Department approval. The Department may grant such a request, at its discretion under the following conditions:

a. The request does not violate a federal requirement;
b. The request provides an equivalent or greater degree of actual monitoring to the current requirements; and
c. Any such request, if approved, is incorporated in the next permit modification application by the permittee.

27. Any credible evidence based on sampling, monitoring, and reporting may be used to determine violations of applicable emission limitations. [Reg.18.1001, Reg.19.701, Ark. Code Ann. § 8-4-203 as referenced by Ark. Code Ann. §§ 8-4-304 and 8-4-311, and 40 C.F.R. § 52 Subpart E]
Appendix A
40 C.F.R. Part 60 Subpart WWW – Standards of Performance for Municipal Solid Waste Landfills
§60.750   Applicability, designation of affected facility, and delegation of authority.

(a) The provisions of this subpart apply to each municipal solid waste landfill that commenced construction, reconstruction, or modification on or after May 30, 1991, but before July 18, 2014.

(b) The following authorities shall be retained by the Administrator and not transferred to the State: §60.754(a)(5).

(c) Activities required by or conducted pursuant to a CERCLA, RCRA, or State remedial action are not considered construction, reconstruction, or modification for purposes of this subpart.

(d) An affected municipal solid waste landfill must continue to comply with this subpart until it:
(1) Becomes subject to the more stringent requirements in an approved and effective state or federal plan that implements subpart Cf of this part, or

(2) Modifies or reconstructs after July 17, 2014, and thus becomes subject to subpart XXX of this part.

§60.751 Definitions.

As used in this subpart, all terms not defined herein shall have the meaning given them in the Act or in subpart A of this part.

*Active collection system* means a gas collection system that uses gas mover equipment.

*Active landfill* means a landfill in which solid waste is being placed or a landfill that is planned to accept waste in the future.

*Closed landfill* means a landfill in which solid waste is no longer being placed, and in which no additional solid wastes will be placed without first filing a notification of modification as prescribed under §60.7(a)(4). Once a notification of modification has been filed, and additional solid waste is placed in the landfill, the landfill is no longer closed.

*Closure* means that point in time when a landfill becomes a closed landfill.

*Commercial solid waste* means all types of solid waste generated by stores, offices, restaurants, warehouses, and other nonmanufacturing activities, excluding residential and industrial wastes.

*Controlled landfill* means any landfill at which collection and control systems are required under this subpart as a result of the nonmethane organic compounds emission rate. The landfill is considered controlled at the time a collection and control system design plan is submitted in compliance with §60.752(b)(2)(i).

*Design capacity* means the maximum amount of solid waste a landfill can accept, as indicated in terms of volume or mass in the most recent permit issued by the State, local, or Tribal agency responsible for regulating the landfill, plus any in-place waste not accounted for in the most recent permit. If the owner or operator chooses to convert the design capacity from volume to mass or from mass to volume to demonstrate its design capacity is less than 2.5 million megagrams or 2.5 million cubic meters, the calculation must include a site specific density, which must be recalculated annually.

*Disposal facility* means all contiguous land and structures, other appurtenances, and improvements on the land used for the disposal of solid waste.
Emission rate cutoff means the threshold annual emission rate to which a landfill compares its estimated emission rate to determine if control under the regulation is required.

Enclosed combustor means an enclosed firebox which maintains a relatively constant limited peak temperature generally using a limited supply of combustion air. An enclosed flare is considered an enclosed combustor.

Flare means an open combustor without enclosure or shroud.

Gas mover equipment means the equipment (i.e., fan, blower, compressor) used to transport landfill gas through the header system.

Household waste means any solid waste (including garbage, trash, and sanitary waste in septic tanks) derived from households (including, but not limited to, single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds, and day-use recreation areas).

Industrial solid waste means solid waste generated by manufacturing or industrial processes that is not a hazardous waste regulated under Subtitle C of the Resource Conservation and Recovery Act, parts 264 and 265 of this title. Such waste may include, but is not limited to, waste resulting from the following manufacturing processes: electric power generation; fertilizer/agricultural chemicals; food and related products/by-products; inorganic chemicals; iron and steel manufacturing; leather and leather products; nonferrous metals manufacturing/foundries; organic chemicals; plastics and resins manufacturing; pulp and paper industry; rubber and miscellaneous plastic products; stone, glass, clay, and concrete products; textile manufacturing; transportation equipment; and water treatment. This term does not include mining waste or oil and gas waste.

Interior well means any well or similar collection component located inside the perimeter of the landfill waste. A perimeter well located outside the landfilled waste is not an interior well.

Landfill means an area of land or an excavation in which wastes are placed for permanent disposal, and that is not a land application unit, surface impoundment, injection well, or waste pile as those terms are defined under §257.2 of this title.

Lateral expansion means a horizontal expansion of the waste boundaries of an existing MSW landfill. A lateral expansion is not a modification unless it results in an increase in the design capacity of the landfill.

Modification means an increase in the permitted volume design capacity of the landfill by either horizontal or vertical expansion based on its permitted design capacity as of May 30, 1991. Modification does not occur until the owner or operator commences construction on the horizontal or vertical expansion.

Municipal solid waste landfill or MSW landfill means an entire disposal facility in a contiguous geographical space where household waste is placed in or on land. An MSW landfill may also receive other types of RCRA Subtitle D wastes (§257.2 of this title) such as...
commercial solid waste, nonhazardous sludge, conditionally exempt small quantity generator waste, and industrial solid waste. Portions of an MSW landfill may be separated by access roads. An MSW landfill may be publicly or privately owned. An MSW landfill may be a new MSW landfill, an existing MSW landfill, or a lateral expansion.

**Municipal solid waste landfill emissions** or **MSW landfill emissions** means gas generated by the decomposition of organic waste deposited in an MSW landfill or derived from the evolution of organic compounds in the waste.

**NMOC** means nonmethane organic compounds, as measured according to the provisions of §60.754.

**Nondegradable waste** means any waste that does not decompose through chemical breakdown or microbiological activity. Examples are, but are not limited to, concrete, municipal waste combustor ash, and metals.

**Passive collection system** means a gas collection system that solely uses positive pressure within the landfill to move the gas rather than using gas mover equipment.

**Sludge** means any solid, semisolid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility, exclusive of the treated effluent from a wastewater treatment plant.

**Solid waste** means any garbage, sludge from a wastewater treatment plant, water supply treatment plant, or air pollution control facility and other discarded material, including solid, liquid, semisolid, or contained gaseous material resulting from industrial, commercial, mining, and agricultural operations, and from community activities, but does not include solid or dissolved material in domestic sewage, or solid or dissolved materials in irrigation return flows or industrial discharges that are point sources subject to permits under 33 U.S.C. 1342, or source, special nuclear, or by-product material as defined by the Atomic Energy Act of 1954, as amended (42 U.S.C 2011 et seq.).

**Sufficient density** means any number, spacing, and combination of collection system components, including vertical wells, horizontal collectors, and surface collectors, necessary to maintain emission and migration control as determined by measures of performance set forth in this part.

**Sufficient extraction rate** means a rate sufficient to maintain a negative pressure at all wellheads in the collection system without causing air infiltration, including any wellheads connected to the system as a result of expansion or excess surface emissions, for the life of the blower.

Back to Top

§60.752 Standards for air emissions from municipal solid waste landfills.
(a) Each owner or operator of an MSW landfill having a design capacity less than 2.5 million megagrams by mass or 2.5 million cubic meters by volume shall submit an initial design capacity report to the Administrator as provided in §60.757(a). The landfill may calculate design capacity in either megagrams or cubic meters for comparison with the exemption values. Any density conversions shall be documented and submitted with the report. Submission of the initial design capacity report shall fulfill the requirements of this subpart except as provided for in paragraphs (a)(1) and (a)(2) of this section.

(1) The owner or operator shall submit to the Administrator an amended design capacity report, as provided for in §60.757(a)(3).

(2) When an increase in the maximum design capacity of a landfill exempted from the provisions of §§60.752(b) through 60.759 of this subpart on the basis of the design capacity exemption in paragraph (a) of this section results in a revised maximum design capacity equal to or greater than 2.5 million megagrams and 2.5 million cubic meters, the owner or operator shall comply with the provisions of paragraph (b) of this section.

(b) Each owner or operator of an MSW landfill having a design capacity equal to or greater than 2.5 million megagrams and 2.5 million cubic meters, shall either comply with paragraph (b)(2) of this section or calculate an NMOC emission rate for the landfill using the procedures specified in §60.754. The NMOC emission rate shall be recalculated annually, except as provided in §60.757(b)(1)(ii) of this subpart. The owner or operator of an MSW landfill subject to this subpart with a design capacity greater than or equal to 2.5 million megagrams and 2.5 million cubic meters is subject to part 70 or 71 permitting requirements.

(1) If the calculated NMOC emission rate is less than 50 megagrams per year, the owner or operator shall:

   (i) Submit an annual emission report to the Administrator, except as provided for in §60.757(b)(1)(ii); and

   (ii) Recalculate the NMOC emission rate annually using the procedures specified in §60.754(a)(1) until such time as the calculated NMOC emission rate is equal to or greater than 50 megagrams per year, or the landfill is closed.

(A) If the NMOC emission rate, upon recalculation required in paragraph (b)(1)(ii) of this section, is equal to or greater than 50 megagrams per year, the owner or operator shall install a collection and control system in compliance with paragraph (b)(2) of this section.

(B) If the landfill is permanently closed, a closure notification shall be submitted to the Administrator as provided for in §60.757(d).

(2) If the calculated NMOC emission rate is equal to or greater than 50 megagrams per year, the owner or operator shall:

   (i) Submit a collection and control system design plan prepared by a professional engineer to the Administrator within 1 year:
(A) The collection and control system as described in the plan shall meet the design requirements of paragraph (b)(2)(ii) of this section.

(B) The collection and control system design plan shall include any alternatives to the operational standards, test methods, procedures, compliance measures, monitoring, recordkeeping or reporting provisions of §§60.753 through 60.758 proposed by the owner or operator.

(C) The collection and control system design plan shall either conform with specifications for active collection systems in §60.759 or include a demonstration to the Administrator's satisfaction of the sufficiency of the alternative provisions to §60.759.

(D) The Administrator shall review the information submitted under paragraphs (b)(2)(i)(A),(B) and (C) of this section and either approve it, disapprove it, or request that additional information be submitted. Because of the many site-specific factors involved with landfill gas system design, alternative systems may be necessary. A wide variety of system designs are possible, such as vertical wells, combination horizontal and vertical collection systems, or horizontal trenches only, leachate collection components, and passive systems.

(ii) Install a collection and control system that captures the gas generated within the landfill as required by paragraphs (b)(2)(ii)(A) or (B) and (b)(2)(iii) of this section within 30 months after the first annual report in which the emission rate equals or exceeds 50 megagrams per year, unless Tier 2 or Tier 3 sampling demonstrates that the emission rate is less than 50 megagrams per year, as specified in §60.757(c)(1) or (2).

(A) An active collection system shall:

(1) Be designed to handle the maximum expected gas flow rate from the entire area of the landfill that warrants control over the intended use period of the gas control or treatment system equipment;

(2) Collect gas from each area, cell, or group of cells in the landfill in which the initial solid waste has been placed for a period of:

(i) 5 years or more if active; or

(ii) 2 years or more if closed or at final grade.

(3) Collect gas at a sufficient extraction rate;

(4) Be designed to minimize off-site migration of subsurface gas.

(B) A passive collection system shall:

(1) Comply with the provisions specified in paragraphs (b)(2)(ii)(A)(1), (2), and (2)(ii)(A) (4) of this section.

(2) Be installed with liners on the bottom and all sides in all areas in which gas is to be collected. The liners shall be installed as required under §258.40.
collected. The liners shall be installed as required under §258.40.

(iii) Route all the collected gas to a control system that complies with the requirements in either paragraph (b)(2)(iii) (A), (B) or (C) of this section.

(A) An open flare designed and operated in accordance with §60.18 except as noted in §60.754(e);

(B) A control system designed and operated to reduce NMOC by 98 weight-percent, or, when an enclosed combustion device is used for control, to either reduce NMOC by 98 weight percent or reduce the outlet NMOC concentration to less than 20 parts per million by volume, dry basis as hexane at 3 percent oxygen. The reduction efficiency or parts per million by volume shall be established by an initial performance test to be completed no later than 180 days after the initial startup of the approved control system using the test methods specified in §60.754(d).

(1) If a boiler or process heater is used as the control device, the landfill gas stream shall be introduced into the flame zone.

(2) The control device shall be operated within the parameter ranges established during the initial or most recent performance test. The operating parameters to be monitored are specified in §60.756;

(C) Route the collected gas to a treatment system that processes the collected gas for subsequent sale or use. All emissions from any atmospheric vent from the gas treatment system shall be subject to the requirements of paragraph (b)(2)(iii) (A) or (B) of this section.

(iv) Operate the collection and control device installed to comply with this subpart in accordance with the provisions of §§60.753, 60.755 and 60.756.

(v) The collection and control system may be capped or removed provided that all the conditions of paragraphs (b)(2)(v) (A), (B), and (C) of this section are met:

(A) The landfill shall be a closed landfill as defined in §60.751 of this subpart. A closure report shall be submitted to the Administrator as provided in §60.757(d);

(B) The collection and control system shall have been in operation a minimum of 15 years; and

(C) Following the procedures specified in §60.754(b) of this subpart, the calculated NMOC gas produced by the landfill shall be less than 50 megagrams per year on three successive test dates. The test dates shall be no less than 90 days apart, and no more than 180 days apart.

(c) For purposes of obtaining an operating permit under title V of the Act, the owner or operator of a MSW landfill subject to this subpart with a design capacity less than 2.5 million megagrams or 2.5 million cubic meters is not subject to the requirement to obtain an operating permit for the landfill under part 70 or 71 of this chapter, unless the landfill is otherwise subject to either part 70 or 71. For purposes of submitting a timely application for an operating permit under part 70 or 71, the owner or operator of a MSW landfill subject to
this subpart with a design capacity greater than or equal to 2.5 million megagrams and 2.5 million cubic meters, and not otherwise subject to either part 70 or 71, becomes subject to the requirements of §§70.5(a)(1)(i) or 71.5(a)(1)(i) of this chapter, regardless of when the design capacity report is actually submitted, no later than:

(1) June 10, 1996 for MSW landfills that commenced construction, modification, or reconstruction on or after May 30, 1991 but before March 12, 1996;

(2) Ninety days after the date of commenced construction, modification, or reconstruction for MSW landfills that commence construction, modification, or reconstruction on or after March 12, 1996.

(d) When a MSW landfill subject to this subpart is closed, the owner or operator is no longer subject to the requirement to maintain an operating permit under part 70 or 71 of this chapter for the landfill if the landfill is not otherwise subject to the requirements of either part 70 or 71 and if either of the following conditions are met:

(1) The landfill was never subject to the requirement for a control system under paragraph (b)(2) of this section; or

(2) The owner or operator meets the conditions for control system removal specified in paragraph (b)(2)(v) of this section.

§60.753 Operational standards for collection and control systems.

Each owner or operator of an MSW landfill with a gas collection and control system used to comply with the provisions of §60.752(b)(2)(ii) of this subpart shall:

(a) Operate the collection system such that gas is collected from each area, cell, or group of cells in the MSW landfill in which solid waste has been in place for:

(1) 5 years or more if active; or

(2) 2 years or more if closed or at final grade;

(b) Operate the collection system with negative pressure at each wellhead except under the following conditions:

(1) A fire or increased well temperature. The owner or operator shall record instances when positive pressure occurs in efforts to avoid a fire. These records shall be submitted with the annual reports as provided in §60.757(f)(1);

(2) Use of a geomembrane or synthetic cover. The owner or operator shall develop acceptable pressure limits in the design plan;
(3) A decommissioned well. A well may experience a static positive pressure after shut down to accommodate for declining flows. All design changes shall be approved by the Administrator;

(c) Operate each interior wellhead in the collection system with a landfill gas temperature less than 55 °C and with either a nitrogen level less than 20 percent or an oxygen level less than 5 percent. The owner or operator may establish a higher operating temperature, nitrogen, or oxygen value at a particular well. A higher operating value demonstration shall show supporting data that the elevated parameter does not cause fires or significantly inhibit anaerobic decomposition by killing methanogens.

(1) The nitrogen level shall be determined using Method 3C, unless an alternative test method is established as allowed by §60.752(b)(2)(i) of this subpart.

(2) Unless an alternative test method is established as allowed by §60.752(b)(2)(i) of this subpart, the oxygen shall be determined by an oxygen meter using Method 3A or 3C except that:

(i) The span shall be set so that the regulatory limit is between 20 and 50 percent of the span;

(ii) A data recorder is not required;

(iii) Only two calibration gases are required, a zero and span, and ambient air may be used as the span;

(iv) A calibration error check is not required;

(v) The allowable sample bias, zero drift, and calibration drift are ±10 percent.

(d) Operate the collection system so that the methane concentration is less than 500 parts per million above background at the surface of the landfill. To determine if this level is exceeded, the owner or operator shall conduct surface testing around the perimeter of the collection area and along a pattern that traverses the landfill at 30 meter intervals and where visual observations indicate elevated concentrations of landfill gas, such as distressed vegetation and cracks or seeps in the cover. The owner or operator may establish an alternative traversing pattern that ensures equivalent coverage. A surface monitoring design plan shall be developed that includes a topographical map with the monitoring route and the rationale for any site-specific deviations from the 30 meter intervals. Areas with steep slopes or other dangerous areas may be excluded from the surface testing.

(e) Operate the system such that all collected gases are vented to a control system designed and operated in compliance with §60.752(b)(2)(iii). In the event the collection or control system is inoperable, the gas mover system shall be shut down and all valves in the collection and control system contributing to venting of the gas to the atmosphere shall be closed within 1 hour; and
(f) Operate the control or treatment system at all times when the collected gas is routed to the system.

(g) If monitoring demonstrates that the operational requirements in paragraphs (b), (c), or (d) of this section are not met, corrective action shall be taken as specified in §60.755(a)(3) through (5) or §60.755(c) of this subpart. If corrective actions are taken as specified in §60.755, the monitored exceedance is not a violation of the operational requirements in this section.

§60.754 Test methods and procedures.

(a)(1) The landfill owner or operator shall calculate the NMOC emission rate using either the equation provided in paragraph (a)(1)(i) of this section or the equation provided in paragraph (a)(1)(ii) of this section. Both equations may be used if the actual year-to-year solid waste acceptance rate is known, as specified in paragraph (a)(1)(i), for part of the life of the landfill and the actual year-to-year solid waste acceptance rate is unknown, as specified in paragraph (a)(1)(ii), for part of the life of the landfill. The values to be used in both equations are 0.05 per year for k, 170 cubic meters per megagram for L_o, and 4,000 parts per million by volume as hexane for the C_NMOC. For landfills located in geographical areas with a thirty year annual average precipitation of less than 25 inches, as measured at the nearest representative official meteorologic site, the k value to be used is 0.02 per year.

(i) The following equation shall be used if the actual year-to-year solid waste acceptance rate is known.

\[
M_{\text{NMOC}} = \sum_{i=1}^{n} 2 \times k \times L_o \times M_i \left( e^{-k \times t_i} \right) \times C_{\text{NMOC}} \times (3.6 \times 10^{-9})
\]

where,

\[M_{\text{NMOC}} = \text{Total NMOC emission rate from the landfill, megagrams per year}\]

\[k = \text{methane generation rate constant, year}^{-1}\]

\[L_o = \text{methane generation potential, cubic meters per megagram solid waste}\]

\[M_i = \text{mass of solid waste in the } i^{th} \text{ section, megagrams}\]

\[t_i = \text{age of the } i^{th} \text{ section, years}\]

\[C_{\text{NMOC}} = \text{concentration of NMOC, parts per million by volume as hexane}\]

\[3.6 \times 10^{-9} = \text{conversion factor}\]
The mass of nondegradable solid waste may be subtracted from the total mass of solid waste in a particular section of the landfill when calculating the value for \( M_i \) if documentation of the nature and amount of such wastes is maintained.

(ii) The following equation shall be used if the actual year-to-year solid waste acceptance rate is unknown.

\[
M_{NMOC} = 2L_o R (e^{-kc} - e^{-kt}) C_{NMOC} \left(3.6 \times 10^{-9}\right)
\]

Where:

- \( M_{NMOC} \) = mass emission rate of NMOC, megagrams per year
- \( L_o \) = methane generation potential, cubic meters per megagram solid waste
- \( R \) = average annual acceptance rate, megagrams per year
- \( k \) = methane generation rate constant, year\(^{-1}\)
- \( t \) = age of landfill, years
- \( C_{NMOC} \) = concentration of NMOC, parts per million by volume as hexane
- \( c \) = time since closure, years; for active landfill \( c = 0 \) and \( e^{-kc} = 1 \)
- \( 3.6 \times 10^{-9} \) = conversion factor

The mass of nondegradable solid waste may be subtracted from the total mass of solid waste in a particular section of the landfill when calculating the value of \( R \), if documentation of the nature and amount of such wastes is maintained.

(2) **Tier 1.** The owner or operator shall compare the calculated NMOC mass emission rate to the standard of 50 megagrams per year.

(i) If the NMOC emission rate calculated in paragraph (a)(1) of this section is less than 50 megagrams per year, then the landfill owner shall submit an emission rate report as provided in §60.757(b)(1), and shall recalculate the NMOC mass emission rate annually as required under §60.752(b)(1).

(ii) If the calculated NMOC emission rate is equal to or greater than 50 megagrams per year, then the landfill owner shall either comply with §60.752(b)(2), or determine a site-specific NMOC concentration and recalculate the NMOC emission rate using the procedures provided in paragraph (a)(3) of this section.

(3) **Tier 2.** The landfill owner or operator shall determine the NMOC concentration using the following sampling procedure. The landfill owner or operator shall install at least two sample probes per hectare of landfill surface that has retained waste for at least 2 years. If the landfill is larger than 25 hectares in area, only 50 samples are required. The sample probes should be located to avoid known areas of nondegradable solid waste. The owner or operator shall collect and analyze one sample of landfill gas from each probe to determine the NMOC concentration using Method 25 or 25C of appendix A of this part. Method 18 of appendix A of this part may be used to analyze the samples collected by the Method 25 or 25C sampling procedure. Taking composite samples from different probes into a single
25C sampling procedure. Taking composite samples from different probes into a single cylinder is allowed; however, equal sample volumes must be taken from each probe. For each composite, the sampling rate, collection times, beginning and ending cylinder vacuums, or alternative volume measurements must be recorded to verify that composite volumes are equal. Composite sample volumes should not be less than one liter unless evidence can be provided to substantiate the accuracy of smaller volumes. Terminate compositing before the cylinder approaches ambient pressure where measurement accuracy diminishes. If using Method 18, the owner or operator must identify all compounds in the sample and, as a minimum, test for those compounds published in the most recent Compilation of Air Pollutant Emission Factors (AP-42), minus carbon monoxide, hydrogen sulfide, and mercury. As a minimum, the instrument must be calibrated for each of the compounds on the list. Convert the concentration of each Method 18 compound to \( C_{\text{NMOC}} \) as hexane by multiplying by the ratio of its carbon atoms divided by six. If more than the required number of samples are taken, all samples must be used in the analysis. The landfill owner or operator must divide the NMOC concentration from Method 25 or 25C of appendix A of this part by six to convert from \( C_{\text{NMOC}} \) as carbon to \( C_{\text{NMOC}} \) as hexane. If the landfill has an active or passive gas removal system in place, Method 25 or 25C samples may be collected from these systems instead of surface probes provided the removal system can be shown to provide sampling as representative as the two sampling probe per hectare requirement. For active collection systems, samples may be collected from the common header pipe before the gas moving or condensate removal equipment. For these systems, a minimum of three samples must be collected from the header pipe.

(i) The landfill owner or operator shall recalculate the NMOC mass emission rate using the equations provided in paragraph (a)(1)(i) or (a)(1)(ii) of this section and using the average NMOC concentration from the collected samples instead of the default value in the equation provided in paragraph (a)(1) of this section.

(ii) If the resulting mass emission rate calculated using the site-specific NMOC concentration is equal to or greater than 50 megagrams per year, then the landfill owner or operator shall either comply with §60.752(b)(2), or determine the site-specific methane generation rate constant and recalculate the NMOC emission rate using the site-specific methane generation rate using the procedure specified in paragraph (a)(4) of this section.

(iii) If the resulting NMOC mass emission rate is less than 50 megagrams per year, the owner or operator shall submit a periodic estimate of the emission rate report as provided in §60.757(b)(1) and retest the site-specific NMOC concentration every 5 years using the methods specified in this section.

(4) Tier 3. The site-specific methane generation rate constant shall be determined using the procedures provided in Method 2E of appendix A of this part. The landfill owner or operator shall estimate the NMOC mass emission rate using equations in paragraph (a)(1)(i) or (a)(1)(ii) of this section and using a site-specific methane generation rate constant \( k \), and the site-specific NMOC concentration as determined in paragraph (a)(3) of this section instead of the default values provided in paragraph (a)(1) of this section. The landfill owner or operator shall compare the resulting NMOC mass emission rate to the standard of 50 megagrams per year.
(i) If the NMOC mass emission rate as calculated using the site-specific methane generation rate and concentration of NMOC is equal to or greater than 50 megagrams per year, the owner or operator shall comply with §60.752(b)(2).

(ii) If the NMOC mass emission rate is less than 50 megagrams per year, then the owner or operator shall submit a periodic emission rate report as provided in §60.757(b)(1) and shall recalculate the NMOC mass emission rate annually, as provided in §60.757(b)(1) using the equations in paragraph (a)(1) of this section and using the site-specific methane generation rate constant and NMOC concentration obtained in paragraph (a)(3) of this section. The calculation of the methane generation rate constant is performed only once, and the value obtained from this test shall be used in all subsequent annual NMOC emission rate calculations.

(5) The owner or operator may use other methods to determine the NMOC concentration or a site-specific k as an alternative to the methods required in paragraphs (a)(3) and (a)(4) of this section if the method has been approved by the Administrator.

(b) After the installation of a collection and control system in compliance with §60.755, the owner or operator shall calculate the NMOC emission rate for purposes of determining when the system can be removed as provided in §60.752(b)(2)(v), using the following equation:

\[ M_{\text{NMOC}} = 1.89 \times 10^{-3} Q_{\text{LFG}} C_{\text{NMOC}} \]

where,

\[ M_{\text{NMOC}} = \text{mass emission rate of NMOC, megagrams per year} \]
\[ Q_{\text{LFG}} = \text{flow rate of landfill gas, cubic meters per minute} \]
\[ C_{\text{NMOC}} = \text{NMOC concentration, parts per million by volume as hexane} \]

(1) The flow rate of landfill gas, \( Q_{\text{LFG}} \), shall be determined by measuring the total landfill gas flow rate at the common header pipe that leads to the control device using a gas flow measuring device calibrated according to the provisions of section 4 of Method 2E of appendix A of this part.

(2) The average NMOC concentration, \( C_{\text{NMOC}} \), shall be determined by collecting and analyzing landfill gas sampled from the common header pipe before the gas moving or condensate removal equipment using the procedures in Method 25C or Method 18 of appendix A of this part. If using Method 18 of appendix A of this part, the minimum list of compounds to be tested shall be those published in the most recent Compilation of Air Pollutant Emission Factors (AP-42). The sample location on the common header pipe shall be before any condensate removal or other gas refining units. The landfill owner or operator shall divide the NMOC concentration from Method 25C of appendix A of this part by six to convert from \( C_{\text{NMOC}} \) as carbon to \( C_{\text{NMOC}} \) as hexane.

(3) The owner or operator may use another method to determine landfill gas flow rate and NMOC concentration if the method has been approved by the Administrator.
(c) When calculating emissions for PSD purposes, the owner or operator of each MSW landfill subject to the provisions of this subpart shall estimate the NMOC emission rate for comparison to the PSD major source and significance levels in §§51.166 or 52.21 of this chapter using AP-42 or other approved measurement procedures.

(d) For the performance test required in §60.752(b)(2)(iii)(B), Method 25, 25C, or Method 18 of appendix A of this part must be used to determine compliance with the 98 weight-percent efficiency or the 20 ppmv outlet concentration level, unless another method to demonstrate compliance has been approved by the Administrator as provided by §60.752(b)(2)(i)(B). Method 3 or 3A shall be used to determine oxygen for correcting the NMOC concentration as hexane to 3 percent. In cases where the outlet concentration is less than 50 ppm NMOC as carbon (8 ppm NMOC as hexane), Method 25A should be used in place of Method 25. If using Method 18 of appendix A of this part, the minimum list of compounds to be tested shall be those published in the most recent Compilation of Air Pollutant Emission Factors (AP-42). The following equation shall be used to calculate efficiency:

\[
\text{Control Efficiency} = \frac{(\text{NMOC}_{\text{in}} - \text{NMOC}_{\text{out}})}{(\text{NMOC}_{\text{in}})}
\]

where,

- \(\text{NMOC}_{\text{in}}\) = mass of NMOC entering control device
- \(\text{NMOC}_{\text{out}}\) = mass of NMOC exiting control device

(e) For the performance test required in §60.752(b)(2)(iii)(A), the net heating value of the combusted landfill gas as determined in §60.18(f)(3) is calculated from the concentration of methane in the landfill gas as measured by Method 3C. A minimum of three 30-minute Method 3C samples are determined. The measurement of other organic components, hydrogen, and carbon monoxide is not applicable. Method 3C may be used to determine the landfill gas molecular weight for calculating the flare gas exit velocity under §60.18(f)(4).

equipment. The active life of the landfill is the age of the landfill plus the estimated number of years until closure.

(i) For sites with unknown year-to-year solid waste acceptance rate:

\[ Q_m = 2L_o \cdot R \left( e^{-k_c} - e^{-k_t} \right) \]

where,

- \( Q_m \) = maximum expected gas generation flow rate, cubic meters per year
- \( L_o \) = methane generation potential, cubic meters per megagram solid waste
- \( R \) = average annual acceptance rate, megagrams per year
- \( k \) = methane generation rate constant, year\(^{-1}\)
- \( t \) = age of the landfill at equipment installation plus the time the owner or operator intends to use the gas mover equipment or active life of the landfill, whichever is less. If the equipment is installed after closure, \( t \) is the age of the landfill at installation, years
- \( c \) = time since closure, years (for an active landfill \( c = 0 \) and \( e^{-k_c} = 1 \))

(ii) For sites with known year-to-year solid waste acceptance rate:

\[ Q_M = \sum_{i=1}^{n} 2kL_oM_i e^{-k t_i} \]

where,

- \( Q_M \) = maximum expected gas generation flow rate, cubic meters per year
- \( k \) = methane generation rate constant, year\(^{-1}\)
- \( L_o \) = methane generation potential, cubic meters per megagram solid waste
- \( M_i \) = mass of solid waste in the \( i^{th} \) section, megagrams
- \( t_i \) = age of the \( i^{th} \) section, years

(iii) If a collection and control system has been installed, actual flow data may be used to project the maximum expected gas generation flow rate instead of, or in conjunction with, the equations in paragraphs (a)(1) (i) and (ii) of this section. If the landfill is still accepting waste, the actual measured flow data will not equal the maximum expected gas generation rate, so calculations using the equations in paragraphs (a)(1) (i) or (ii) or other methods shall be used to predict the maximum expected gas generation rate over the intended period of use of the gas control system equipment.

(2) For the purposes of determining sufficient density of gas collectors for compliance with §60.752(b)(2)(ii)(A)(2), the owner or operator shall design a system of vertical wells, horizontal collectors, or other collection devices, satisfactory to the Administrator, capable of
controlling and extracting gas from all portions of the landfill sufficient to meet all operational and performance standards.

(3) For the purpose of demonstrating whether the gas collection system flow rate is sufficient to determine compliance with §60.752(b)(2)(ii)(A)(3), the owner or operator shall measure gauge pressure in the gas collection header at each individual well, monthly. If a positive pressure exists, action shall be initiated to correct the exceedance within 5 calendar days, except for the three conditions allowed under §60.753(b). If negative pressure cannot be achieved without excess air infiltration within 15 calendar days of the first measurement, the gas collection system shall be expanded to correct the exceedance within 120 days of the initial measurement of positive pressure. Any attempted corrective measure shall not cause exceedances of other operational or performance standards. An alternative timeline for correcting the exceedance may be submitted to the Administrator for approval.

(4) Owners or operators are not required to expand the system as required in paragraph (a)(3) of this section during the first 180 days after gas collection system startup.

(5) For the purpose of identifying whether excess air infiltration into the landfill is occurring, the owner or operator shall monitor each well monthly for temperature and nitrogen or oxygen as provided in §60.753(c). If a well exceeds one of these operating parameters, action shall be initiated to correct the exceedance within 5 calendar days. If correction of the exceedance cannot be achieved within 15 calendar days of the first measurement, the gas collection system shall be expanded to correct the exceedance within 120 days of the initial exceedance. Any attempted corrective measure shall not cause exceedances of other operational or performance standards. An alternative timeline for correcting the exceedance may be submitted to the Administrator for approval.

(6) An owner or operator seeking to demonstrate compliance with §60.752(b)(2)(ii)(A)(4) through the use of a collection system not conforming to the specifications provided in §60.759 shall provide information satisfactory to the Administrator as specified in §60.752(b)(2)(i)(C) demonstrating that off-site migration is being controlled.

(b) For purposes of compliance with §60.753(a), each owner or operator of a controlled landfill shall place each well or design component as specified in the approved design plan as provided in §60.752(b)(2)(i). Each well shall be installed no later than 60 days after the date on which the initial solid waste has been in place for a period of:

(1) 5 years or more if active; or

(2) 2 years or more if closed or at final grade.

(c) The following procedures shall be used for compliance with the surface methane operational standard as provided in §60.753(d).

(1) After installation of the collection system, the owner or operator shall monitor surface concentrations of methane along the entire perimeter of the collection area and along a pattern that traverses the landfill at 30 meter intervals (or a site-specific established spacing) for each collection area on a quarterly basis using an organic vapor analyzer, flame ionization...
detector, or other portable monitor meeting the specifications provided in paragraph (d) of this section.

(2) The background concentration shall be determined by moving the probe inlet upwind and downwind outside the boundary of the landfill at a distance of at least 30 meters from the perimeter wells.

(3) Surface emission monitoring shall be performed in accordance with section 4.3.1 of Method 21 of appendix A of this part, except that the probe inlet shall be placed within 5 to 10 centimeters of the ground. Monitoring shall be performed during typical meteorological conditions.

(4) Any reading of 500 parts per million or more above background at any location shall be recorded as a monitored exceedance and the actions specified in paragraphs (c)(4)(i) through (v) of this section shall be taken. As long as the specified actions are taken, the exceedance is not a violation of the operational requirements of §60.753(d).

(i) The location of each monitored exceedance shall be marked and the location recorded.

(ii) Cover maintenance or adjustments to the vacuum of the adjacent wells to increase the gas collection in the vicinity of each exceedance shall be made and the location shall be re-monitored within 10 calendar days of detecting the exceedance.

(iii) If the re-monitoring of the location shows a second exceedance, additional corrective action shall be taken and the location shall be monitored again within 10 days of the second exceedance. If the re-monitoring shows a third exceedance for the same location, the action specified in paragraph (c)(4)(v) of this section shall be taken, and no further monitoring of that location is required until the action specified in paragraph (c)(4)(v) has been taken.

(iv) Any location that initially showed an exceedance but has a methane concentration less than 500 ppm methane above background at the 10-day re-monitoring specified in paragraph (c)(4)(ii) or (iii) of this section shall be re-monitored 1 month from the initial exceedance. If the 1-month remonitoring shows a concentration less than 500 parts per million above background, no further monitoring of that location is required until the next quarterly monitoring period. If the 1-month remonitoring shows an exceedance, the actions specified in paragraph (c)(4)(v) shall be taken.

(v) For any location where monitored methane concentration equals or exceeds 500 parts per million above background three times within a quarterly period, a new well or other collection device shall be installed within 120 calendar days of the initial exceedance. An alternative remedy to the exceedance, such as upgrading the blower, header pipes or control device, and a corresponding timeline for installation may be submitted to the Administrator for approval.

(5) The owner or operator shall implement a program to monitor for cover integrity and implement cover repairs as necessary on a monthly basis.
(d) Each owner or operator seeking to comply with the provisions in paragraph (c) of this section shall comply with the following instrumentation specifications and procedures for surface emission monitoring devices:

(1) The portable analyzer shall meet the instrument specifications provided in section 3 of Method 21 of appendix A of this part, except that “methane” shall replace all references to VOC.

(2) The calibration gas shall be methane, diluted to a nominal concentration of 500 parts per million in air.

(3) To meet the performance evaluation requirements in section 3.1.3 of Method 21 of appendix A of this part, the instrument evaluation procedures of section 4.4 of Method 21 of appendix A of this part shall be used.

(4) The calibration procedures provided in section 4.2 of Method 21 of appendix A of this part shall be followed immediately before commencing a surface monitoring survey.

(e) The provisions of this subpart apply at all times, except during periods of start-up, shutdown, or malfunction, provided that the duration of start-up, shutdown, or malfunction shall not exceed 5 days for collection systems and shall not exceed 1 hour for treatment or control devices.

§60.756 Monitoring of operations.

Except as provided in §60.752(b)(2)(i)(B),

(a) Each owner or operator seeking to comply with §60.752(b)(2)(ii)(A) for an active gas collection system shall install a sampling port and a thermometer, other temperature measuring device, or an access port for temperature measurements at each wellhead and:

(1) Measure the gauge pressure in the gas collection header on a monthly basis as provided in §60.755(a)(3); and

(2) Monitor nitrogen or oxygen concentration in the landfill gas on a monthly basis as provided in §60.755(a)(5); and

(3) Monitor temperature of the landfill gas on a monthly basis as provided in §60.755(a)(5).

(b) Each owner or operator seeking to comply with §60.752(b)(2)(iii) using an enclosed combustor shall calibrate, maintain, and operate according to the manufacturer's specifications, the following equipment.
(1) A temperature monitoring device equipped with a continuous recorder and having a minimum accuracy of ±1 percent of the temperature being measured expressed in degrees Celsius or ±0.5 degrees Celsius, whichever is greater. A temperature monitoring device is not required for boilers or process heaters with design heat input capacity equal to or greater than 44 megawatts.

(2) A device that records flow to or bypass of the control device. The owner or operator shall either:

(i) Install, calibrate, and maintain a gas flow rate measuring device that shall record the flow to the control device at least every 15 minutes; or

(ii) Secure the bypass line valve in the closed position with a car-seal or a lock-and-key type configuration. A visual inspection of the seal or closure mechanism shall be performed at least once every month to ensure that the valve is maintained in the closed position and that the gas flow is not diverted through the bypass line.

(c) Each owner or operator seeking to comply with §60.752(b)(2)(iii) using an open flare shall install, calibrate, maintain, and operate according to the manufacturer's specifications the following equipment:

(1) A heat sensing device, such as an ultraviolet beam sensor or thermocouple, at the pilot light or the flame itself to indicate the continuous presence of a flame.

(2) A device that records flow to or bypass of the flare. The owner or operator shall either:

(i) Install, calibrate, and maintain a gas flow rate measuring device that shall record the flow to the control device at least every 15 minutes; or

(ii) Secure the bypass line valve in the closed position with a car-seal or a lock-and-key type configuration. A visual inspection of the seal or closure mechanism shall be performed at least once every month to ensure that the valve is maintained in the closed position and that the gas flow is not diverted through the bypass line.

(d) Each owner or operator seeking to demonstrate compliance with §60.752(b)(2)(iii) using a device other than an open flare or an enclosed combustor shall provide information satisfactory to the Administrator as provided in §60.752(b)(2)(i)(B) describing the operation of the control device, the operating parameters that would indicate proper performance, and appropriate monitoring procedures. The Administrator shall review the information and either approve it, or request that additional information be submitted. The Administrator may specify additional appropriate monitoring procedures.

(e) Each owner or operator seeking to install a collection system that does not meet the specifications in §60.759 or seeking to monitor alternative parameters to those required by §§60.753 through 60.756 shall provide information satisfactory to the Administrator as provided in §60.752(b)(2)(i) (B) and (C) describing the design and operation of the collection system, the operating parameters that would indicate proper performance, and appropriate
monitoring procedures. The Administrator may specify additional appropriate monitoring procedures.

(f) Each owner or operator seeking to demonstrate compliance with §60.755(c), shall monitor surface concentrations of methane according to the instrument specifications and procedures provided in §60.755(d). Any closed landfill that has no monitored exceedances of the operational standard in three consecutive quarterly monitoring periods may skip to annual monitoring. Any methane reading of 500 ppm or more above background detected during the annual monitoring returns the frequency for that landfill to quarterly monitoring.

§60.757 Reporting requirements.

Except as provided in §60.752(b)(2)(i)(B),

(a) Each owner or operator subject to the requirements of this subpart shall submit an initial design capacity report to the Administrator.

(1) The initial design capacity report shall fulfill the requirements of the notification of the date construction is commenced as required by §60.7(a)(1) and shall be submitted no later than:

(i) June 10, 1996, for landfills that commenced construction, modification, or reconstruction on or after May 30, 1991 but before March 12, 1996 or

(ii) Ninety days after the date of commenced construction, modification, or reconstruction for landfills that commence construction, modification, or reconstruction on or after March 12, 1996.

(2) The initial design capacity report shall contain the following information:

(i) A map or plot of the landfill, providing the size and location of the landfill, and identifying all areas where solid waste may be landfilled according to the permit issued by the State, local, or tribal agency responsible for regulating the landfill.

(ii) The maximum design capacity of the landfill. Where the maximum design capacity is specified in the permit issued by the State, local, or tribal agency responsible for regulating the landfill, a copy of the permit specifying the maximum design capacity may be submitted as part of the report. If the maximum design capacity of the landfill is not specified in the permit, the maximum design capacity shall be calculated using good engineering practices. The calculations shall be provided, along with the relevant parameters as part of the report. The State, Tribal, local agency or Administrator may request other reasonable information as may be necessary to verify the maximum design capacity of the landfill.
(3) An amended design capacity report shall be submitted to the Administrator providing notification of an increase in the design capacity of the landfill, within 90 days of an increase in the maximum design capacity of the landfill to or above 2.5 million megagrams and 2.5 million cubic meters. This increase in design capacity may result from an increase in the permitted volume of the landfill or an increase in the density as documented in the annual recalculation required in §60.758(f).

(b) Each owner or operator subject to the requirements of this subpart shall submit an NMOC emission rate report to the Administrator initially and annually thereafter, except as provided for in paragraphs (b)(1)(ii) or (b)(3) of this section. The Administrator may request such additional information as may be necessary to verify the reported NMOC emission rate.

(1) The NMOC emission rate report shall contain an annual or 5-year estimate of the NMOC emission rate calculated using the formula and procedures provided in §60.754(a) or (b), as applicable.

(i) The initial NMOC emission rate report may be combined with the initial design capacity report required in paragraph (a) of this section and shall be submitted no later than indicated in paragraphs (b)(1)(i)(A) and (B) of this section. Subsequent NMOC emission rate reports shall be submitted annually thereafter, except as provided for in paragraphs (b)(1)(ii) and (b)(3) of this section.

(A) June 10, 1996, for landfills that commenced construction, modification, or reconstruction on or after May 30, 1991, but before March 12, 1996, or

(B) Ninety days after the date of commenced construction, modification, or reconstruction for landfills that commence construction, modification, or reconstruction on or after March 12, 1996.

(ii) If the estimated NMOC emission rate as reported in the annual report to the Administrator is less than 50 megagrams per year in each of the next 5 consecutive years, the owner or operator may elect to submit an estimate of the NMOC emission rate for the next 5-year period in lieu of the annual report. This estimate shall include the current amount of solid waste-in-place and the estimated waste acceptance rate for each year of the 5 years for which an NMOC emission rate is estimated. All data and calculations upon which this estimate is based shall be provided to the Administrator. This estimate shall be revised at least once every 5 years. If the actual waste acceptance rate exceeds the estimated waste acceptance rate in any year reported in the 5-year estimate, a revised 5-year estimate shall be submitted to the Administrator. The revised estimate shall cover the 5-year period beginning with the year in which the actual waste acceptance rate exceeded the estimated waste acceptance rate.

(2) The NMOC emission rate report shall include all the data, calculations, sample reports and measurements used to estimate the annual or 5-year emissions.

(3) Each owner or operator subject to the requirements of this subpart is exempted from the requirements of paragraphs (b)(1) and (2) of this section, after the installation of a
(a) The provisions of §60.752(b)(2)(i) shall apply to any controlled landfill that produces 50 megagrams or greater of NMOC per year during such time as the collection and control system is in operation and in compliance with §§60.753 and 60.755.

(c) Each owner or operator subject to the provisions of §60.752(b)(2)(i) shall submit a collection and control system design plan to the Administrator within 1 year of the first report required under paragraph (b) of this section in which the emission rate equals or exceeds 50 megagrams per year, except as follows:

(1) If the owner or operator elects to recalculate the NMOC emission rate after Tier 2 NMOC sampling and analysis as provided in §60.754(a)(3) and the resulting rate is less than 50 megagrams per year, annual periodic reporting shall be resumed, using the Tier 2 determined site-specific NMOC concentration, until the calculated emission rate is equal to or greater than 50 megagrams per year or the landfill is closed. The revised NMOC emission rate report, with the recalculated emission rate based on NMOC sampling and analysis, shall be submitted within 180 days of the first calculated exceedance of 50 megagrams per year.

(2) If the owner or operator elects to recalculate the NMOC emission rate after determining a site-specific methane generation rate constant (k), as provided in Tier 3 in §60.754(a)(4), and the resulting NMOC emission rate is less than 50 Mg/yr, annual periodic reporting shall be resumed. The resulting site-specific methane generation rate constant (k) shall be used in the emission rate calculation until such time as the emissions calculation results in an exceedance. The revised NMOC emission rate report based on the provisions of §60.754(a)(4) and the resulting site-specific methane generation rate constant (k) shall be submitted to the Administrator within 1 year of the first calculated emission rate exceeding 50 megagrams per year.

(d) Each owner or operator of a controlled landfill shall submit a closure report to the Administrator within 30 days of waste acceptance cessation. The Administrator may request additional information as may be necessary to verify that permanent closure has taken place in accordance with the requirements of 40 CFR 258.60. If a closure report has been submitted to the Administrator, no additional wastes may be placed into the landfill without filing a notification of modification as described under §60.7(a)(4).

(e) Each owner or operator of a controlled landfill shall submit an equipment removal report to the Administrator 30 days prior to removal or cessation of operation of the control equipment.

(1) The equipment removal report shall contain all of the following items:

(i) A copy of the closure report submitted in accordance with paragraph (d) of this section;

(ii) A copy of the initial performance test report demonstrating that the 15 year minimum control period has expired; and

(iii) Dated copies of three successive NMOC emission rate reports demonstrating that the landfill is no longer producing 50 megagrams or greater of NMOC per year.
(2) The Administrator may request such additional information as may be necessary to verify that all of the conditions for removal in §60.752(b)(2)(v) have been met.

(f) Each owner or operator of a landfill seeking to comply with §60.752(b)(2) using an active collection system designed in accordance with §60.752(b)(2)(ii) shall submit to the Administrator annual reports of the recorded information in (f)(1) through (f)(6) of this paragraph. The initial annual report shall be submitted within 180 days of installation and start-up of the collection and control system, and shall include the initial performance test report required under §60.8. For enclosed combustion devices and flares, reportable exceedances are defined under §60.758(c).

(1) Value and length of time for exceedance of applicable parameters monitored under §60.756(a), (b), (c), and (d).

(2) Description and duration of all periods when the gas stream is diverted from the control device through a bypass line or the indication of bypass flow as specified under §60.756.

(3) Description and duration of all periods when the control device was not operating for a period exceeding 1 hour and length of time the control device was not operating.

(4) All periods when the collection system was not operating in excess of 5 days.

(5) The location of each exceedance of the 500 parts per million methane concentration as provided in §60.753(d) and the concentration recorded at each location for which an exceedance was recorded in the previous month.

(6) The date of installation and the location of each well or collection system expansion added pursuant to paragraphs (a)(3), (b), and (c)(4) of §60.755.

(g) Each owner or operator seeking to comply with §60.752(b)(2)(iii) shall include the following information with the initial performance test report required under §60.8:

(1) A diagram of the collection system showing collection system positioning including all wells, horizontal collectors, surface collectors, or other gas extraction devices, including the locations of any areas excluded from collection and the proposed sites for the future collection system expansion;

(2) The data upon which the sufficient density of wells, horizontal collectors, surface collectors, or other gas extraction devices and the gas mover equipment sizing are based;

(3) The documentation of the presence of asbestos or nondegradable material for each area from which collection wells have been excluded based on the presence of asbestos or nondegradable material;

(4) The sum of the gas generation flow rates for all areas from which collection wells have been excluded based on nonproductivity and the calculations of gas generation flow rate for each excluded area; and
(5) The provisions for increasing gas mover equipment capacity with increased gas generation flow rate, if the present gas mover equipment is inadequate to move the maximum flow rate expected over the life of the landfill; and

(6) The provisions for the control of off-site migration.

§60.758 Recordkeeping requirements.

(a) Except as provided in §60.752(b)(2)(i)(B), each owner or operator of an MSW landfill subject to the provisions of §60.752(b) shall keep for at least 5 years up-to-date, readily accessible, on-site records of the design capacity report which triggered §60.752(b), the current amount of solid waste in-place, and the year-by-year waste acceptance rate. Off-site records may be maintained if they are retrievable within 4 hours. Either paper copy or electronic formats are acceptable.

(b) Except as provided in §60.752(b)(2)(i)(B), each owner or operator of a controlled landfill shall keep up-to-date, readily accessible records for the life of the control equipment of the data listed in paragraphs (b)(1) through (b)(4) of this section as measured during the initial performance test or compliance determination. Records of subsequent tests or monitoring shall be maintained for a minimum of 5 years. Records of the control device vendor specifications shall be maintained until removal.

(1) Where an owner or operator subject to the provisions of this subpart seeks to demonstrate compliance with §60.752(b)(2)(ii):

   (i) The maximum expected gas generation flow rate as calculated in §60.755(a)(1). The owner or operator may use another method to determine the maximum gas generation flow rate, if the method has been approved by the Administrator.

   (ii) The density of wells, horizontal collectors, surface collectors, or other gas extraction devices determined using the procedures specified in §60.759(a)(1).

(2) Where an owner or operator subject to the provisions of this subpart seeks to demonstrate compliance with §60.752(b)(2)(iii) through use of an enclosed combustion device other than a boiler or process heater with a design heat input capacity equal to or greater than 44 megawatts:

   (i) The average combustion temperature measured at least every 15 minutes and averaged over the same time period of the performance test.

   (ii) The percent reduction of NMOC determined as specified in §60.752(b)(2)(iii)(B) achieved by the control device.
(3) Where an owner or operator subject to the provisions of this subpart seeks to demonstrate compliance with §60.752(b)(2)(iii)(B)(1) through use of a boiler or process heater of any size: a description of the location at which the collected gas vent stream is introduced into the boiler or process heater over the same time period of the performance testing.

(4) Where an owner or operator subject to the provisions of this subpart seeks to demonstrate compliance with §60.752(b)(2)(iii)(A) through use of an open flare, the flare type (i.e., steam-assisted, air-assisted, or nonassisted), all visible emission readings, heat content determination, flow rate or bypass flow rate measurements, and exit velocity determinations made during the performance test as specified in §60.18; continuous records of the flare pilot flame or flare flame monitoring and records of all periods of operations during which the pilot flame of the flare flame is absent.

(c) Except as provided in §60.752(b)(2)(i)(B), each owner or operator of a controlled landfill subject to the provisions of this subpart shall keep for 5 years up-to-date, readily accessible continuous records of the equipment operating parameters specified to be monitored in §60.756 as well as up-to-date, readily accessible records for periods of operation during which the parameter boundaries established during the most recent performance test are exceeded.

(1) The following constitute exceedances that shall be recorded and reported under §60.757(f):

(i) For enclosed combustors except for boilers and process heaters with design heat input capacity of 44 megawatts (150 million British thermal unit per hour) or greater, all 3-hour periods of operation during which the average combustion temperature was more than 28 oC below the average combustion temperature during the most recent performance test at which compliance with §60.752(b)(2)(iii) was determined.

(ii) For boilers or process heaters, whenever there is a change in the location at which the vent stream is introduced into the flame zone as required under paragraph (b)(3) of this section.

(2) Each owner or operator subject to the provisions of this subpart shall keep up-to-date, readily accessible continuous records of the indication of flow to the control device or the indication of bypass flow or records of monthly inspections of car-seals or lock-and-key configurations used to seal bypass lines, specified under §60.756.

(3) Each owner or operator subject to the provisions of this subpart who uses a boiler or process heater with a design heat input capacity of 44 megawatts or greater to comply with §60.752(b)(2)(iii) shall keep an up-to-date, readily accessible record of all periods of operation of the boiler or process heater. (Examples of such records could include records of steam use, fuel use, or monitoring data collected pursuant to other State, local, Tribal, or Federal regulatory requirements.)

(4) Each owner or operator seeking to comply with the provisions of this subpart by use of an open flare shall keep up-to-date, readily accessible continuous records of the flame or
of an open flare shall keep up-to-date, readily accessible continuous records of the flame or flare pilot flame monitoring specified under §60.756(c), and up-to-date, readily accessible records of all periods of operation in which the flame or flare pilot flame is absent.

(d) Except as provided in §60.752(b)(2)(i)(B), each owner or operator subject to the provisions of this subpart shall keep for the life of the collection system an up-to-date, readily accessible plot map showing each existing and planned collector in the system and providing a unique identification location label for each collector.

(1) Each owner or operator subject to the provisions of this subpart shall keep up-to-date, readily accessible records of the installation date and location of all newly installed collectors as specified under §60.755(b).

(2) Each owner or operator subject to the provisions of this subpart shall keep readily accessible documentation of the nature, date of deposition, amount, and location of asbestos-containing or nondegradable waste excluded from collection as provided in §60.759(a)(3)(i) as well as any nonproductive areas excluded from collection as provided in §60.759(a)(3)(ii).

(e) Except as provided in §60.752(b)(2)(i)(B), each owner or operator subject to the provisions of this subpart shall keep for at least 5 years up-to-date, readily accessible records of all collection and control system exceedances of the operational standards in §60.753, the reading in the subsequent month whether or not the second reading is an exceedance, and the location of each exceedance.

(f) Landfill owners or operators who convert design capacity from volume to mass or mass to volume to demonstrate that landfill design capacity is less than 2.5 million megagrams or 2.5 million cubic meters, as provided in the definition of “design capacity”, shall keep readily accessible, on-site records of the annual recalculation of site-specific density, design capacity, and the supporting documentation. Off-site records may be maintained if they are retrievable within 4 hours. Either paper copy or electronic formats are acceptable.

§60.759 Specifications for active collection systems.

(a) Each owner or operator seeking to comply with §60.752(b)(2)(i) shall site active collection wells, horizontal collectors, surface collectors, or other extraction devices at a sufficient density throughout all gas producing areas using the following procedures unless alternative procedures have been approved by the Administrator as provided in §60.752(b)(2)(i)(C) and (D):

(1) The collection devices within the interior and along the perimeter areas shall be certified to achieve comprehensive control of surface gas emissions by a professional engineer. The following issues shall be addressed in the design: depths of refuse, refuse gas
generation rates and flow characteristics, cover properties, gas system expandibility, leachate and condensate management, accessibility, compatibility with filling operations, integration with closure end use, air intrusion control, corrosion resistance, fill settlement, and resistance to the refuse decomposition heat.

(2) The sufficient density of gas collection devices determined in paragraph (a)(1) of this section shall address landfill gas migration issues and augmentation of the collection system through the use of active or passive systems at the landfill perimeter or exterior.

(3) The placement of gas collection devices determined in paragraph (a)(1) of this section shall control all gas producing areas, except as provided by paragraphs (a)(3)(i) and (a)(3)(ii) of this section.

(i) Any segregated area of asbestos or nondegradable material may be excluded from collection if documented as provided under §60.758(d). The documentation shall provide the nature, date of deposition, location and amount of asbestos or nondegradable material deposited in the area, and shall be provided to the Administrator upon request.

(ii) Any nonproductive area of the landfill may be excluded from control, provided that the total of all excluded areas can be shown to contribute less than 1 percent of the total amount of NMOC emissions from the landfill. The amount, location, and age of the material shall be documented and provided to the Administrator upon request. A separate NMOC emissions estimate shall be made for each section proposed for exclusion, and the sum of all such sections shall be compared to the NMOC emissions estimate for the entire landfill. Emissions from each section shall be computed using the following equation:

\[ Q_i = 2 k L_o M_i (e^{-kt_i}) (C_{NMOC}) (3.6 \times 10^{-9}) \]

where,

- \( Q_i \) = NMOC emission rate from the \( i^{th} \) section, megagrams per year
- \( k \) = methane generation rate constant, year\(^{-1}\)
- \( L_o \) = methane generation potential, cubic meters per megagram solid waste
- \( M_i \) = mass of the degradable solid waste in the \( i^{th} \) section, megagram
- \( t_i \) = age of the solid waste in the \( i^{th} \) section, years
- \( C_{NMOC} \) = concentration of nonmethane organic compounds, parts per million by volume
- \( 3.6 \times 10^{-9} \) = conversion factor

(iii) The values for \( k \) and \( C_{NMOC} \) determined in field testing shall be used if field testing has been performed in determining the NMOC emission rate or the radii of influence (this distance from the well center to a point in the landfill where the pressure gradient applied by the blower or compressor approaches zero). If field testing has not been performed, the default values for \( k \), \( L_o \) and \( C_{NMOC} \) provided in §60.754(a)(1) or the alternative values from §60.754(a)(5) shall be used. The mass of nondegradable solid waste contained within the
given section may be subtracted from the total mass of the section when estimating emissions provided the nature, location, age, and amount of the nondegradable material is documented as provided in paragraph (a)(3)(i) of this section.

(b) Each owner or operator seeking to comply with §60.752(b)(2)(i)(A) shall construct the gas collection devices using the following equipment or procedures:

(1) The landfill gas extraction components shall be constructed of polyvinyl chloride (PVC), high density polyethylene (HDPE) pipe, fiberglass, stainless steel, or other nonporous corrosion resistant material of suitable dimensions to: convey projected amounts of gases; withstand installation, static, and settlement forces; and withstand planned overburden or traffic loads. The collection system shall extend as necessary to comply with emission and migration standards. Collection devices such as wells and horizontal collectors shall be perforated to allow gas entry without head loss sufficient to impair performance across the intended extent of control. Perforations shall be situated with regard to the need to prevent excessive air infiltration.

(2) Vertical wells shall be placed so as not to endanger underlying liners and shall address the occurrence of water within the landfill. Holes and trenches constructed for piped wells and horizontal collectors shall be of sufficient cross-section so as to allow for their proper construction and completion including, for example, centering of pipes and placement of gravel backfill. Collection devices shall be designed so as not to allow indirect short circuiting of air into the cover or refuse into the collection system or gas into the air. Any gravel used around pipe perforations should be of a dimension so as not to penetrate or block perforations.

(3) Collection devices may be connected to the collection header pipes below or above the landfill surface. The connector assembly shall include a positive closing throttle valve, any necessary seals and couplings, access couplings and at least one sampling port. The collection devices shall be constructed of PVC, HDPE, fiberglass, stainless steel, or other nonporous material of suitable thickness.

(c) Each owner or operator seeking to comply with §60.752(b)(2)(i)(A) shall convey the landfill gas to a control system in compliance with §60.752(b)(2)(iii) through the collection header pipe(s). The gas mover equipment shall be sized to handle the maximum gas generation flow rate expected over the intended use period of the gas moving equipment using the following procedures:

(1) For existing collection systems, the flow data shall be used to project the maximum flow rate. If no flow data exists, the procedures in paragraph (c)(2) of this section shall be used.

(2) For new collection systems, the maximum flow rate shall be in accordance with §60.755(a)(1).

Back to Top

WHAT THIS SUBPART COVERS

Back to Top

§63.11110 What is the purpose of this subpart?

This subpart establishes national emission limitations and management practices for hazardous air pollutants (HAP) emitted from the loading of gasoline storage tanks at gasoline dispensing facilities (GDF). This subpart also establishes requirements to demonstrate compliance with the emission limitations and management practices.

Back to Top

§63.11111 Am I subject to the requirements in this subpart?

(a) The affected source to which this subpart applies is each GDF that is located at an area source. The affected source includes each gasoline cargo tank during the delivery of product to a GDF and also includes each storage tank.

(b) If your GDF has a monthly throughput of less than 10,000 gallons of gasoline, you must comply with the requirements in §63.11116.

(c) If your GDF has a monthly throughput of 10,000 gallons of gasoline or more, you must comply with the requirements in §63.11117.

(d) If your GDF has a monthly throughput of 100,000 gallons of gasoline or more, you must comply with the requirements in §63.11118.

(e) An affected source shall, upon request by the Administrator, demonstrate that their monthly throughput is less than the 10,000-gallon or the 100,000-gallon threshold level, as applicable. For new or reconstructed affected sources, as specified in §63.11112(b) and (c), recordkeeping to document monthly throughput must begin upon startup of the affected source. For existing sources, as specified in §63.11112(d), recordkeeping to document monthly throughput must begin on January 10, 2008. For existing sources that are subject to this subpart only because they load gasoline into fuel tanks other than those in motor vehicles, recordkeeping must begin on the later of January 10, 2008, or the date the affected source first loads gasoline into fuel tanks other than those in motor vehicles.
vehicles, as defined in §63.11132, recordkeeping to document monthly throughput must begin on January 24, 2011. Records required under this paragraph shall be kept for a period of 5 years.

(f) If you are an owner or operator of affected sources, as defined in paragraph (a) of this section, you are not required to obtain a permit under 40 CFR part 70 or 40 CFR part 71 as a result of being subject to this subpart. However, you must still apply for and obtain a permit under 40 CFR part 70 or 40 CFR part 71 if you meet one or more of the applicability criteria found in 40 CFR 70.3(a) and (b) or 40 CFR 71.3(a) and (b).

(g) The loading of aviation gasoline into storage tanks at airports, and the subsequent transfer of aviation gasoline within the airport, is not subject to this subpart.

(h) Monthly throughput is the total volume of gasoline loaded into, or dispensed from, all the gasoline storage tanks located at a single affected GDF. If an area source has two or more GDF at separate locations within the area source, each GDF is treated as a separate affected source.

(i) If your affected source's throughput ever exceeds an applicable throughput threshold, the affected source will remain subject to the requirements for sources above the threshold, even if the affected source throughput later falls below the applicable throughput threshold.

(j) The dispensing of gasoline from a fixed gasoline storage tank at a GDF into a portable gasoline tank for the on-site delivery and subsequent dispensing of the gasoline into the fuel tank of a motor vehicle or other gasoline-fueled engine or equipment used within the area source is only subject to §63.11116 of this subpart.

(k) For any affected source subject to the provisions of this subpart and another Federal rule, you may elect to comply only with the more stringent provisions of the applicable subparts. You must consider all provisions of the rules, including monitoring, recordkeeping, and reporting. You must identify the affected source and provisions with which you will comply in your Notification of Compliance Status required under §63.11124. You also must demonstrate in your Notification of Compliance Status that each provision with which you will comply is at least as stringent as the otherwise applicable requirements in this subpart. You are responsible for making accurate determinations concerning the more stringent provisions, and noncompliance with this rule is not excused if it is later determined that your determination was in error, and, as a result, you are violating this subpart. Compliance with this rule is your responsibility and the Notification of Compliance Status does not alter or affect that responsibility.

or existing GDF that meet the criteria specified in §63.11111. Pressure/Vacuum vents on gasoline storage tanks and the equipment necessary to unload product from cargo tanks into the storage tanks at GDF are covered emission sources. The equipment used for the refueling of motor vehicles is not covered by this subpart.

(b) An affected source is a new affected source if you commenced construction on the affected source after November 9, 2006, and you meet the applicability criteria in §63.11111 at the time you commenced operation.

(c) An affected source is reconstructed if you meet the criteria for reconstruction as defined in §63.2.

(d) An affected source is an existing affected source if it is not new or reconstructed.

§63.11113 When do I have to comply with this subpart?

(a) If you have a new or reconstructed affected source, you must comply with this subpart according to paragraphs (a)(1) and (2) of this section, except as specified in paragraph (d) of this section.

(1) If you start up your affected source before January 10, 2008, you must comply with the standards in this subpart no later than January 10, 2008.

(2) If you start up your affected source after January 10, 2008, you must comply with the standards in this subpart upon startup of your affected source.

(b) If you have an existing affected source, you must comply with the standards in this subpart no later than January 10, 2011.

(c) If you have an existing affected source that becomes subject to the control requirements in this subpart because of an increase in the monthly throughput, as specified in §63.11111(c) or §63.11111(d), you must comply with the standards in this subpart no later than 3 years after the affected source becomes subject to the control requirements in this subpart.

(d) If you have a new or reconstructed affected source and you are complying with Table 1 to this subpart, you must comply according to paragraphs (d)(1) and (2) of this section.

(1) If you start up your affected source from November 9, 2006 to September 23, 2008, you must comply no later than September 23, 2008.

(2) If you start up your affected source after September 23, 2008, you must comply upon startup of your affected source.

(e) The initial compliance demonstration test required under §63.11120(a)(1) and (2) must be conducted as specified in paragraphs (e)(1) and (2) of this section.
(1) If you have a new or reconstructed affected source, you must conduct the initial compliance test upon installation of the complete vapor balance system.

(2) If you have an existing affected source, you must conduct the initial compliance test as specified in paragraphs (e)(2)(i) or (e)(2)(ii) of this section.

(i) For vapor balance systems installed on or before December 15, 2009, you must test no later than 180 days after the applicable compliance date specified in paragraphs (b) or (c) of this section.

(ii) For vapor balance systems installed after December 15, 2009, you must test upon installation of the complete vapor balance system.

(f) If your GDF is subject to the control requirements in this subpart only because it loads gasoline into fuel tanks other than those in motor vehicles, as defined in §63.11132, you must comply with the standards in this subpart as specified in paragraphs (f)(1) or (f)(2) of this section.

(1) If your GDF is an existing facility, you must comply by January 24, 2014.

(2) If your GDF is a new or reconstructed facility, you must comply by the dates specified in paragraphs (f)(2)(i) and (ii) of this section.

(i) If you start up your GDF after December 15, 2009, but before January 24, 2011, you must comply no later than January 24, 2011.

(ii) If you start up your GDF after January 24, 2011, you must comply upon startup of your GDF.

‡ Back to Top

EMISSION LIMITATIONS AND MANAGEMENT PRACTICES

‡ Back to Top

§63.11115 What are my general duties to minimize emissions?

Each owner or operator of an affected source under this subpart must comply with the requirements of paragraphs (a) and (b) of this section.

(a) You must, at all times, operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. Determination of whether such operation and maintenance procedures are being used will be based on information available to the Administrator which may include, but is not limited to, monitoring
results, review of operation and maintenance procedures, review of operation and
maintenance records, and inspection of the source.

(b) You must keep applicable records and submit reports as specified in §63.11125(d)
and §63.11126(b).

[76 FR 4182, Jan. 24, 2011]

§63.11116   Requirements for facilities with monthly throughput of less than 10,000
gallons of gasoline.

(a) You must not allow gasoline to be handled in a manner that would result in vapor
releases to the atmosphere for extended periods of time. Measures to be taken include, but
are not limited to, the following:

(1) Minimize gasoline spills;

(2) Clean up spills as expeditiously as practicable;

(3) Cover all open gasoline containers and all gasoline storage tank fill-pipes with a
gasketed seal when not in use;

(4) Minimize gasoline sent to open waste collection systems that collect and transport
gasoline to reclamation and recycling devices, such as oil/water separators.

(b) You are not required to submit notifications or reports as specified in §63.11125,
§63.11126, or subpart A of this part, but you must have records available within 24 hours of a
request by the Administrator to document your gasoline throughput.

(c) You must comply with the requirements of this subpart by the applicable dates
specified in §63.11113.

(d) Portable gasoline containers that meet the requirements of 40 CFR part 59, subpart
F, are considered acceptable for compliance with paragraph (a)(3) of this section.

§63.11117   Requirements for facilities with monthly throughput of 10,000 gallons of
gasoline or more.

(a) You must comply with the requirements in section §63.11116(a).

(b) Except as specified in paragraph (c) of this section, you must only load gasoline into
storage tanks at your facility by utilizing submerged filling, as defined in §63.11132, and as
specified in paragraphs (b)(1), (b)(2), or (b)(3) of this section. The applicable distances in
paragraphs (b)(1) and (2) shall be measured from the point in the opening of the submerged fill pipe that is the greatest distance from the bottom of the storage tank.

(1) Submerged fill pipes installed on or before November 9, 2006, must be no more than 12 inches from the bottom of the tank.

(2) Submerged fill pipes installed after November 9, 2006, must be no more than 6 inches from the bottom of the tank.

(3) Submerged fill pipes not meeting the specifications of paragraphs (b)(1) or (b)(2) of this section are allowed if the owner or operator can demonstrate that the liquid level in the tank is always above the entire opening of the fill pipe. Documentation providing such demonstration must be made available for inspection by the Administrator's delegated representative during the course of a site visit.

(c) Gasoline storage tanks with a capacity of less than 250 gallons are not required to comply with the submerged fill requirements in paragraph (b) of this section, but must comply only with all of the requirements in §63.11116.

(d) You must have records available within 24 hours of a request by the Administrator to document your gasoline throughput.

(e) You must submit the applicable notifications as required under §63.11124(a).

(f) You must comply with the requirements of this subpart by the applicable dates contained in §63.11113.

(B) Operates using management practices at least as stringent as those in Table 1 to this subpart.

(ii) Your gasoline dispensing facility is in compliance with an enforceable State, local, or tribal rule or permit that contains requirements of either paragraph (b)(2)(i)(A) or paragraph (b)(2)(i)(B) of this section.

(c) The emission sources listed in paragraphs (c)(1) through (3) of this section are not required to comply with the control requirements in paragraph (b) of this section, but must comply with the requirements in §63.11117.

(1) Gasoline storage tanks with a capacity of less than 250 gallons that are constructed after January 10, 2008.

(2) Gasoline storage tanks with a capacity of less than 2,000 gallons that were constructed before January 10, 2008.

(3) Gasoline storage tanks equipped with floating roofs, or the equivalent.

(d) Cargo tanks unloading at GDF must comply with the management practices in Table 2 to this subpart.

(e) You must comply with the applicable testing requirements contained in §63.11120.

(f) You must submit the applicable notifications as required under §63.11124.

(g) You must keep records and submit reports as specified in §§63.11125 and 63.11126.

(h) You must comply with the requirements of this subpart by the applicable dates contained in §63.11113.

(i) California Air Resources Board Vapor Recovery Test Procedure TP-201.1E,—Leak Rate and Cracking Pressure of Pressure/Vacuum Vent Valves, adopted October 8, 2003 (incorporated by reference, see §63.14).

(ii) Use alternative test methods and procedures in accordance with the alternative test method requirements in §63.7(f).

(2) You must demonstrate compliance with the static pressure performance requirement specified in item 1(h) of Table 1 to this subpart for your vapor balance system by conducting a static pressure test on your gasoline storage tanks using the test methods identified in paragraphs (a)(2)(i), (a)(2)(ii), or (a)(2)(iii) of this section.

(ii) Use alternative test methods and procedures in accordance with the alternative test method requirements in §63.7(f).

(b) Each owner or operator choosing, under the provisions of §63.6(g), to use a vapor balance system other than that described in Table 1 to this subpart must demonstrate to the Administrator or delegated authority under paragraph §63.11131(a) of this subpart, the equivalency of their vapor balance system to that described in Table 1 to this subpart using the procedures specified in paragraphs (b)(1) through (3) of this section.

(1) You must demonstrate initial compliance by conducting an initial performance test on the vapor balance system to demonstrate that the vapor balance system achieves 95 percent reduction using the California Air Resources Board Vapor Recovery Test Procedure TP-201.1,—Volumetric Efficiency for Phase I Vapor Recovery Systems, adopted April 12, 1996, and amended February 1, 2001, and October 8, 2003, (incorporated by reference, see §63.14).

(2) You must, during the initial performance test required under paragraph (b)(1) of this section, determine and document alternative acceptable values for the leak rate and cracking pressure requirements specified in item 1(g) of Table 1 to this subpart and for the static pressure performance requirement in item 1(h) of Table 1 to this subpart.

(3) You must comply with the testing requirements specified in paragraph (a) of this section.

(c) Conduct of performance tests. Performance tests conducted for this subpart shall be conducted under such conditions as the Administrator specifies to the owner or operator based on representative performance (i.e., performance based on normal operating
conditions) of the affected source. Upon request, the owner or operator shall make available to the Administrator such records as may be necessary to determine the conditions of performance tests.

(d) Owners and operators of gasoline cargo tanks subject to the provisions of Table 2 to this subpart must conduct annual certification testing according to the vapor tightness testing requirements found in §63.11092(f).

§63.11124  What notifications must I submit and when?

(a) Each owner or operator subject to the control requirements in §63.11117 must comply with paragraphs (a)(1) through (3) of this section.

(1) You must submit an Initial Notification that you are subject to this subpart by May 9, 2008, or at the time you become subject to the control requirements in §63.11117, unless you meet the requirements in paragraph (a)(3) of this section. If your affected source is subject to the control requirements in §63.11117 only because it loads gasoline into fuel tanks other than those in motor vehicles, as defined in §63.11132, you must submit the Initial Notification by May 24, 2011. The Initial Notification must contain the information specified in paragraphs (a)(1)(i) through (iii) of this section. The notification must be submitted to the applicable EPA Regional Office and delegated State authority as specified in §63.13.

(i) The name and address of the owner and the operator.

(ii) The address (i.e., physical location) of the GDF.

(iii) A statement that the notification is being submitted in response to this subpart and identifying the requirements in paragraphs (a) through (c) of §63.11117 that apply to you.

(2) You must submit a Notification of Compliance Status to the applicable EPA Regional Office and the delegated State authority, as specified in §63.13, within 60 days of the applicable compliance date specified in §63.11113, unless you meet the requirements in paragraph (a)(3) of this section. The Notification of Compliance Status must be signed by a responsible official who must certify its accuracy, must indicate whether the source has complied with the requirements of this subpart, and must indicate whether the facilities' monthly throughput is calculated based on the volume of gasoline loaded into all storage tanks or on the volume of gasoline dispensed from all storage tanks. If your facility is in compliance with the requirements of this subpart at the time the Initial Notification required under paragraph (a)(1) of this section is due, the Notification of Compliance Status may be...
submitted in lieu of the Initial Notification provided it contains the information required under paragraph (a)(1) of this section.

(3) If, prior to January 10, 2008, you are operating in compliance with an enforceable State, local, or tribal rule or permit that requires submerged fill as specified in §63.11117(b), you are not required to submit an Initial Notification or a Notification of Compliance Status under paragraph (a)(1) or paragraph (a)(2) of this section.

(b) Each owner or operator subject to the control requirements in §63.11118 must comply with paragraphs (b)(1) through (5) of this section.

(1) You must submit an Initial Notification that you are subject to this subpart by May 9, 2008, or at the time you become subject to the control requirements in §63.11118. If your affected source is subject to the control requirements in §63.11118 only because it loads gasoline into fuel tanks other than those in motor vehicles, as defined in §63.11132, you must submit the Initial Notification by May 24, 2011. The Initial Notification must contain the information specified in paragraphs (b)(1)(i) through (iii) of this section. The notification must be submitted to the applicable EPA Regional Office and delegated State authority as specified in §63.13.

(i) The name and address of the owner and the operator.

(ii) The address (i.e., physical location) of the GDF.

(iii) A statement that the notification is being submitted in response to this subpart and identifying the requirements in paragraphs (a) through (c) of §63.11118 that apply to you.

(2) You must submit a Notification of Compliance Status to the applicable EPA Regional Office and the delegated State authority, as specified in §63.13, in accordance with the schedule specified in §63.9(h). The Notification of Compliance Status must be signed by a responsible official who must certify its accuracy, must indicate whether the source has complied with the requirements of this subpart, and must indicate whether the facility’s throughput is determined based on the volume of gasoline loaded into all storage tanks or on the volume of gasoline dispensed from all storage tanks. If your facility is in compliance with the requirements of this subpart at the time the Initial Notification required under paragraph (b)(1) of this section is due, the Notification of Compliance Status may be submitted in lieu of the Initial Notification provided it contains the information required under paragraph (b)(1) of this section.

(3) If, prior to January 10, 2008, you satisfy the requirements in both paragraphs (b)(3)(i) and (ii) of this section, you are not required to submit an Initial Notification or a Notification of Compliance Status under paragraph (b)(1) or paragraph (b)(2) of this subsection.

(i) You operate a vapor balance system at your gasoline dispensing facility that meets the requirements of either paragraphs (b)(3)(i)(A) or (b)(3)(i)(B) of this section.

(A) Achieves emissions reduction of at least 90 percent.
(B) Operates using management practices at least as stringent as those in Table 1 to this subpart.

(ii) Your gasoline dispensing facility is in compliance with an enforceable State, local, or tribal rule or permit that contains requirements of either paragraphs (b)(3)(i)(A) or (b)(3)(i)(B) of this section.

(4) You must submit a Notification of Performance Test, as specified in §63.9(e), prior to initiating testing required by §63.11120(a) and (b).

(5) You must submit additional notifications specified in §63.9, as applicable.

§63.11125 What are my recordkeeping requirements?

(a) Each owner or operator subject to the management practices in §63.11118 must keep records of all tests performed under §63.11120(a) and (b).

(b) Records required under paragraph (a) of this section shall be kept for a period of 5 years and shall be made available for inspection by the Administrator's delegated representatives during the course of a site visit.

(c) Each owner or operator of a gasoline cargo tank subject to the management practices in Table 2 to this subpart must keep records documenting vapor tightness testing for a period of 5 years. Documentation must include each of the items specified in §63.11094(b)(2)(i) through (viii). Records of vapor tightness testing must be retained as specified in either paragraph (c)(1) or paragraph (c)(2) of this section.

(1) The owner or operator must keep all vapor tightness testing records with the cargo tank.

(2) As an alternative to keeping all records with the cargo tank, the owner or operator may comply with the requirements of paragraphs (c)(2)(i) and (ii) of this section.

(i) The owner or operator may keep records of only the most recent vapor tightness test with the cargo tank, and keep records for the previous 4 years at their office or another central location.

(ii) Vapor tightness testing records that are kept at a location other than with the cargo tank must be instantly available (e.g., via e-mail or facsimile) to the Administrator's delegated representative during the course of a site visit or within a mutually agreeable time frame. Such records must be an exact duplicate image of the original paper copy record with certifying signatures.

(d) Each owner or operator of an affected source under this subpart shall keep records as specified in paragraphs (d)(1) and (2) of this section.

https://www.ecfr.gov/cgi-bin/text-idx?SID=72ec441c74fd0855e0c732284bb1ff5c&mc=true&node=sp40.16.63.ccccccc&rgn=div6
(1) Records of the occurrence and duration of each malfunction of operation (i.e., process equipment) or the air pollution control and monitoring equipment.

(2) Records of actions taken during periods of malfunction to minimize emissions in accordance with §63.11115(a), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation.

§63.11126  What are my reporting requirements?

(a) Each owner or operator subject to the management practices in §63.11118 shall report to the Administrator the results of all volumetric efficiency tests required under §63.11120(b). Reports submitted under this paragraph must be submitted within 180 days of the completion of the performance testing.

(b) Each owner or operator of an affected source under this subpart shall report, by March 15 of each year, the number, duration, and a brief description of each type of malfunction which occurred during the previous calendar year and which caused or may have caused any applicable emission limitation to be exceeded. The report must also include a description of actions taken by an owner or operator during a malfunction of an affected source to minimize emissions in accordance with §63.11115(a), including actions taken to correct a malfunction. No report is necessary for a calendar year in which no malfunctions occurred.

[76 FR 4183, Jan. 24, 2011]

§63.11130  What parts of the General Provisions apply to me?

Table 3 to this subpart shows which parts of the General Provisions apply to you.

§63.11131  Who implements and enforces this subpart?

(a) This subpart can be implemented and enforced by the U.S. EPA or a delegated authority such as the applicable State, local, or tribal agency. If the U.S. EPA Administrator has delegated authority to a State, local, or tribal agency, then that agency, in addition to the U.S. EPA, has the authority to implement and enforce this subpart. Contact the applicable U.S. EPA Regional Office to find out if implementation and enforcement of this subpart is delegated to a State, local, or tribal agency.
(b) In delegating implementation and enforcement authority of this subpart to a State, local, or tribal agency under subpart E of this part, the authorities contained in paragraph (c) of this section are retained by the Administrator of U.S. EPA and cannot be transferred to the State, local, or tribal agency.

(c) The authorities that cannot be delegated to State, local, or tribal agencies are as specified in paragraphs (c)(1) through (3) of this section.

(1) Approval of alternatives to the requirements in §§63.11116 through 63.11118 and 63.11120.

(2) Approval of major alternatives to test methods under §63.7(e)(2)(ii) and (f), as defined in §63.90, and as required in this subpart.

(3) Approval of major alternatives to recordkeeping and reporting under §63.10(f), as defined in §63.90, and as required in this subpart.

§63.11132 What definitions apply to this subpart?

As used in this subpart, all terms not defined herein shall have the meaning given them in the Clean Air Act (CAA), or in subparts A and BBB BBB of this part. For purposes of this subpart, definitions in this section supersede definitions in other parts or subparts.

**Dual-point vapor balance system** means a type of vapor balance system in which the storage tank is equipped with an entry port for a gasoline fill pipe and a separate exit port for a vapor connection.

**Gasoline** means any petroleum distillate or petroleum distillate/alcohol blend having a Reid vapor pressure of 27.6 kilopascals or greater, which is used as a fuel for internal combustion engines.

**Gasoline cargo tank** means a delivery tank truck or railcar which is loading or unloading gasoline, or which has loaded or unloaded gasoline on the immediately previous load.

**Gasoline dispensing facility (GDF)** means any stationary facility which dispenses gasoline into the fuel tank of a motor vehicle, motor vehicle engine, nonroad vehicle, or nonroad engine, including a nonroad vehicle or nonroad engine used solely for competition. These facilities include, but are not limited to, facilities that dispense gasoline into on- and off-road, street, or highway motor vehicles, lawn equipment, boats, test engines, landscaping equipment, generators, pumps, and other gasoline-fueled engines and equipment.

**Monthly throughput** means the total volume of gasoline that is loaded into, or dispensed from, all gasoline storage tanks at each GDF during a month. Monthly throughput is calculated by summing the volume of gasoline loaded into, or dispensed from, all gasoline storage tanks at each GDF during the current day, plus the total volume of gasoline loaded.
into, or dispensed from, all gasoline storage tanks at each GDF during the previous 364 days, and then dividing that sum by 12.

*Motor vehicle* means any self-propelled vehicle designed for transporting persons or property on a street or highway.

*Nonroad engine* means an internal combustion engine (including the fuel system) that is not used in a motor vehicle or a vehicle used solely for competition, or that is not subject to standards promulgated under section 7411 of this title or section 7521 of this title.

*Nonroad vehicle* means a vehicle that is powered by a nonroad engine, and that is not a motor vehicle or a vehicle used solely for competition.

*Submerged filling* means, for the purposes of this subpart, the filling of a gasoline storage tank through a submerged fill pipe whose discharge is no more than the applicable distance specified in §63.11117(b) from the bottom of the tank. Bottom filling of gasoline storage tanks is included in this definition.

*Vapor balance system* means a combination of pipes and hoses that create a closed system between the vapor spaces of an unloading gasoline cargo tank and a receiving storage tank such that vapors displaced from the storage tank are transferred to the gasoline cargo tank being unloaded.

*Vapor-tight* means equipment that allows no loss of vapors. Compliance with vapor-tight requirements can be determined by checking to ensure that the concentration at a potential leak source is not equal to or greater than 100 percent of the Lower Explosive Limit when measured with a combustible gas detector, calibrated with propane, at a distance of 1 inch from the source.

*Vapor-tight gasoline cargo tank* means a gasoline cargo tank which has demonstrated within the 12 preceding months that it meets the annual certification test requirements in §63.11092(f) of this part.

### Table 1 to Subpart CCCCCC of Part 63—Applicability Criteria and Management Practices for Gasoline Dispensing Facilities With Monthly Throughput of 100,000 Gallons of Gasoline or More

<table>
<thead>
<tr>
<th>If you own or operate</th>
<th>Then you must</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. A new, reconstructed, or existing GDF subject to §63.11118</td>
<td>Install and operate a vapor balance system on your gasoline storage tanks that meets the design criteria in paragraphs (a) through (h).</td>
</tr>
<tr>
<td></td>
<td>(a) All vapor connections and lines on the storage tank shall be equipped with closures that seal upon disconnect.</td>
</tr>
<tr>
<td></td>
<td>(b) The vapor line from the gasoline storage tank to the gasoline cargo tank shall be vapor-tight, as defined in §63.11132.</td>
</tr>
<tr>
<td></td>
<td>(c) The vapor balance system shall be designed such that the pressure in the tank truck does not exceed 18 inches water pressure or 5.9 inches water vacuum during product</td>
</tr>
</tbody>
</table>
(d) The vapor recovery and product adaptors, and the method of connection with the delivery elbow, shall be designed so as to prevent the over-tightening or loosening of fittings during normal delivery operations.

(e) If a gauge well separate from the fill tube is used, it shall be provided with a submerged drop tube that extends the same distance from the bottom of the storage tank as specified in §63.11117(b).

(f) Liquid fill connections for all systems shall be equipped with vapor-tight caps.

(g) Pressure/vacuum (PV) vent valves shall be installed on the storage tank vent pipes. The pressure specifications for PV vent valves shall be: a positive pressure setting of 2.5 to 6.0 inches of water and a negative pressure setting of 6.0 to 10.0 inches of water. The total leak rate of all PV vent valves at an affected facility, including connections, shall not exceed 0.17 cubic foot per hour at a pressure of 2.0 inches of water and 0.63 cubic foot per hour at a vacuum of 4 inches of water.

(h) The vapor balance system shall be capable of meeting the static pressure performance requirement of the following equation:

\[ Pf = 2e^{-500.887/v} \]

Where:

\[ Pf = \text{Minimum allowable final pressure, inches of water.} \]
\[ v = \text{Total ullage affected by the test, gallons.} \]
\[ e = \text{Dimensionless constant equal to approximately 2.718.} \]
\[ 2 = \text{The initial pressure, inches water.} \]

2. A new or reconstructed GDF, or any storage tank(s) constructed after November 9, 2006, at an existing affected facility subject to §63.11118, must meet the following conditions:

- Equip your gasoline storage tanks with a dual-point vapor balance system, as defined in §63.11132, and comply with the requirements of item 1 in this Table.

1 The management practices specified in this Table are not applicable if you are complying with the requirements in §63.11118(b)(2), except that if you are complying with the requirements in §63.11118(b)(2)(i)(B), you must operate using management practices at least as stringent as those listed in this Table.

</table>

Compliance dates for existing area sources that become major must comply with major source standards by the date indicated in this subpart or by equivalent time period (e.g., 3 years). No.

General duty to minimize emissions at all times; information Administrator will use to determine if operation and maintenance requirements were met. No. See §63.11115 for general duty requirement.

Owner or operator must correct malfunctions as soon as possible. No.

Requirement for SSM plan; content of SSM plan; actions during SSM. No.

You must comply with emission standards at all times except during SSM. No.

Compliance based on performance test, operation and maintenance plans, records, inspection. Yes.

Procedures for getting an alternative standard. Yes.

You must comply with opacity/VE standards at all times except during SSM. No.

If standard does not State test method, use EPA Method 9 for opacity in appendix A of part 60 of this chapter and EPA Method 22 for VE in appendix A of part 60 of this chapter. No.

Criteria for when previous opacity/VE testing can be used to show compliance with this subpart. No.

Must notify Administrator of anticipated date of observation. No.

Dates and schedule for conducting opacity/VE observations. No.

Must have at least 3 hours of observation with 30 6-minute averages. No.

Must keep records available and allow Administrator to inspect. No.

Must submit COMS data with other performance test data. No.

Can submit COMS data instead of EPA Method 9 results even if rule requires EPA Method 9 in appendix A of part 60 of this chapter, but must notify Administrator before performance test. No.

To determine compliance, must reduce COMS data to 6-minute averages. No.

Owner/operator must demonstrate that COMS performance evaluations are conducted according to §63.8(e); COMS are properly maintained and operated according to §63.8(c) and data quality as §63.8(d). No.

COMS is probable but not conclusive evidence of compliance with opacity standard, even if EPA Method 9 observation shows otherwise. Requirements for COMS to be probable evidence-

CHAPTER 1: TITLE

Reg. 21.101 Title

The following rules and regulations of the Arkansas Pollution Control and Ecology Commission adopted pursuant to the Removal of Asbestos Material Act, (Section 3, Act 308 of 1997 codified at Arkansas Code Annotated (Ark. Code Ann.) § 20-27-1001 et seq.) hereinafter referred to as “the Act” and the Arkansas Water and Air Pollution Control Act, (Section 7, Act 163 of 1993 codified at Ark. Code Ann. § 8-4-101 et seq.) shall be known as the “Asbestos Abatement Regulation” or “Regulation 21”.

CHAPTER 2: PURPOSE

Reg. 21.201 Purpose

The purpose of this regulation is:

(A) To protect public health and safety and the environment;

(B) To administer and enforce a program for the licensing of Asbestos Abatement Contractors, Asbestos Abatement Consultants and Training Providers and for the certification of Air Monitors, Contractor/Supervisors, Inspectors, Management Planners, Project Designers, and Workers in accordance with the Removal of Asbestos Material Act (Ark. Code Ann. § 20-27-1001 et seq.); and

(C) To establish and enforce standards for demolitions, renovations, and disposal of regulated asbestos-containing materials in order to reduce visible emission of asbestos-containing materials as provided by the National Emission Standards for Hazardous Air Pollutants (NESHAP), 40 CFR, Part 61, and to establish standards for response actions.
CHAPTER 3: APPLICABILITY

Reg. 21.301 Applicability

The provisions of this regulation are applicable to all owners and operators conducting a demolition or renovation activity; persons conducting inspections, air monitoring, developing management plans, and designing and/or conducting response actions as defined herein; the management and disposal of asbestos-containing waste materials; and training providers.
CHAPTER 4: DEFINITIONS

“ACBM” or asbestos-containing building material means any friable and nonfriable asbestos-containing material that is in or on interior structural members or other parts of a facility.

“ACM” or asbestos-containing material means any material that contains more than one percent (1%) of friable and/or nonfriable asbestos material.

“Adequately wetted” means sufficiently mix or penetrate with liquid to prevent the release of particulates. If visible emissions are observed coming from asbestos-containing material, then that material has not been adequately wetted. However, the absence of visible emissions is not sufficient evidence of being adequately wet.

“Aggressive air sampling” means artificially circulating the air so that fibers remain airborne during sample collection.

“Air analysis” means the microscopic examination of collected air samples to determine airborne fiber concentrations.

“Air monitor” means any person who collects airborne samples for analysis of asbestos fibers.

“Air monitoring” means the process of measuring the airborne fiber concentration of a specific quantity of air over a given amount of time for purposes of clearance air monitoring as prescribed by this regulation. Air monitoring does not include individual personal monitoring.

“Air sampling” means the collection of units of air to determine airborne fiber concentration for purposes of clearance air monitoring as prescribed by this regulation.

“Asbestos abatement consultant” means any person or other legal entity, however organized, that acts as an agent for the owner or operator in performing demolitions, renovations, air monitoring, and/or response actions which will involve, or may involve, the removal or disturbance of ACM in any facility. This does not include in-house personnel performing work associated with the performance of that person's employment.

“Asbestos abatement contractor” means any person or other legal entity, however organized, that acts as an agent for the owner or operator in performing demolitions, renovations, air monitoring, and/or response actions which will involve, or may involve, the removal or disturbance of ACM in any facility. This does not include in-house personnel performing work associated with the performance of that person's employment.

“Asbestos-containing waste materials” means mill tailings or any waste that contains commercial asbestos and is generated by a source subject to the provisions of this regulation. This term includes filters from control devices, friable asbestos waste material, and bags or other similar packaging contaminated with commercial asbestos. As applied to demolition and
renovations operations, this term also includes regulated asbestos-containing waste and materials contaminated with asbestos including disposable equipment and clothing.

“ASHARA” means Asbestos School Hazard Abatement Reauthorization Act.

“Category I nonfriable asbestos-containing material” means asbestos-containing packings, gaskets, resilient floor covering, and asphalt roofing products containing more than one percent (1%) asbestos as determined using the method specified in Appendix E, Subpart E, 40 CFR Part 763, Section 1, Polarized Light Microscopy.

“Category II nonfriable asbestos-containing material” means any material, excluding category I nonfriable ACM, containing more than one percent (1%) asbestos as determined using the methods specified in Appendix E, Subpart E, 40 CFR Part 763, Section 1, Polarized Light Microscopy that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.

“Certificate” means a document issued by the Department to any person certifying that person has satisfactorily completed such asbestos training, examination (as provided in Chapter 18 of this regulation), and other requirements of this regulation to perform the duties of the following: Air Monitor, Contractor/Supervisor, Inspector, Management Planner, Project Designer, and Worker.

“Certification” means the status or classification of an individual who has been accredited in accordance with the EPA Model Accreditation Plan requirements and has satisfactorily met the additional State requirements described in this regulation.

“Certified Industrial Hygienist (CIH)” means a person certified in the comprehensive practice of Industrial Hygiene by the American Board of Industrial Hygiene.

“Clearance air monitor” means as required by this regulation, any person who measures the airborne fiber concentration of a specific quantity of air over a given amount of time at the conclusion of any demolition, renovation, or asbestos response action for which containment was utilized.

“Commercial asbestos” means any material containing asbestos that is extracted from ore and has value because of its asbestos content.

“Commission” means the Arkansas Pollution Control and Ecology Commission.

“Consent Administrative Order (CAO)” means an administrative order entered into by consent of the parties, including the Department.

“Containment” means a system installed by the owner or operator designed to minimize or eliminate the risk of the release of asbestos fibers from the work area to adjacent areas not involved in the project.

“Contractor/Supervisor” means any person who supervises the following activities with respect to friable ACM in a facility: a response action other than a SSSD activity, a maintenance
activity that disturbs friable ACM, or a response action for a major fiber release episode and meets the certification requirements of this regulation.

“Cutting” means to penetrate with a sharp-edged instrument and includes sawing, but does not include shearing, slicing, or punching.

“Demolition” means the wrecking or taking out of any load-supporting structural member of a facility together with any related handling operations or intentional burning of a facility.

“Department” means the Arkansas Department of Environmental Quality or its successor.

“Director” means the Director of the Arkansas Department of Environmental Quality or its successor, acting directly or through the staff of the Department.

“Emergency renovation operation” means a renovation operation that was not planned but results from a sudden, unexpected event that, if not immediately attended to presents a safety or public health hazard, is necessary to protect equipment from damage, or is necessary to avoid imposing an unreasonable financial burden. This term includes operations necessitated by nonroutine failures of equipment.

“Encapsulation” means the coating of ACM with a bonding or sealing agent to prevent the release of airborne fibers.

“EPA” means the United States Environmental Protection Agency.

“Facility” means any institutional, commercial, public, industrial, school, or residential structure, installation, or building (including any structure, installation, or building containing condominiums or individual dwelling units operated as a residential cooperative, but excluding residential buildings having four or fewer dwelling units); any ship; and any active or inactive waste disposal site. For purposes of this definition, any building, structure, or installation that contains a loft used as a dwelling is not considered a residential structure, installation, or building. Any structure, installation or building that was previously subject to this regulation is not excluded, regardless of its current use or function.

“Facility component” means any part of a facility, including equipment.

“Friable asbestos-containing building material (ACBM)” means any friable asbestos-containing material that is in or on interior structural members or other parts of a school, public building, or commercial building.

“Friable asbestos material” means any material containing more than one percent (1%) asbestos as determined by using the method specified in Appendix E, Subpart E, 40 CFR Part 763, Section 1, Polarized Light Microscopy that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. If the asbestos content is less than 10% as determined by a method other than point counting by Polarized Light Microscopy (PLM), verify the asbestos content by point counting using PLM. The term includes nonfriable asbestos-containing material after such previously nonfriable material becomes damaged to the extent that when dry it may be crumbled, pulverized, or reduced to powder by hand pressure.
“Glovebag” means a sealed compartment with attached inner gloves used for the handling of asbestos-containing materials. Properly installed and used, glovebags provide a small work area enclosure typically used for small-scale short-duration asbestos stripping operations. Information on glovebag installation, equipment and supplies, and work practices is contained in the Occupation Safety and Health Administration's (OSHA's) final rule on occupational exposure to asbestos (29 CFR 1926.1101).

“Grinding” means to reduce to powder or small fragments and includes mechanical chipping or drilling.

“HEPA” means High Efficiency Particulate Air (filter).

“HVAC System” means heating, ventilation, and air conditioning system.

“Individual” means any natural person.

“In poor condition” means the binding of the material is losing its integrity as indicated by peeling, cracking, or crumbling of the material.

“Inspection” means an activity undertaken in a facility to determine the presence or location, or to assess the condition, of friable or nonfriable ACM or suspect ACM, whether by visual or physical examination or by collecting samples of such material. This term includes reinspection of friable and nonfriable ACM, known or assumed, which has been previously identified. This definition does not apply to the following:

(A) Periodic visual surveillance solely for the purpose of recording or reporting a change in the condition of identified or assumed ACM;

(B) Regulatory compliance inspections conducted by Federal, State, or local government officials; and

(C) Visual observations conducted solely for the purposes of determining completion of response actions.

“Inspector” means any individual who inspects for ACM in a facility and meets the certification requirements of this regulation.

“Impact” means any building or structure or any group of buildings or structures at a single demolition or renovation site that are under the control of the same owner or operator (or owner or operator under common control).

“Leak-tight” means solids or liquids cannot escape or spill out. It also means dust-tight.

“License” means a document issued by the Department to an Asbestos Abatement Contractor, Asbestos Abatement Consultant, or Training Provider who meets the criteria for licensing described in this regulation.
“Major fiber release episode” means any uncontrolled or unintentional disturbance of ACM, resulting in a visible emission, which involves the falling or dislodging of more than three square or linear feet of friable ACM.

“Management planner” means any person who prepares management plans for a school and who meets the certification requirements of this regulation.

“Management plan” means a formal written procedure for appropriate actions for surveillance and management of ACM.

“MAP” means a Model Accreditation Plan pursuant to the Asbestos Model Accreditation, Plan; Interim Final Rule, published at 40 CFR, Part 763, Appendix C to Subpart E as of October 13, 2005.

“Minor fiber release episode” means any uncontrolled or unintentional disturbance of ACM, resulting in a visible emission, which involves the falling or dislodging of three square or linear feet or less of friable ACM.

“Nonfriable asbestos-containing material” means any material containing more than one percent (1%) asbestos as determined using the method specified in Appendix E, Subpart E, 40 CFR Part 763, Section 1, Polarized Light Microscopy, that when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.

“Nonscheduled renovation operation” means a renovation operation necessitated by the routine failure of equipment, which is expected to occur within a given period based on past operating experience, but for which an exact date cannot be predicted.

“Notice of Deficiency (NOD)” means a written document which identifies deficiencies in a Notice of Intent.

“Notice of Intent (NOI)” means a written notice to the Department which provides detailed information concerning renovations of RACM and all demolitions.

“Notice of Violation (NOV)” means a written notification to a person of alleged violations. The notice of violation (NOV) initiates an administrative enforcement action.

“Outside air” means the air outside buildings and structures including but not limited to, the air under a bridge or in an open air ferry dock.

“Owner or operator of a demolition or renovation activity” means any person who owns, leases, operates, controls, or supervises the facility being demolished or renovated or any person who owns, leases, operates, controls, or supervises the demolition or renovation operation, or both.
“Particulate asbestos material” means finely divided particles of asbestos or material containing asbestos.

“Penetrating encapsulant” means a liquid material applied to RACM to control airborne fiber release by penetrating into the material and binding the fibers together.

“Permitted landfill” means a waste disposal facility in Arkansas which has received a permit from the Department, authorizing the receipt and disposal of certain waste materials under the provisions of the Arkansas Solid Waste Management Code.

“Person or Persons” means any individual, corporation, or other legal entity.

“Planned renovations operations” means a renovation operation, or a number of such operations, in which some RACM will be removed or stripped within a given period of time and that can be predicted. Individual nonscheduled operations are included if a number of such operations can be predicted to occur during a given period of time based on operating experience.

“Project designer” means any person who designs the following activities with respect to friable ACM in a facility: a response action other than a small-scale short-duration activity, a maintenance activity that disturbs friable ACM other than a small-scale short-duration maintenance activity, or a response action for a major fiber release episode and meets the certification requirements of this regulation.

“Regulated asbestos-containing material (RACM)” means

(A) Friable asbestos material;

(B) Category I nonfriable ACM that has become friable;

(C) Category I nonfriable ACM that will be or has been subjected to sanding, grinding, cutting, or abrading;

(D) Category II nonfriable ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation operations regulated by this regulation;

(E) Category I nonfriable resilient floor covering which contains ACM that will be or has been removed by sanding, grinding, cutting, or abrading; or

(F) Category II mastic which contains ACM that will be removed by sanding, grinding, cutting, or abrading.
“Remove” means to take out RACM or facility components that contain or are covered with RACM from any facility.

“Renovation” means altering a facility or any facility components in any way, including the stripping or removal of RACM from a facility component. Operations in which load-supporting structural members are wrecked or taken out are demolitions.

“Resilient floor covering” means asbestos-containing floor tile, including asphalt and vinyl floor tile, and sheet vinyl floor covering containing more than one percent (1%) asbestos as determined using polarized light microscopy according to the method specified in Appendix E, Subpart E, 40 CFR Part 763, Section 1, Polarized Light Microscopy, as of June 19, 1995.

“Response action” means a method, including removal, encapsulation, enclosure, repair, and operation and maintenance, that protects human health and the environment from friable ACM.

“School” means any elementary or secondary school as defined in Section 198 of the Elementary and Secondary Act of 1965 (20 U.S.C. 2854).

“Small-scale short-duration activities (SSSD)” means:

(A) Tasks including, but not limited to:

(1) removal of asbestos-containing insulation on pipes;

(2) removal of small quantities of asbestos-containing insulation on beams or above ceilings;

(3) replacement of an asbestos-containing gasket or a valve;

(4) installation or removal of a small section of drywall; or

(5) installation of electrical conduits through or proximate to asbestos-containing materials.

(B) SSSD can be further defined by the following considerations:

(1) removal of small quantities of ACM only if required in the performance of another maintenance activity not intended as asbestos abatement;

(2) removal of asbestos-containing thermal system insulation not to exceed amounts greater than those which can be contained in a single glovebag;

(3) minor repairs to damaged thermal system insulation which do not require removal;

(4) repairs to a piece of asbestos-containing wallboard; and
(5) repairs, involving encapsulation, enclosure, or removal, to small amounts of friable ACM only if required in the performance of emergency or routine maintenance activity and not intended solely as asbestos abatement. Such work may not exceed amounts greater than those which can be contained in a single prefabricated mini-enclosure. Such an enclosure shall conform spatially and geometrically to the localized work area, in order to perform its intended containment function.

“Strip” means to take off RACM from any part of a facility or facility component.

“Suspect building material” means any building material which the inspector considers may contain asbestos.

“Thorough inspection” means an inspection which:

(A) is written;

(B) describes the current state of the facility, or portion of the facility if the inspection did not encompass the entire facility, and the building materials therein;

(C) includes all suspect and accessible building materials;

(D) identifies if the inspection encompasses the entire facility or a portion thereof;

(E) includes an assessment of the condition of the of asbestos-containing material; and

(F) uses documented sampling methodology.

“Training day” means a day consisting of eight consecutive hours (including lunch and breaks) in which an approved training course is conducted.

“Training provider” means any person or other legal entity, however organized, who conducts some or all of the training programs for asbestos professional disciplines which are regulated in this regulation and meets the licensing requirements of this regulation.

“Transmission electron microscopy (TEM)” means a method of analyzing air samples and bulk samples through the use of a transmission electron microscope operated under procedures listed in 40 CFR, Part 763, Subpart E, Appendix A (AHERA), as of June 19, 1995. The transmission electron microscope utilizes an electron beam that is focused onto a thin sample.

“Visible emissions” means any emissions which are visually detectable without the aid of instruments, coming from any RACM or asbestos-containing waste material. This does not include uncondensed water vapor.

“Waste generator” means any owner or operator of a source covered by this regulation whose action or process produces asbestos-containing waste materials.
“Waste shipment record” means the shipping documents required to be originated and signed by the waste generator, and used to track and substantiate the disposition of asbestos-containing waste material.

“Working days” means the days Monday through Friday, including any holidays which fall on any of the days Monday through Friday.

“Worker” means any person who meets the certification requirements of this regulation and carries out any of the following activities with respect to friable ACM in a facility: a response action other than a SSSD activity, a maintenance activity that disturbs friable ACM other than a SSSD activity, or a response action for a major fiber release.
CHAPTER 5: GENERAL PROVISIONS

Reg. 21.501 Asbestos Inspection

The owner or operator of a demolition, renovation, or response action shall conduct, or have conducted, a thorough inspection of the affected facility or part of the facility for the presence of asbestos including category I and category II nonfriable asbestos prior to the commencement of the demolition, renovation, or response action.

Reg. 21.502 Project Design

A project design is required prior to renovation, demolition, or response action that is not a SSSD or minor release episode that involves RACM. The project design must be a written document, specific to the job in question. A copy must be maintained at the job site and be made available to Department employees upon request.

Reg. 21.503 Licensing and/or Certification Provisions

A person must meet the licensing and/or certification provisions of this regulation prior to engaging in renovations, demolitions, or response activities involving RACM including, but not limited to, the following:

(A) A person supervising any of the following activities with respect to RACM in a facility—a response action other than a SSSD activity, a maintenance activity that disturbs RACM other than a SSSD activity, or a response action for a major fiber release episode—must be trained, certified as a Contractor/Supervisor, and meet all other requirements of this regulation;

(B) A person conducting an inspection for ACM in a facility must be trained, certified as an Inspector, and meet all other requirements of this regulation;

(C) A person preparing management plans for schools must be trained, certified as a Management Planner, and meet all other requirements of this regulation;

(D) A person designing the following activities with respect to RACM in a facility—a response action other than a SSSD activity, a maintenance activity that disturbs RACM other than a SSSD activity, or a response action for a major fiber release episode—must be trained, certified as a Project Designer, and meet all other requirements of this regulation;

(E) A person who carries out any of the following activities with respect to RACM in a facility—a response action other than a SSSD activity, a maintenance activity that disturbs RACM other than a SSSD activity, or a response action for a major fiber release episode—must be trained, certified as a Worker, Contractor/Supervisor, or Air Monitor, and meet all other requirements of this regulation; and
A person conducting air monitoring as defined in Chapter 4 as required by Reg. 21.901 of this regulation must be trained, certified as an Air Monitor, and meet all other requirements of this regulation. A person need not be certified under this regulation to conduct monitoring activities not required by this regulation.
CHAPTER 6: NOTIFICATIONS

Reg. 21.601 Demolition

For any demolition of a facility or facility component (even if no asbestos is present), the owner or operator shall submit a written NOI to the Department by either hand delivery, post-marked by U.S. Postal Service, or post-marked by a commercial delivery service at least 10 working days before any demolition activity begins. Such notice must be accompanied by the required fee which is described in Chapter 22 of this regulation.

Reg. 21.602 Demolition Under Order of a Government Agency

For any facility being demolished under order of a State or local government agency, issued because the facility is structurally unsound and in danger of imminent collapse, the owner or operator shall submit a written NOI to the Department by either hand delivery, postmarked by U.S. Postal Service, or commercial delivery service as early as possible before, but not later than one working day following commencement of demolition. Such notice shall be accompanied by the required fee which is described in Chapter 22 of this regulation.

Reg. 21.603 Renovation Projects

For the activities listed below, the owner or operator shall submit a NOI to the Department by either hand-delivery, post-marked by U.S. Postal Service, or post-marked by commercial delivery service at least 10 working days before asbestos stripping, removal work, or any other activity begins (such as site preparation that would break up or dislodge or similarly disturb asbestos-containing material). Such notice must be accompanied by the required fee which is described in Chapter 22 of this regulation.

(A) For any renovation project, including any nonscheduled renovation operation involving the following amounts of RACM: at least 80 linear meters (260 linear feet) on pipes or at least 15 square meters (160 square feet) on other facility components, or at least one cubic meter (35 cubic feet) where the length could not be measured previously; or

(B) For any renovation project, including any nonscheduled renovation operation involving the following amounts of resilient floor and/or associated mastic covering which contains ACM (even if no RACM is present): at least 15 square meters (160 square feet).

Reg. 21.604 Planned Renovation Operations

For planned renovation operations involving individual, nonscheduled operations of a combined additive amount of RACM to be removed or stripped during a calendar year in the amounts of at least 80 linear meters (260 linear feet) of pipe, at least 15 square meters (160 square feet) on other facility components, or at least one cubic meter (35 cubic feet) of facility components
where the length or area could not be measured previously, the owner or operator shall submit a written NOI to the Department by either hand delivery, post-marked by the U.S. Postal Service, or post-marked by a commercial delivery service by December 21 for the upcoming calendar period of January 1 through December 31. This notice must be accompanied by the required fee which is described in Chapter 22 of this regulation. To determine whether this paragraph applies to planned operations involving nonscheduled operations, the owner or operator shall predict the combined additive amount of RACM to be removed or stripped during a calendar year of January 1 through December 31.

Reg. 21.605 Emergency Renovation Operations

For emergency renovation operations involving a sudden, unexpected event that is not a SSSD or minor fiber release episode, the owner or operator shall submit a written NOI to the Department by either hand delivery, post-marked by the U.S. Postal Service, or post-marked by a commercial delivery service as early as possible, but not later than the following working day. Such notice must be accompanied by the required fee which is described in Chapter 22 of this regulation.

Reg. 21.606 NOI Requirements

All written NOI’s shall be submitted on a form provided by the Department and shall include the following:

(A) an indication of whether the notice is the original or a revised notification;

(B) name, address, and telephone number of both the facility owner and operator and the asbestos abatement contractor owner or operator;

(C) type of operation: demolition or renovation;

(D) description of the facility or affected part of the facility including the size (square meters [square feet] and number of floors) age, and present and prior use of the facility;

(E) procedure, including analytical methods, employed to detect the presence of RACM and category I and category II nonfriable ACM;

(F) estimate of the approximate amount of RACM to be removed from the facility in terms of length of pipe in linear meters (linear feet), surface areas in square meters (square feet) on other facility components, or volume in cubic meters (cubic feet) if off facility components where the length or area could not be measured previously. Also, estimate the approximate amount of category I and category II nonfriable ACM in the affected part of the facility that will not be removed before demolition;

(G) location and street address (including building number or name and floor or room number, if appropriate), city, county, and state, of the facility being demolished or renovated;
(H) scheduled starting and completion dates of asbestos removal work (or any other activity, such as site preparation that would break up, dislodge, or similarly disturb ACM) in a demolition or renovation; planned renovation operations involving individual nonscheduled operations shall only include the beginning and ending dates of the report period as described in Reg. 21.604;

(I) scheduled starting and completion dates of demolition or renovation of RACM;

(J) description of planned demolition or renovation work to be performed and method(s) to be employed, including demolition or renovation techniques to be used and description of affected facility components;

(K) description of work practices and engineering controls to be used to comply with the requirements of this subpart, including asbestos removal and waste-handling emission control procedures;

(L) name and location of the waste disposal site where the asbestos-containing waste material will be deposited;

(M) a certification that at least one Contractor/Supervisor trained as required by this regulation will supervise the stripping and removal described by this notification;

(N) for facilities described in Reg. 21.602, the name, title, and authority of the State or local government representative who has ordered the demolition, the date that the order was issued, and the date on which the demolition was ordered to begin. A copy of the order shall be attached to the notification;

(O) for emergency renovations described in Reg. 21.605, the date and hour that the emergency occurred, a description of the sudden, unexpected event, and an explanation of how the event caused an unsafe condition, or would cause equipment damage or an unreasonable financial burden;

(P) description of procedures to be followed in the event that unexpected RACM is found or category II nonfriable ACM becomes crumbled, pulverized, or reduced to powder;

(Q) name, address, and telephone number of the waste transporter;

(R) name, address, Department certification number, and telephone number of the Inspector, Project Designer, and Air Monitor; and

(S) the appropriate fee pursuant to Chapter 22 of this regulation.

Reg. 21.607 Incomplete Notifications

The Department shall review all notifications for accuracy and completeness. Notifications which are incomplete or do not otherwise meet the notification requirements of this chapter shall:
(A) be returned to the owner or operator along with a NOD;

(B) be corrected and resubmitted by the owner or operator within a time frame specified by the Department in the NOD; and

(C) be subject to a new notification period.

Reg. 21.608 Beginning Date/Asbestos Removal Change

An owner or operator who has already submitted a NOI shall notify the Department, as necessary, (1) when the beginning date for prepping and/or removal has changed and/or (2) when the amount of asbestos affected changes by at least 20%. The owner or operator shall also provide, in writing, the reason(s) for the change. Changes shall be submitted in letter form or on a revised notification form with the required fee which is described in Chapter 22 of this regulation. Delivery of the updated notice by the U.S. Postal Service, commercial delivery service, or hand delivery is required.

(A) For any start date earlier than the date provided to the Department, the owner or operator shall notify the Department in writing at least 10 working days prior to the beginning of any stripping or removal work;

(B) For any start date after the date provided to the Department, the owner or operator shall notify the Department by telephone as soon as possible before the original start date and provide the Department with a written notice of the new start date as soon as possible before, and no later than, the original start date.

Reg. 21.609 Changes to the NOI

An owner or operator who has already submitted a NOI shall notify the Department of the following changes. These changes may be submitted by phone or fax. There will be no fee for these submittals.

(A) Ending date,

(B) Scheduled work hours,

(C) Engineering controls and work practices,

(D) Disposal site,

(E) Air Monitor, Inspector, and/or Project Designer, or

(F) A change in owner.

Reg. 21.610 Changes in Operator

Changes in operator will require the submittal of a new NOI with a new notification period and a new fee as described in Chapter 22 of this regulation.
Reg. 21.611  Training Provider’s Required Submittals

Training Providers licensed pursuant to this regulation shall:

(A)  Submit to the Department a notice of any scheduled MAP asbestos-related training course. Said notice must be submitted at least seven working days prior to the course being conducted unless good cause is demonstrated to the Department that a seven day advance notice is not feasible.

(B)  The notice required pursuant to (A) above shall include the following information:

   (1)  Name of the Licensed Training Provider,

   (2)  To the extent available contact information for the Licensed Training Provider, including:

       (a)  address;

       (b)  telephone number,

       (c)  facsimile number, and

       (d)  e-mail address.

   (3)  Course information, including:

       (a)  title of course,

       (b)  date and address where course will be conducted, and

       (c)  name of instructor conducting the course.

   (4)  Notices of changes or cancellations of courses shall be submitted to the Department at least two working days prior to the scheduled date of a course unless good cause is demonstrated to the Department that two days advance notice is not feasible.

(C)  Submit to the Department, within 10 working days of completion of each MAP asbestos-related training course:

   (1)  Course name [discipline and type (initial or refresher)],

   (2)  Dates the course was conducted,

   (3)  The course instructor’s name, and

   (4)  A roster of course attendees successfully completing the course, including the following information:
(a) Name, and address of each attendee,

(b) Course completion certificate number,

(c) Class photograph or individual photos which clearly show the faces of each student successfully completing the course and a caption identifying each attendee. The photo submission requirement does not apply to refresher training courses or the Arkansas awareness training.

(D) Notify EPA or the Department, as appropriate, in advance whenever it changes course instructors.
CHAPTER 7: RECORD KEEPING

Reg. 21.701 On Site Documents

The owner or operator shall keep at the site:

(A) A copy of the inspection report, including results of any bulk sample analysis, and any air monitoring data,

(B) A copy of the NOI or any revised NOI submitted in compliance with this regulation and the attached order of any State or local government official ordering the demolition of a facility due to structural unsoundness and danger of imminent collapse if applicable,

(C) A copy of the project design, and

(D) A copy of certifications and licenses of personnel participating in demolition, renovation, or response actions.

Reg. 21.702 Wetting Operations

The owner or operator shall keep at the site copies of any written approval issued by the Department such as prior written approval from the Director to allow the owner or operator to not use wetting where it would cause unavoidable damage to equipment or present a safety hazard or to use an alternate collection device. The owner or operator shall also be required to keep copies of the recorded temperature for the area containing the facility components for the beginning, middle, and end of each workday for any period during which wetting operations were suspended due to freezing temperatures.

Reg. 21.703 Submittal of Information

The owner or operator shall make available upon request by the Department any information related to a site, including, but not limited to, the information as set forth at Reg. 21.701 above.

Reg. 21.704 Copies

Copies of all items listed in Reg. 21.701 and Reg. 21.702 shall be kept by the owner and operator for a minimum of two years from the date the regulated activity ended.
Reg. 21.801 Applicability

Demolition, renovations, or response actions, involving RACM, and which are not a SSSD or a minor fiber release episode shall be conducted by persons licensed or certified in accordance with this regulation, unless expressly excluded by this regulation.
CHAPTER 9: GENERAL WORK PROCEDURES

Reg. 21.901 Work Procedure Compliance

Each owner or operator of any RACM demolitions or any renovation impacting at least 80 linear meters (260 linear feet) of RACM on pipes or at least 15 square meters (160 square feet) of RACM on other facility components, or at least 1 cubic meter (35 cubic feet) of RACM where the length could not be measured previously shall comply with the following work procedures.

(A) Generally, the owner or operator of a demolition, renovation, or response action to whom this regulation applies shall remove all RACM from a facility before the facility is demolished or renovated or any activity begins that would break up, dislodge, or similarly disturb the material or preclude access to the material for subsequent removal. If a facility is demolished by intentional burning, all RACM including category I and category II nonfriable ACM must be removed in accordance with this regulation before burning.

(B) The owner or operator need not remove ACM before demolition if:

1. It is category I nonfriable ACM that is not in poor condition and is not friable;
2. It is on a facility component that is encased in concrete or other similarly hard material and is adequately wetted whenever exposed during demolition;
3. It was not accessible for testing and was, therefore, not discovered until after demolition began and, as a result of the demolition, the material cannot be safely removed. If not removed for safety reasons, the exposed RACM and any asbestos-contaminated debris must be treated as asbestos-containing waste material and adequately wetted at all times until disposed; or
4. It is category II nonfriable asbestos-containing material and the probability is low that the materials will become crumbled, pulverized, or reduced to powder during demolition.

(C) The owner or operator shall ensure that no RACM will be stripped, removed, or otherwise handled or disturbed at a facility regulated by this section unless one Contractor/Supervisor who is trained and meets all certification requirements of this regulation is present during all such activities.

(D) When a facility component that contains, is covered with, or is coated with RACM is taken out of a facility as a unit or in sections, the owner or operator shall:
(1) Ensure that the RACM is adequately wetted when exposed during cutting and disjointing operations; and

(2) Carefully lower each unit or section to the floor and to ground level, not dropping, throwing, sliding, or otherwise damaging or disturbing the RACM.

(E) When RACM is stripped from a facility component while it remains in place in the facility, the owner or operator shall adequately wet the RACM during the stripping operation.

(F) In renovation operations, wetting is not required if:

(1) The owner or operator has obtained prior written approval from the Director or his/her designee based upon a written application that such wetting to comply with this regulation would unavoidably damage equipment or present a safety hazard; and

(2) The owner or operator uses one of the following emission control methods:

(a) A local exhaust ventilation and collection system designed and operated to capture the particulate asbestos material produced by the stripping and removal of the asbestos materials. The system must exhibit no visible emissions to the outside air. The owner or operator may alternatively use air cleaning and shall, for fabric filter collection devices installed after January 10, 1989, provide for easy inspection for faulty bags. After January 10, 1989, if the use of a fabric filter creates a fire or explosion hazard, or the Director determines a fabric filter is not feasible, the Director may authorize as a substitute the use of wet collectors designed to operate with a unit contacting energy of at least 9.95 kilopascals (or 40 inches water gage pressure), or use a HEPA filter that is certified to be at least 99.97 percent efficient for 0.3 micron particles. The Director may authorize the use of filtering equipment other than described in Reg. 21.901(F) if the owner or operator demonstrates to the Director's satisfaction that it is equivalent to the described equipment in filtering particulate asbestos material. A copy of any authorization from the Director must be retained at the site.

(b) A glove-bag system designed and operated to contain particulate asbestos material produced by the stripping of the asbestos materials.

(c) Leak-tight wrapping to contain all RACM prior to dismantlement.
The owner or operator shall cause clearance air monitoring to be conducted inside containment after the completion of any renovation, demolition, or asbestos response action involving RACM for which containment was utilized and which involved projects at least 80 linear meters (260 linear feet) on pipes or at least 15 square meters (160 square feet), or at least one cubic meter (35 cubic feet) where the length could not be measured previously.

1. The owner or operator shall cause such sampling to be conducted by a person who has met the certification requirements of this regulation for the Air Monitor discipline as provided in this regulation and is not an employee of the licensed asbestos firm conducting the demolition, renovation, or asbestos activities.

2. The owner or operator shall cause sample analysis to be conducted by a laboratory which, for PCM analysis, uses NIOSH method 7400 and for TEM analysis, the laboratory must be approved by the National Institute of Standards Technology (NIST), National Voluntary Laboratory Accreditation Program (NVLAP).

3. The owner or operator shall cause aggressive air sampling to be conducted after removal and cleanup activities for which containment was utilized have been completed to determine the final clearance level.

   a. Aggressive sampling results indicate an air fiber count of 0.01 fibers per cubic centimeter (f/cc) or less when using PCM; or

   b. If TEM is used, an arithmetic mean of less than or equal to 70 structures per square millimeter (s/mm\(^2\)), or a Z-test result that is less than or equal to 1.65.

4. If the aggressive air sampling analysis reveals an airborne fiber count greater than 0.01 f/cc (or 70 s/mm\(^2\) or Z-test of 1.65) then the area shall be cleaned again, followed by additional aggressive air sampling. This process shall continue until the required air level has been achieved.

5. Aggressive clearance sample collection shall be done in accordance with the requirements of 40 CFR Part 763, Subpart E, Appendix A in effect on June 19, 1995.
CHAPTER 10: DISPOSAL PREPARATION

Reg. 21.1001 Disposal Preparation

The owner or operator shall dispose of RACM from all demolitions and all renovations involving projects of at least 80 linear meters (260 linear feet) on pipes or at least 15 square meters (160 square feet) on other facility components, or at least one cubic meter (or 35 cubic feet) where the length could not be measured previously in accordance with the following work procedures:

(A) After a facility component covered with, coated with, or containing RACM has been taken out of the facility as a unit or in sections as provided in this regulation, it shall be stripped or contained in leak-tight wrapping except for large facility components as provided in this section. If stripped either:

(1) The RACM shall be adequately wetted during stripping; or

(2) A local exhaust ventilation and collection system designed and operated to capture the particulate asbestos material produced by the stripping must be used. The system must exhibit no visible emissions to the outside air or be designed and operated as provided in Reg. 21.901(F).

(B) For large facility components such as reactor vessels, large tanks, and steam generators, the RACM is not required to be stripped if:

(1) The component is removed, transported, stored, disposed of, or reused without disturbing the RACM;

(2) The component is encased in a leak-tight wrapping; and

(3) During all loading and unloading operations and during storage, the leak-tight wrapping is labeled according to the following:

Mark vehicles used to transport asbestos-containing waste material during the loading and unloading of the waste so that the signs are visible. The markings must be displayed in such a manner and location that a person can easily read the legend; conform to the requirements for 51 centimeters (cm) X 36 cm (20 inches (in) X 14 in) upright format signs specified in 29 CFR 1910.145 (d)(4) and this paragraph; and display the following legend in the lower panel with letter sizes and styles of a visibility at least equal to those specified in this paragraph.

Legend:
DANGER
ASBESTOS DUST HAZARD
CANCER AND LUNG DISEASE HAZARD
Authorized Personnel Only
Notation:
For all RACM, including material that has been removed or stripped:

1. The material must be adequately wetted and remain adequately wetted until collected and contained or treated in preparation for disposal in accordance with this regulation; and

2. Carefully lower the material to the ground and floor, not dropping, throwing, sliding, or otherwise damaging or disturbing the material;

3. Transport the material to the ground via leak-tight chutes or containers if it has been removed or stripped more than 50 feet above ground level and was not removed as units or in sections;

4. RACM contained in leak-tight wrapping that has been removed in accordance with the following provisions of this regulation need not be wetted if:

   a. The owner or operator is complying with the provisions of Reg. 21.1001(A)(2);

   b. The owner or operator has received prior written approval from the Director to not wet because of resulting equipment damage or safety hazard and is using an alternate method approved in writing by the Director as set out in this regulation; or

   c. The owner or operator shall remove facility components containing, coated with, or covered with RACM as units or in sections to the maximum extent possible when the temperature at the point of wetting is below 0°C (or 32°F); and for periods during when wetting operations are suspended due to freezing temperatures, the owner or operator must record the temperature in the area containing the facility components at the beginning, middle, and end of each workday and keep daily temperature records available for inspection by the Director during normal business hours at the demolition or renovation site. The owner or operator shall retain the temperature records for at least two years from the date the regulated activity ended.
CHAPTER 11: DISPOSAL

Reg. 21.1101 Disposal

Each owner or operator of a facility shall dispose of RACM from all demolitions and all renovations involving projects of at least 80 linear meters (260 linear feet) on pipes or at least 15 square meters (160 square feet) on other facility components, or at least 1 cubic meter (35 cubic feet) where the length could not be measured previously in a manner to comply with the following work procedures. As applied to demolitions and renovations, the requirements of this section do not apply to category I nonfriable ACM waste and category II nonfriable ACM waste that did not become crumbled, pulverized, or reduced to powder.

(A) No visible emissions may be discharged to the outside air during the collection, packaging, transporting, treatment (including incineration), or disposal process of any asbestos-containing waste material generated by the source, or use one of the following emission control and waste treatment methods specified in this section:

(1) Adequately wet asbestos-containing waste material as follows:
   (a) Mix asbestos waste from a control device to form a slurry; adequately wet other asbestos-containing waste material;
   (b) Use the methods specified in this regulation to clean emissions containing particulate asbestos material before they escape to, or are vented to, the outside air;
   (c) After wetting, seal all asbestos-containing waste material in leak-tight containers while wet; or, for materials that will not fit into containers without additional breaking, put materials into leak-tight wrapping;

(2) Process asbestos-containing waste material into nonfriable forms as follows:
   (a) Form all asbestos-containing waste material into nonfriable pellets or other shapes; and
   (b) Discharge no visible emissions to the outside air from collection and processing operations, including incineration, or use the method provided for in this regulation to clean emissions containing particulate asbestos material before they escape to or are vented to the outside air.

(3) For facilities demolished where the RACM is not removed prior to demolition as provided in this regulation, asbestos-containing material shall be adequately wetted at all times during and after demolition and kept wet during handling and loading for transport to a disposal site.
Asbestos-containing waste materials covered by this paragraph must be shipped via leak-tight containers, wrapping, or bulk shipping device.

(4) Use an alternative emission control and waste treatment method that has received prior approval by the Director as provided in this regulation.

(B) Label the containers or wrapped materials specified in this section using warning labels specified by Occupational Safety and Health Standards of the Department of Labor, Occupational Safety and Health Administration (OSHA) under 29 CFR 1910.1001(j)(4) or 1926.1101(k)(8), as of December 12, 2008. The labels shall be printed in letters of sufficient size and contrast so as to be readily visible and legible;

(C) For asbestos-containing waste material to be transported off the facility site, label containers or wrapped materials with the name of the waste generator and the location at which the waste was generated and comply with all applicable Department of Transportation (DOT) requirements;

(D) All asbestos-containing waste material shall be deposited as soon as is practical by the waste generator at a disposal site approved to accept asbestos-containing waste material and that meets the requirements of NESHAP or an EPA approved site that converts RACM and asbestos-containing waste material into nonasbestos (asbestos-free) material according to the provisions of 40 CFR Part 61 as in effect December 14, 2000.

(E) Mark vehicles used to transport asbestos-containing waste material during the loading and unloading of waste so that signs are visible. The markings must conform to the requirements specified in Reg. 21.1001(B)(3).

(F) For all asbestos-containing waste material transported off the facility site a copy of a waste shipment paper, signed by the generator and transporter(s), shall accompany the shipment of asbestos-containing waste material.

Reg. 21.1102 Standards for Generators

The generator shall:

(A) Prepare a waste shipping paper, using a form including the following information:

(1) The name, address, and telephone number of the waste generator;

(2) The name and address of the Department’s Asbestos Section;

(3) The approximate quantity in cubic meters (or cubic yards);

(4) The name, address and telephone number of the waste transporter(s);
(5) The name, physical site location and telephone number of the designated disposal site;

(6) The date transported from the generator site;

(7) The date received and accepted at the designated waste disposal site; and

(8) A certification that the contents of this consignment are fully and accurately described by proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transportation by highway according to applicable international and government regulations.

(B) The waste generator shall contact the transporter and/or owner or operator of the designated disposal site if a copy of the shipping paper, signed by the owner or operator of the designated disposal site, is not received by the waste generator within 35 calendar days of the date the waste was accepted by the initial transporter, to determine the status of the waste shipment.

(C) The waste generator shall report in writing to the Department if a copy of the waste shipping paper, signed by the owner or operator of the designated waste disposal site, is not received by the waste generator within 45 calendar days of the date the waste was accepted by the initial transporter. The report shall include the following information:

(1) A copy of the waste shipping paper for which a confirmation of delivery was not received; and

(2) A cover letter signed by the waste generator explaining the efforts taken to locate the asbestos-containing waste shipment and the results of those efforts.

(D) The waste generator shall retain a copy of all waste shipping papers, including a copy of the waste shipping paper signed by the owner or operator of the designated waste disposal site, for at least two years.

(E) The waste generator shall furnish upon request, and make available for inspection by the Director, all records required to be kept by this regulation.

Reg. 21.1103 Standards for Waste Transporters

(A) The waste transporter shall sign the waste shipping paper upon acceptance of the shipment from the generator;

(B) The shipment shall be delivered to the designated waste disposal facility as expeditiously as possible;
The waste transporter shall obtain the signature of the owner or operator of the designated waste disposal facility upon delivery of the shipment of asbestos-containing waste material;

The waste transporter shall provide a copy of the waste shipping paper to the designated waste disposal facility owners or operators at the same time as the asbestos-containing waste material is delivered to the disposal site.

Reg. 21.1104 Waste Disposal Sites

Standards for designated waste disposal sites:

(A) The owner or operator of the designated waste disposal facility shall sign and date the waste shipping paper upon its receipt and acceptance of the shipment.

(B) Each owner or operator of an active waste disposal site that received asbestos-containing waste material from a source covered by this regulation shall meet the following requirements:

(1) At least once every 24-hour period while the site is in continuous operation, the asbestos-containing waste material that has been deposited at the site during the operating day or previous 24-hour period shall:

(a) Be covered with at least fifteen centimeters (or six inches) of compacted nonasbestos-containing material; or

(b) Be covered with a resinous or petroleum-based dust suppression agent that effectively binds dust and controls wind erosion. Such an agent shall be used in the manner and frequency recommended for the particular dust by the dust suppression agent manufacturers to achieve and maintain dust control. Other equally effective dust suppression agents may be used upon prior approval by the Director. For purposes of this paragraph, any used, spent, or other waste oil is not considered a dust suppression agent;

(c) Use an alternative emissions control method that has received prior written approval by the Director demonstrating the following criteria:

(i) The alternative method will control asbestos emissions equivalent to currently required methods;

(ii) The suitability of the alternative method for the intended application;

(iii) The alternative method will not violate other laws or regulations; and
(iv) The alternative method will not result in increased water pollution, land pollution, or occupational hazards.

(C) For all asbestos-containing waste material received, the owner or operator of the active waste disposal site shall:

(1) Maintain a copy of the waste shipping papers as addressed in Reg. 21.1102(A) using a form with the following information:

(a) The name, address, and telephone number of the waste generator;

(b) The name address and telephone number of the transporter(s);

(c) The quantity of the asbestos-containing waste material in cubic meters (cubic yards); and

(d) The date of the receipt.

(D) As soon as possible and no longer than 30 calendar days after receipt of the waste, send a copy of the signed waste shipment record to the waste generator.

(E) Upon discovering a discrepancy between the quantity of waste designated on the waste shipment records and the quantity actually received, attempt to reconcile the discrepancy with the waste generator. If the discrepancy is not resolved within 15 calendar days after receiving the waste, immediately report in writing to the local, State, or EPA Regional office responsible for administering the asbestos NESHAP program for the waste generator and, if different, the local, State, or EPA Regional office responsible for administering the asbestos NESHAP program for the disposal site. Describe the discrepancy and attempts to reconcile it, and submit a copy of the waste shipment record along with the report.

(F) Report in writing to the Department official responsible for administering the Asbestos program for the waste generator (identified in the waste shipment record), and, if different, the local, State, or EPA Regional office responsible for administering the asbestos NESHAP program for the disposal site, by the following working day, the presence of a significant amount of improperly enclosed or uncovered waste. Submit a copy of the waste shipment record along with the report; and

(G) Furnish upon request and make available during normal business hours for inspection by the Department all records required under this chapter.

(H) Retain a copy of all records and reports required by this chapter for at least two years from the date of disposal.

(I) Maintain, until closure, records of the location, depth and area, and quantity in cubic meters (cubic yards) of asbestos-containing waste material within the disposal site on a map or diagram of the disposal area.
(J) Upon closure of a facility, submit to the Department a copy of records of asbestos waste disposal locations and quantities.

(K) The Department shall be notified in writing at least 45 calendar days prior to excavating or otherwise disturbing any asbestos-containing waste material that has been deposited at a waste disposal site and is covered. If the excavation will begin on a date other than the one contained in the original notice, notice of the new start date must be provided to the Department at least 10 working days before excavation begins and in no event shall excavation begin earlier than the date specified in the original notification. Include the following information in the notice:

1. Scheduled start and completion dates;
2. Reason(s) for disturbing the waste;
3. Procedures to be used to control emissions during the excavation, storage, transport, and ultimate disposal of the excavated asbestos-containing waste material (if deemed necessary, the Department may require changes in the emission control procedures to be used); and
4. Location of any temporary storage site and the final disposal site.

(L) Within 60 calendar days of a site becoming inactive and after the effective date of this regulation, a notation shall be recorded, in accordance with State law, on the deed to the facility property and on any other instrument that would normally be examined during a title search. This notation will in perpetuity notify any potential purchaser of the property that:

1. The land has been used for the disposal of asbestos-containing waste material; and
2. The survey plot and record of the location and quantity of asbestos-containing waste disposed of within the disposal site required in Reg. 21.1104(I) have been filed with the Department.
CHAPTER 12: LICENSES (GENERAL)

Reg. 21.1201 Licenses

Licenses shall be issued to Asbestos Abatement Contractors, Asbestos Abatement Consultants and Training Providers. Such licenses shall be issued for a period not to exceed 12 months.

Reg. 21.1202 Renewal

Any Asbestos Abatement Contractor, Asbestos Abatement Consultant or Training Provider may apply for the renewal of a license issued by the Department. Such renewals are valid for a period not to exceed 12 months.

Reg. 21.1203 Annual Fee

The Department shall assess an annual fee for all initial licenses and for all renewals of licenses. The amounts of such fees, listed in Chapter 22 of this regulation, shall be determined by the Department.

Reg. 21.1204 Licensing and Certification Requirements

Persons who do not maintain offices in the state of Arkansas and who perform work in this state as an Asbestos Abatement Contractor, Asbestos Abatement Consultant or Training Provider, as defined in this regulation, are subject to the licensing and certification requirements of the Act and this regulation.

Reg. 21.1205 Licensing Requirement Exemptions

(A) State and federal governments (and subdivisions thereof including school districts) shall be exempt from the licensing requirements of Chapter 13 of this regulation.

(B) A facility owner shall not require a license to conduct demolition, renovation, or response actions on the owner’s facility provided such actions are conducted by permanent employees of the facility owner.

Reg. 21.1206 Permanent Employees

The permanent employee described in Reg. 21.1205(B) shall:

(A) Be trained in the proper disciplines in accordance with ASHARA and certified with the Department, and

(B) Conduct only asbestos-related activities which are associated with the performance of that person’s permanent employment. If the employee conducts asbestos-related activities on any other buildings or structures not associated with
that person's permanent employment, then the person must be under the supervision of a Contractor or Consultant licensed pursuant to this regulation.
CHAPTER 13: ASBESTOS ABATEMENT CONSULTANTS AND CONTRACTORS LICENSES

Reg. 21.1301 Initial License Application

Initial application for licenses shall be made to the Department and shall include the following:

(A) A completed application on a form provided by the Department;

(B) Annual Asbestos Abatement Consultant or Asbestos Abatement Contractor license fee as described in Chapter 22 of this regulation;

(C) Proof that the Asbestos Abatement Contractor has at least one supervisor who qualifies as a Contractor/Supervisor as determined by this regulation and who has been certified as such by the Department in accordance with this regulation;

(D) A completed Disclosure Statement pursuant to APC&EC Reg. 8.204 on a form provided by the Department; and

(E) Proof of a minimum of $1,000,000 liability insurance coverage in the form of a certificate of insurance issued by an insurance carrier authorized to do business in Arkansas by the Arkansas Insurance Department that must certify the following:

(1) Liability insurance coverage for the types of asbestos services provided, including abatement and inspection work; and

(2) A rider requiring that the insurer shall notify the Department in writing within 10 working days of any substantive changes made to the policy including, but not limited to, termination or failure to renew, or any reduction of the monetary limits of coverage.
CHAPTER 14: TRAINING PROVIDER LICENSES

Reg. 21.1401 Initial Licenses

Initial applications for licenses of approved Training Providers shall be made to the Department and shall include the following:

(A) A completed application on a form provided by the Department;

(B) Enclosure of the annual training provider fee described in Chapter 22 of this regulation;

(C) A statement certifying that each course complies with the requirements of the 40 CFR Part 763, Appendix C to Subpart E (MAP);

(D) Résumés of all instructors;

(E) Sample course agendas;

(F) A completed disclosure statement pursuant to APC&EC Reg. 8.204 on a form provided by the Department; and

(G) A statement that each discipline course complies with the minimal course content required at Chapter 19 of this regulation.

Reg. 21.1402 Requirements in Lieu of 40 CFR Part 763, Appendix C to Subpart E

Training providers who do not supply the certification described in Reg. 21.1401(C) of this Section but wish to be licensed to teach the course under this regulation shall submit in addition to the information required by Reg. 21.1401 (A), (B), (D), (E), (F) and (G), the following:

(A) The course provider's name, address and telephone number;

(B) A list of any other states that currently approve the training course;

(C) The course curriculum;

(D) A letter from the provider of the training course that clearly indicates how the course meets the MAP and the requirements of this regulation, specifically addressing the following:

(1) Length of training days in 8-hour increments;

(2) Amount and type of hands-on training;

(3) Examination (length, format, and minimum passing score); and

(4) Topics covered in the course;
(E) A copy of all course materials (including student manuals, instructor notebooks, handbooks and any other printed materials); 

(F) A description of the training methods to be used to present each topic (such as lecture, video, or hands-on); 

(G) A detailed statement about the development of the examination used in the course; 

(H) Names and qualifications of all course instructors. Instructors must have academic and/or field experience in asbestos abatement; and 

(I) A description of, and an example of, the certificates issued to students who attend and successfully complete the course by passing the required written examination. Each certificate shall include the information listed in Reg. 21.1808.

Reg. 21.1403 Refresher Training Courses

The following minimum information is required for approval of refresher training courses by the State of Arkansas:

(A) The length of training in half days or days; 

(B) The topics covered in the course; 

(C) A copy of all course materials (student manuals, instructor notebooks, handouts, etc.); 

(D) The names and qualifications of all course instructors. Instructors must have academic and/or field experience in asbestos abatement; and 

(E) A description of and an example of the certificates issued to students who complete the refresher course. Certificates shall contain the same information as described in Reg. 21.1402(I).
CHAPTER 15: CERTIFICATION/ACCREDITATION

Reg. 21.1501 Certification

Any person seeking certification in the discipline of Air Monitor, Contractor/Supervisor, Inspector, Management Planner, Project Designer, or Worker shall provide the Department with the following:

(A) The most recent certificate issued by the training provider as proof of successful completion of the applicable training course which has been approved under the provisions of 40 CFR Part 763, Appendix C to Subpart E (MAP) and subsequent revisions (photocopies will not be accepted without prior approval from the Department);

(B) A completed application on a form provided by the Department;

(C) The applicable annual certification fee listed in Chapter 22 of this regulation.

(D) A current photograph of the person requesting certification that:

   (1) If printed, shows the full face of the person seeking certification no less than ¾ of an inch wide;

   (2) If digital, has a resolution of at least 72 dpi and is in a format specified by the Department; or

   (3) Instead of providing a photograph, the person seeking certification may come to the Department’s central office during normal business hours where one will be taken.

(E) A completed disclosure statement pursuant to APC&EC Reg. 8.204 on a form provided by the Department.

Reg. 21.1502 Supervision

Except as provided in Reg. 21.1205, Certified Air Monitors, Contractor/Supervisors, Inspectors, Management Planners, Project Designers, and Workers shall work under the supervision of a facility or firm licensed as a Contractor or Consultant pursuant to the provisions of this regulation.

Reg. 21.1503 Certification Time Frame

Certificates issued by the Department shall remain valid for a period of one year from date of training unless suspended or revoked pursuant to Chapter 21 of this regulation.
CHAPTER 16: RENEWAL OF LICENSES AND CERTIFICATIONS

Reg. 21.1601 Contractors/Consultants Renewal

Asbestos Abatement Contractors and Asbestos Abatement Consultants shall submit the following in order to renew their licenses:

(A) A renewal application on a form provided by the Department;

(B) Proof of insurance as described in Reg. 21.1301(E);

(C) A renewal fee as described in Chapter 22 of this regulation; and

(D) A completed disclosure statement pursuant to APC&EC Reg. 8.204 on a form provided by the Department.

Reg. 21.1602 Training Providers Renewal

Asbestos Training Providers shall submit the following in order to renew their licenses:

(A) Renewal application on a form provided by the Department;

(B) Renewal fee as described in Chapter 22 of this regulation; and

(C) A completed disclosure statement pursuant to APC&EC Reg. 8.204 on a form provided by the Department.

Reg. 21.1603 Other Renewals

Air Monitors, Contractor/Supervisors, Inspectors, Management Planners, Project Designers, and Workers shall submit the following in order to renew their certification status:

(A) An official certificate from an EPA accredited firm documenting successful completion of an approved asbestos refresher course applicable to each discipline for which renewal is sought;

(B) An official certificate of training for the 2 hour Arkansas Regulation Course if the refresher course was not provided by an Arkansas licensed asbestos training provider;

(C) Air Monitors who have been certified under the provisions that they are a Certified Industrial Hygienist shall also submit proof of their current certification status;

(D) An application on a form provided by the Department; and

(E) Renewal fee as described in Chapter 22 of this regulation.
CHAPTER 17: LAPSED LICENSES OR CERTIFICATES

Reg. 21.1701 Expired Licenses/Certificates

Any license or certificate holder who allows a license or certificate to expire shall not conduct asbestos-related work subject to the requirements of this regulation until all renewal requirements have been met and a new license or certificate has been issued by the Department.

Reg. 21.1702 Refresher Course

Any license or certificate holder may complete the appropriate refresher course within 12 months of the expiration of the license or certificate without being required to comply with the initial training requirements.
CHAPTER 18: TRAINING

Reg. 21.1801 Training Providers

Formal training for licensing and certification, which is intended to meet the training requirements of the Act and this regulation, may be conducted by any educational institution, business entity, or individual that is licensed as a Training Provider pursuant to this regulation.

Reg. 21.1802 Minimum Requirements

Each initial training course for each discipline taught shall meet the requirements of the MAP and this regulation including the course content as outlined at Chapter 19 of this regulation and the following minimum requirements:

(A) For Workers:

(1) Course length must be a minimum of 32 hours (four 8-hour days) including lectures, demonstrations, instruction on individual respirator fit-testing, and course review with a minimum of 14 hours devoted to hands-on instruction; and

(2) A closed-book written exam of at least 50 multiple-choice questions and a minimum passing score of at least 70 percent.

(B) For Inspectors:

(1) Course length must be a minimum of 24 hours (three 8-hour days) including lectures, demonstrations, instruction on individual respirator fit-testing, course review and a minimum of four hours of hands-on instruction; and

(2) A closed-book written exam of at least 50 multiple-choice questions and a minimum passing score of 70 percent.

(C) For Management Planners:

(1) All persons seeking accreditation as Management Planners shall complete a 24-hour (three 8-hour days) Inspector training course as outlined in this section and a 16-hour (two 8-hour days) Management Planner training course. Possession of current and valid Inspector accreditation shall be a prerequisite for admission to the Management Planner training course. The Management Planner course shall include lectures demonstrations, and course review; and

(2) A closed-book written exam of at least 50 multiple choice questions with a minimum passing score of 70 percent.
(D) For Project Designers:

(1) Course length must be a minimum of 24 hours (three 8-hour days) including lectures, demonstrations, a field trip, and course review; and

(2) A closed-book written exam of at least 100 multiple choice questions and a minimum passing score of at least 70 percent.

(E) For Contractor/Supervisors:

(1) Course length must be a minimum of 40 hours (five 8-hour days) including lectures, demonstrations, and instruction on individual respirator fit-testing, course review, and a minimum of 14 hours of hands-on training; and

(2) A closed-book written exam of 100 multiple choice questions with a minimum passing score of 70 percent.

(F) For Air Monitors:

(1) All persons seeking accreditation as an Air Monitor shall complete a 40-hour (five 8-hour days) Contractor/Supervisor training course as outlined in this section and an Air Monitoring training course; unless, the applicant possesses certification as a Certified Industrial Hygienist, then current Certified Industrial Hygienist certification will replace the requirement of the Air Monitoring training course. Air Monitors are required to take the Contractor/Supervisor course and the applicable refresher course. Possession of current and valid Contractor/Supervisor accreditation shall be a prerequisite for admission to the Air Monitoring training course. Course length must be a minimum of 12 hours (one and one-half 8-hour days) including lectures, demonstrations, instruction, course review, and a minimum of four hours of hands-on training; and

(2) A closed-book written exam of 50 multiple choice questions with a minimum passing score of 70 percent.

Reg. 21.1803 Separate Discipline Training

Each discipline shall have its own separate and distinct training course and shall not be combined with any other training courses unless otherwise specified herein.

Reg. 21.1804 Examination

A member of the licensed training provider staff must be present at all times during the written examination.
Reg. 21.1805 Department Representatives

Provisions shall be made to allow a representative of the Department to attend one or more presentations of any course conducted by a licensed training provider, without payment of any associated fees. This attendance shall be for the purpose of determining compliance with this regulation and the correctness of the information being presented. The Director may revoke, suspend, or deny the application of any training license on the basis of findings resulting from this attendance.

Reg. 21.1806 Out of State Training

Individuals who have successfully completed approved training courses conducted by a training provider not licensed in accordance with this regulation, or who received training by an Arkansas licensed training provider where the items listed in Reg. 21.1907 were not taught, shall attend a two hour awareness training course to learn about Arkansas asbestos regulatory requirements and policies. Such awareness training shall be conducted by a training provider which has been licensed in accordance with this regulation.

Reg. 21.1807 Minimum Record Keeping Requirements

All licensed training providers must comply with the following minimum record keeping requirements:

(A) Training course materials. A licensed training provider must retain copies of all instructional materials used in the delivery of the classroom training such as student manuals, instructor notebooks, and handouts.

(B) Instructor qualifications. A licensed training provider must retain copies of all instructors' résumés and any document referenced by the résumés, or, for published documents, a bibliography citation sufficient to allow for the document to be located. Records must accurately identify the instructors that taught each particular course for each date that a course is offered.

(C) Examinations. A licensed training provider must document that each person who receives an accreditation certificate for an initial training course has achieved a passing score on the examination. These records must clearly indicate:

1. the date upon which the exam was administered,
2. the training course title,
3. the discipline for which the exam was given,
4. the name of the person who supervised the exam,
5. a copy of the exam, and
6. the name and test score of each person taking the exam.
The topic and dates of the training course must correspond to those listed on that person's accreditation certificate.

(D) Accreditation certificates. The licensed training providers shall maintain records that document:

1. the names of all persons who have been awarded certificates,
2. their certificate numbers,
3. the disciplines for which accreditation was conferred,
4. training and expiration dates,
5. the training location, and
6. a class photograph which clearly shows the faces of each student successfully completing the initial course and a caption identifying each attendee. The photo is not required for Refresher Courses required at Chapter 20 of this regulation.

The licensed training provider shall maintain the records in a manner that allows verification by telephone of the information required in (1)-(6).

(E) Verification of certificate information. Providers of refresher training courses shall confirm that their students possess valid accreditation before granting course admission. Licensed training providers offering the initial Management Planner or Air Monitor training courses shall verify that students have met the prerequisite training and certification at the time of course admission.

(F) Records retention and access. The licensed training provider shall maintain all required records for a minimum of three years.

(G) The licensed training provider must allow reasonable access to all records required by this regulation and the MAP for the approval of asbestos training providers, to the Department and the EPA, on request.

(H) If a licensed training provider ceases to conduct training, the training provider shall notify the Department and allow the opportunity for the Department to take possession of that provider's asbestos training records.

(I) The Department may require a training provider to produce copies or provide for inspection of any of the asbestos training records or materials listed in this Section.

Reg. 21.1808 Accreditation Certificates

Each individual who successfully completes the requirements of a training course shall be
presented with an accreditation certificate which contains the following information:

(A) The name of the individual who is being awarded the accreditation certificate;

(B) The accreditation certificate number;

(C) The disciplines for which the accreditation certificate is being awarded;

(D) The training date;

(E) The accreditation certificate expiration date; and

(F) A statement indicating the items listed in Reg. 21.1907 were taught.
CHAPTER 19: TRAINING COURSE CONTENT

Reg. 21.1901 Worker

The Worker training course shall adequately address the following topics:

(A) Physical characteristics of asbestos:

(1) Identification of asbestos;
(2) Aerodynamic characteristics;
(3) Typical uses;
(4) Physical appearance; and
(5) Summary of abatement control options.

(B) Potential health effects related to asbestos exposure:

(1) Nature of asbestos-related disease;
(2) Routes of exposure;
(3) Dose-response relationships and the lack of a safe exposure level;
(4) Synergistic effect between cigarette smoking and asbestos exposure;
(5) Latency periods for asbestos-related diseases; and
(6) Discussion of the relationship of asbestos exposure to asbestosis, lung cancer, mesothelioma, and cancers of other organs.

(C) Employee personal protective equipment:

(1) Classes and characteristics of respirator types;
(2) Limitations of respirators;
(3) Proper selection and inspection;
(4) Donning, use, maintenance and storage procedures for respirators;
(5) Methods for field testing of the face piece-to-face seal (positive and negative-pressure fit checks);
(6) Qualitative and quantitative fit testing procedures;
(7) Variability between field and laboratory protection;

(8) Factors that alter respiratory fit (e.g., facial hair);

(9) Components of a proper respiratory protection program;

(10) Selection and use of personal protective clothing;

(11) Use, storage, and handling of nondisposable clothing; and

(12) Regulations covering personal protective equipment.

(D) State-of-the-art work practices:

(1) Proper work practices for asbestos abatement activities, including descriptions of proper construction;

(2) Maintenance of barriers and decontamination enclosure systems;

(3) Positioning of warning signs;

(4) Lock-out of electrical and ventilation systems;

(5) Proper working techniques for minimizing fiber release;

(6) Use of wet methods;

(7) Use of negative pressure exhaust ventilation equipment;

(8) Use of HEPA vacuums;

(9) Proper cleanup and disposal procedures;

(10) Work practices for removal, encapsulation, enclosure, and repair of ACM;

(11) Emergency procedures for sudden releases;

(12) Potential exposure situations;

(13) Transport and disposal procedures; and

(14) Recommended and prohibited work practices.

(E) Personal hygiene:

(1) Entry and exit procedures for the work area;

(2) Use of showers;
Avoidance of eating, drinking, smoking, and chewing (gum or tobacco) in the work area; and

Potential exposures, such as family exposure.

Additional safety hazards—Hazards encountered during abatement activities and how to deal with them, including:

1. Electrical hazards;
2. Heat stress;
3. Air contaminants other than asbestos;
4. Fire and explosion hazards;
5. Scaffold and ladder hazard;
6. Slips, trips, and falls; and
7. Confined spaces.

Medical monitoring—OSHA and EPA Worker Protection Rule requirements for physical examinations, including:

1. Pulmonary function test,
2. Chest x-rays, and
3. Medical history for each employee.

Air monitoring—Procedures to determine airborne concentrations of asbestos fibers, including:

1. Descriptions of aggressive air sampling;
2. Sampling equipment and methods;
3. Reasons for air monitoring;
4. Types of samples; and
5. Interpretation of results.

Relevant Federal, Arkansas, and local regulatory requirements, procedures, and standards, including but not limited to the items listed in Reg. 21.1907, with particular attention directed at relevant EPA, OSHA, and State regulations concerning asbestos abatement workers.
(J) Establishment of respiratory protection programs.

(K) Course review—A review of key aspects of the training course.

Reg. 21.1902 Contractor/Supervisor

The Contractor/Supervisor training course shall adequately address the following topics:

(A) The physical characteristics of asbestos and ACM:
   (1) Identification of asbestos;
   (2) Aerodynamic characteristics;
   (3) Typical uses;
   (4) Physical appearance;
   (5) Review of hazard assessment considerations; and
   (6) Summary of abatement control options.

(B) Potential health effects related to asbestos exposure:
   (1) Nature of asbestos-related diseases;
   (2) Routes of exposure;
   (3) Dose-response relationships and the lack of a safe exposure level;
   (4) Synergism between cigarette smoking and asbestos exposure; and
   (5) Latency period for diseases.

(C) Employee personal protective equipment:
   (1) Classes and characteristics of respirator types;
   (2) Limitations of respirators;
   (3) Proper selection and inspection;
   (4) Donning, use, maintenance and storage procedures for respirators;
   (5) Methods for field testing of the face piece-to-face seal (positive and negative-pressure fit checks);
   (6) Qualitative and quantitative fit testing procedures;
Variability between field and laboratory protection factors that alter respiratory fit (e.g., facial hair);

Components of a proper respiratory protection program;

Selection and use of personal protective clothing;

Use, storage, and handling of nondisposable clothing; and

Regulations covering personal protective equipment.

State-of-the-art work practices. Proper work practices for asbestos abatement activities including:

Descriptions of proper construction and maintenance of barriers and decontamination enclosure systems;

Positioning of warning signs;

Lock-out of electrical and ventilation systems;

Proper working techniques for minimizing fiber release;

Use of wet methods;

Use of negative pressure exhaust ventilation equipment;

Use of HEPA vacuums and proper cleanup and disposal procedure;

Work practices for removal, encapsulation, enclosure, and repair of ACM;

Emergency procedures for unplanned releases;

Potential exposure situations;

Transport and disposal procedures and recommended and prohibited work practices; and

New abatement-related techniques and methodologies may be discussed.

Personal hygiene:

Entry and exit procedures for the work area;

Use of showers;
(3) Avoidance of eating, drinking, smoking, and chewing (gum or tobacco) in the work area; and

(4) Potential exposures, such as family exposure, shall also be included.

(F) Additional safety hazards. Hazards encountered during abatement activities and how to deal with them, including:

(1) Electrical hazards;

(2) Heat stress;

(3) Air contaminants other than asbestos;

(4) Fire and explosion hazards;

(5) Scaffold and ladder hazards;

(6) Slips, trips, and falls; and

(7) Confined spaces.

(G) Medical monitoring. OSHA and EPA Worker Protection Rule requirements for physical examinations including:

(1) Pulmonary function test;

(2) Chest X-rays; and

(3) Medical history for each employee.

(H) Air monitoring. Procedures to determine airborne concentrations of asbestos fibers including:

(1) Descriptions of aggressive air sampling;

(2) Sampling equipment and methods;

(3) Reasons for air monitoring;

(4) Types of samples; and

(5) Interpretation of results.

(I) Relevant Federal, Arkansas, and local regulatory requirements, procedures and standards including:

(1) Requirements of TSCA Title II;
(2) National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61), Subparts A (General Provisions) and M (National Emission Standard for Asbestos);

(3) OSHA standards for permissible exposure to airborne concentrations of asbestos fibers respiratory protection (29 CFR 1910.134) and subsequent changes;

(4) OSHA Asbestos Construction Standard (29 CFR 1926.1101) or any subsequent revisions;

(5) EPA Worker Protection Rule (40 CFR Part 763, Subpart G) or any subsequent revisions, and

(6) The items listed in Reg. 21.1907.

(J) Respiratory Protection Programs and Medical Monitoring Programs.

(K) Insurance and liability issues:

(1) Contractor issues;

(2) Worker's compensation coverage and exclusions;

(3) Third-party liabilities and defenses; and

(4) Insurance coverage and exclusions.

(L) Record keeping for asbestos abatement projects:

(1) Records required by Federal, Arkansas, and local regulations; and

(2) Records recommended for legal and insurance purposes;

(M) Supervisory techniques for asbestos abatement activities: Supervisory practices to enforce and reinforce the required work practices and discourage unsafe work practices.

(N) Contract specifications. Discussions of key elements that are included in contract specifications.

(O) Course review: A review of key aspects of the training course.

Reg. 21.1903 Inspector

The Inspector training course shall adequately address the following topics:

(A) Background information on asbestos:
Identification of asbestos and examples;
Discussion of the uses and locations of asbestos in buildings; and
Physical appearance of asbestos.

Potential health effects related to asbestos exposure:
Nature of asbestos-related diseases;
Routes of exposure;
Dose-response relationships and the lack of a safe exposure level;
Synergistic effect between cigarette smoking and asbestos exposure;
Latency periods for asbestos-related diseases; and
Discussion of the relationship of asbestos exposure to asbestosis, lung cancer, mesothelioma and cancers of other organs.

Functions/qualifications and role of Inspectors:
Discussions of prior experience and qualifications for Inspectors and Management Planners;
Discussions of the functions of an accredited Inspector as compared to those of an accredited Management Planner; and
Discussion of inspection process including inventory of ACM and physical assessment.

Legal liabilities and defenses:
Responsibilities of the Inspector and Management Planner;
Discussion of comprehensive general liability policies;
Claims-made and occurrence-based policies;
Environmental and pollution liability policy clauses;
State liability insurance requirements; and
Bonding and the relationship of insurance availability to bond availability.

Understanding building systems. The interrelationship between building systems including:
(1) Overview of common building physical plan layout;
(2) Heating, ventilation, and air conditioning (HVAC) system types;
(3) Physical organization, and where asbestos is found on HVAC components;
(4) Building mechanical systems, their types and organization, and where to look for asbestos on such systems;
(5) Inspecting electrical systems, including appropriate safety precautions; and
(6) Reading blueprints and as-built drawings.

(F) Public/employee/building occupant relations:

(1) Notifying employee organizations about the inspection;
(2) Signs to warn building occupants;
(3) Tact in dealing with occupants and the press;
(4) Scheduling of inspections to minimize disruptions; and
(5) Education of building occupants about actions being taken.

(G) Pre-inspection planning and review of previous inspection records:

(1) Scheduling the inspection and obtaining access;
(2) Building record review;
(3) Identification of probable homogeneous areas from blueprints or as-built drawings;
(4) Consultation with maintenance or building personnel;
(5) Review of previous inspection, sampling, and abatement records of a building; and
(6) Role of the Inspector in exclusions for previously performed inspections.

(H) Inspecting for friable and nonfriable ACM and assessing the condition of friable ACM:

(1) Procedures to follow in conducting visual inspections for friable and nonfriable ACM;
(2) Types of building materials that may contain asbestos;
(3) Touching materials to determine friability;
(4) Open return air plenums and their importance in HVAC systems;
(5) Assessing damage, significant damage, potential damage, and potential significant damage;
(6) Amount of suspected ACM, both in total quantity and as a percentage of the total area;
(7) Type of damage;
(8) Accessibility;
(9) Material's potential for disturbance;
(10) Known or suspected causes of damage or significant damage; and
(11) Deterioration as assessment factors.

(I) Bulk sampling/documentation of asbestos:

(1) Detailed discussion of the "Simplified Sampling Scheme for Friable Surfacing Materials (EPA 560/5-85-03 October 1985)" and any subsequent revisions;
(2) Techniques to ensure sampling in a randomly distributed manner for other than friable surfacing materials;
(3) Sampling of nonfriable materials;
(4) Techniques for bulk sampling;
(5) Inspector sampling and repair equipment;
(6) Patching or repair of damage from sampling;
(7) Discussion of polarized light microscopy;
(8) Choosing an accredited laboratory to analyze bulk samples; and
(9) Quality control and quality assurance procedures.

(J) Inspector respiratory protection and personal protective equipment:

(1) Classes and characteristics of respirator types;
(2) Limitations of respirators;
(3) Proper selection and inspection;
(4) Donning, use, maintenance, and storage procedures for respirators;
(5) Methods for field testing of the face piece-to-face seal (positive and negative-pressure fit checks);
(6) Qualitative and quantitative fit testing procedures;
(7) Variability between field and laboratory protection factors that alter respiratory fit (e.g., facial hair);
(8) Components of a proper respiratory protection program;
(9) Selection and use of personal protective clothing; and
(10) Use, storage, and handling of nondisposable clothing.

(K) Record keeping and writing the inspection report:
(1) Labeling of samples and keying sample identification to sampling location;
(2) Recommendations on sample labeling;
(3) Detailing of ACM inventory;
(4) Photographs of selected sampling areas and examples of ACM condition; and
(5) Information required for school buildings under TSCA Title II, Section 203(i)(1).

(L) Regulatory review. The following topics should be covered:
(1) NESHAP (40 CFR Part 61, Subparts A and M); EPA Worker Protection Rule (40 CFR Part 763, Subpart G);
(2) OSHA Asbestos Construction Standard (29 CFR 1926.1101);
(3) OSHA respirator requirements (29 CFR 1910.134); The Friable Asbestos in Schools Rule (40 CFR Part 763, Subpart E); and
(4) Applicable Arkansas and local regulations including but not limited to the items listed in Reg. 21.1907, and the effects, if any, on public and nonpublic schools or commercial or public buildings.
(M) Field trip. This includes a field exercise including:

1. Walk-through inspection;
2. On-site discussion about information gathering and the determination of sampling locations;
3. On-site practice in physical assessment; and
4. Classroom discussion of field exercise.

(N) Course review. A review of key aspects of the training course.

**Reg. 21.1904 Management Planner**

The Management Planner training course shall adequately address the following topics:

(A) Course overview. The role and responsibilities of the Management Planner:

1. Operations and maintenance programs;
2. Setting work priorities; and
3. Protection of building occupants.

(B) Evaluation/interpretation of survey results:

1. Review of TSCA Title II requirements for inspection and management plans for school buildings as given in Section 203(i)(1) of TSCA Title II;
2. Interpretation of field data and laboratory results; and
3. Comparison of field inspector's data sheet with laboratory results and site survey.

(C) Hazard assessment:

1. Amplification of the difference between physical assessment and hazard assessment;
2. Role of the Management Planner in hazard assessment;
3. Explanation of significant damage, potential damage, and potential significant damage;
4. Use of a description (or decision tree) code for assessment of ACM;
5. Assessment of friable ACM; and
(6) Relationship of accessibility, vibration sources, use of adjoining space and air plenums and other factors to hazard assessment.

(D) Legal implications:

(1) Liability;
(2) Insurance issues specific to planners;
(3) Liabilities associated with interim control measures, in-house maintenance, repair and removal; and
(4) Use of results from previously performed inspections.

(E) Evaluation and selection of control options:

(1) Overview of encapsulation;
(2) Enclosure;
(3) Interim operations and maintenance and removal;
(4) Advantages and disadvantages of each method;
(5) Response actions described via a decision tree or other appropriate method;
(6) Work practices for each response action;
(7) Staging and prioritizing of work in both vacant and occupied buildings; and
(8) Need for containment barriers and decontamination in response actions.

(F) Role of other professionals:

(1) Use of industrial hygienists, engineers, and architects in developing technical specifications for response actions;
(2) Any requirements that may exist for architect sign-off of plans; and
(3) Team approach to design of high-quality job specifications.

(G) Developing an operations and maintenance (O & M) plan:

(1) Purpose of the plan;
(2) Discussion of applicable EPA guidance documents;
(3) What actions should be taken by custodial staff; proper cleaning procedures;

(4) Steam cleaning and HEPA vacuuming;

(5) Reducing disturbance of ACM;

(6) Scheduling O & M for off-hours;

(7) Rescheduling or canceling renovation in areas with ACM;

(8) Boiler room maintenance;

(9) Disposal of ACM;

(10) In-house procedures for ACM-bridging and penetrating encapsulant;

(11) Pipe fittings, and metal sleeves;

(12) Polyvinyl chloride (PVC), canvas, and wet wraps;

(13) Muslin with straps, fiber mesh cloth;

(14) Mineral wool and insulating cement;

(15) Discussion of employee protection programs and staff training; and

(16) Case study in developing an O & M plan (development, implementation process, and problems that have been experienced).

(H) Regulatory review. Focusing on:

(1) The OSHA Asbestos Construction Standard found at 29 CFR 1926.1101 and subsequent revisions;

(2) NESHAP found at 40 CFR Part 61, Subpart A (General Provisions) and M (National Emission Standard for Asbestos);

(3) EPA Worker Protection Rule found at 40 CFR Part 763, Subpart G; TSCA Title II; and

(4) Applicable Arkansas regulations including but not limited to the items listed in Reg. 21.1907.

(I) Record keeping of the Management Planner:

(1) Use of field inspector's data sheet along with laboratory results;

(2) Ongoing record keeping as a means to track asbestos disturbance; and
(3) Procedures for record keeping.

(J) Assembling and submitting the management plan.
   (1) Plan requirements for schools in TSCA Title II Section 203(I)(1); and
   (2) The management plan as a planning tool.

(K) Financing abatement actions:
   (1) Economic analysis and cost estimates;
   (2) Development of cost estimates;
   (3) Present costs of abatement versus future operation and maintenance cost; and
   (4) Asbestos School Hazard Abatement Act grants and loans.

(L) Course review. A review of key aspects of the training course.

Reg. 21.1905 Project Designer

The Project Designer training course shall adequately address the following topics:

(A) Background information on asbestos.
   (1) Identification of asbestos;
   (2) Examples and discussion of the uses and locations of asbestos in buildings; and
   (3) Physical appearance of asbestos.

(B) Potential health effects related to asbestos exposure:
   (1) Nature of asbestos-related disease and routes of exposure;
   (2) Dose-response relationships and the lack of a safe exposure level;
   (3) Synergistic effect between cigarette smoking and asbestos exposure;
   (4) Latency periods for asbestos-related diseases; and
   (5) Discussion of the relationship of asbestos exposure to asbestosis, lung cancer, mesothelioma, and cancers of other organs.

(C) Overview of abatement construction projects:
(1) Abatement as a portion of a renovation project; and
(2) OSHA requirements for notification of other contractors on a multi-employer site (29 CFR 1926.1101).

(D) Safety system design specifications:
(1) Design, construction and maintenance of containment barriers and decontamination enclosure systems;
(2) Positioning of warning signs;
(3) Electrical and ventilation system lockout;
(4) Proper working techniques for minimizing fiber release;
(5) Entry and exit procedures for the work area;
(6) Use of wet methods;
(7) Proper techniques for initial cleaning;
(8) Use of negative-pressure exhaust ventilation equipment;
(9) Use of HEPA vacuums;
(10) Proper cleanup and disposal of asbestos;
(11) Work practices as they apply to encapsulation, enclosure, and repair; and
(12) Use of glovebags and a demonstration of glovebag use.

(E) Field trip. A visit to an abatement site or other suitable building site, including on-site discussions of abatement design and building walk-through inspection and a discussion of the rationale for the concept of functional spaces during the walk-through.

(F) Employee personal protective equipment:
(1) Classes and characteristics of respirator types;
(2) Limitations of respirators;
(3) Proper selection and inspection;
(4) Donning, use, maintenance and storage procedures for respirators;
Methods for field testing of the face piece-to-face seal (positive and negative-pressure fit checks);

Qualitative and quantitative fit testing procedures;

Variability between field and laboratory protection factors that alter respiratory fit (e.g., facial hair);

Components of a proper respiratory protection program;

Selection and use of personal protective clothing;

Use, storage, and handling of nondisposable clothing; and

Regulations covering personal protective equipment.

Additional safety hazards. Hazards encountered during abatement activities and how to deal with them including:

Electrical hazards;

Heat stress;

Contaminants other than asbestos; and

Fire and explosion hazards.

Fiber aerodynamics and control:

Aerodynamic characteristics of asbestos fibers;

Importance of proper containment barriers;

Settling time for asbestos fibers;

Wet methods in abatement;

Aggressive air monitoring following abatement, and

Aggressive air movement and negative-pressure exhaust ventilation as a cleanup method.

Designing abatement solutions:

Discussions of removal, enclosure, and encapsulation methods; and

Asbestos waste disposal.

Final clearance process:
(1) Discussion of the need for a written sampling rationale for aggressive final air clearance;

(2) Requirements of a complete visual inspection; and

(3) Relationship of the visual inspection to final air clearance.

(K) Budgeting/cost estimating:

(1) Development of cost estimates;

(2) Present costs of abatement versus future operation and maintenance costs; and

(3) Setting priorities of abatement jobs to reduce costs.

(L) Writing abatement specifications:

(1) Preparation of and need for a written project design;

(2) Means and methods specifications versus performance specifications;

(3) Design of abatement in occupied buildings;

(4) Modification of guide specifications for a particular building;

(5) Worker and building occupant health/medical considerations; and

(6) Replacement of ACM with nonasbestos substitutes.

(M) Preparing abatement drawings:

(1) Significance and need for drawings;

(2) Use of as-built drawings as base drawings;

(3) Use of inspection photographs and on-site reports;

(4) Methods of preparing abatement drawings;

(5) Diagraming containment barriers;

(6) Relationship of drawings to design specifications; and

(7) Particular problems related to abatement drawings.

(N) Contract preparation and administration.

(O) Legal/liabilities/defenses:
(1) Insurance considerations;
(2) Bonding and hold-harmless clauses;
(3) Use of abatement contractor's liability insurance; and
(4) Claims-made versus occurrence-based policies.

(P) Replacement of asbestos with asbestos-free substitutes.

(Q) Role of other consultants:
   (1) Development of technical specification sections by industrial hygienists or engineers; and
   (2) Multi-disciplinary team approach to abatement design.

(R) Occupied buildings:
   (1) Special design procedures required in occupied buildings;
   (2) Education of occupants;
   (3) Extra monitoring recommendations;
   (4) Staging of work to minimize occupancy exposure; and
   (5) Scheduling of renovation to minimize exposure.

(S) Relevant Federal, Arkansas and local regulatory requirements, procedures and standards, including, but not limited to the items listed in Reg. 21.1907 and:
   (1) Requirements of TSCA Title II;
   (2) NESHAP (40 CFR Part 61) Subparts A (General Provisions) and M (National Emission Standard for Asbestos);
   (3) OSHA Respirator Standard found in 29 CFR 1910.134;
   (4) EPA Worker Protection Rule found in 40 CFR Part 763, Subpart G;
   (5) OSHA Asbestos Construction Standard found in 29 CFR 1926.1101; and

(T) Course review: A review of key aspects of the training course.
Reg. 21.1906 Air Monitor

The Air Monitor training course shall adequately address the following topics:

(A) Generally, types of air monitoring:
   (1) Personal air monitoring;
   (2) Area air monitoring;
   (3) Preclearance air monitoring; and
   (4) Clearance air monitoring;

(B) Purpose and intent of clearance air monitoring;

(C) How to conduct clearance air monitoring;

(D) How to conduct aggressive sampling;

(E) Calibration of instruments;

(F) Selection of appropriate equipment and media;

(G) Sample placement;

(H) Calculations, chain of custody, preparation of reports, and sample labeling;

(I) General discussion of laboratories;

(J) Health considerations including decontaminating the equipment and the person performing the air monitoring;

(K) Hands-on demonstration of the following:
   (5) Calculations;
   (6) Calibration of instruments;
   (7) Placement of air monitors;
   (8) Aggressive air monitoring;
   (9) Decontamination procedures; and
   (10) Labeling; and

(L) Course overview.
Reg. 21.1907 Out of State Training

Arkansas regulatory awareness training course is a 2-hour course for individuals who have successfully completed an ASHARA-approved training course conducted by a training provider not licensed in accordance with this regulation. The course shall address, at a minimum, the following topics:

(A) The Department's relationship with the EPA, including the delegation of authority to operate Federal regulations;

(B) The Department's authority to enforce regulations on Federal facilities;

(C) The difference between NESHAP and this regulation;

(D) The relationship between the Department and OSHA; and

(E) The certification and licensing requirements in Arkansas.
CHAPTER 20: REFRESHER TRAINING COURSE

Reg. 21.2001 Refresher Training

Asbestos abatement Contractor/Supervisors, Inspectors, Management Planners, Project Designers, and Workers shall annually attend a refresher training course for reaccreditation in their respective disciplines, with the exception that Air Monitors will receive the refresher training through the Contractor/Supervisors training course.

After completing the annual refresher course, each person shall be eligible to apply to the Department to have his or her State of Arkansas certification renewed in accordance with Chapter 16 of this regulation.

Reg. 21.2002 Minimum Length

The minimum length for each refresher course for each discipline shall be as follows:

(A) For Workers, one full day (eight hours);
(B) For Contractor/supervisors, one full day (eight hours);
(C) For Inspectors, one-half (½) day (four hours);
(D) For Management Planners, one-half (½) day (four hours) of inspector refresher training and one-half (½) day of management planning refresher course; and
(E) For Project Designers, one full day (eight hours).

Reg. 21.2003 Minimum Requirements

Each refresher training course shall, at a minimum, address the following:

(A) Changes in Federal and State regulations;
(B) Developments in state-of-the-art procedures; and
(C) Review of key aspects of the initial training course.

Reg. 21.2004 Separate Refresher Courses

Refresher courses shall be conducted as separate and distinct courses and shall not be combined with any other training during the period of the refresher course.
CHAPTER 21: DENIAL AND REVOCATION

Reg. 21.2101  Denial, Suspension and Revocation

The Department may deny the application, suspend or revoke the license or certification of Asbestos Abatement Contractors, Asbestos Abatement Consultants, Air Monitors, Contractor/Supervisors, Inspectors, Management Planners, Project Designers, or Workers for reasons including, but not limited to, the following:

(A) Performing work requiring accreditation at a job site without being in physical possession of initial and current accreditation certificates and/or licenses;

(B) Permitting the duplication and/or use of one's own accreditation certificate and/or license by another;

(C) Performing work for which certification and/or licensing has not been received;

(D) Obtaining certification from a training provider that does not have approval to offer training for the particular discipline from either EPA or from the Department;

(E) Failure to comply with the terms of a Consent Administrative Order ("CAO"), a Default Administrative Order ("DAO"), an Emergency Order ("EO"), or any other final order issued by the Department and/or the Commission.

(F) Being subject to a final order imposing a civil penalty or conviction under Section 16 TSCA, 15 U.S.C. 2615 or 2647, for violations of 40 CFR Part 763, or Section 113 of the Clean Air Act, 42 U.S.C. 7413, for violations of 40 CFR Part 61, Subpart M; or

(G) Any violation of the provisions of the Act or this regulation.

Reg. 21.2102  Non-accredited Persons

The following persons are not accredited for purposes of this regulation:

(A) Any person who obtains accreditation through fraudulent representation of training or examination documents;

(B) Any person who obtains training documentation through fraudulent means;

(C) Any person who gains admission to and completes refresher training through fraudulent representation of initial or previous refresher training documentation; or
Any person who obtains accreditation through fraudulent representation of accreditation requirements such as education, training, professional registration, or experience.

Reg. 21.2103 Training Licensing

Training course approval or Training Provider licensing may be revoked for the following reasons:

(A) Misrepresentation of the extent of a training course's approval pursuant to this regulation;

(B) Failure to submit required information or notifications in a timely manner;

(C) Failure to maintain requisite records;

(D) Falsification of accreditation records, instructor qualifications, or other accreditation information;

(E) Failure to adhere to the training standards and requirements of the EPA MAP or State Accreditation Program, as appropriate;

(F) Failure to comply with the terms of a NOV or CAO issued by the Department;

(G) Being subject to a final order imposing a civil penalty or conviction under Section 16 TSCA, 15 U.S.C. 2615 or 2647, for violations of 40 CFR Part 763, or Section 113 of the Clean Air Act, 42 U.S.C. 7413, for violations of 40 CFR Part 61, Subpart M; or

(H) Any violation of the provisions of the Act or this regulation.
CHAPTER 22: FEE ASSESSMENT

Reg. 21.2201 Fee Assessment
In order to support the costs of operating the asbestos program in the state of Arkansas, the Department will assess the fees as described in this section.

Reg. 21.2202 Asbestos Abatement Consultant
Any Asbestos Abatement Consultant desiring a license to conduct asbestos abatement activities will be assessed an annual fee of $375.

Reg. 21.2203 Asbestos Abatement Contractor
Any Asbestos Abatement Contractor desiring a license to conduct asbestos abatement activities will be assessed an annual fee of $375.

Reg. 21.2204 Training Provider
Any Training Provider desiring a license to conduct asbestos training courses will be assessed an annual fee of $375.

Reg. 21.2205 Air Monitor
Any person desiring certification as an Air monitor will be assessed an annual fee of $115.

Reg. 21.2206 Contractor/Supervisor
Any person desiring certification as a Contractor/Supervisor will be assessed an annual fee of $115.

Reg. 21.2207 Inspector
Any person desiring certification as an Inspector will be assessed an annual fee of $115.

Reg. 21.2208 Management Planner
Any person desiring certification as a Management Planner will be assessed an annual fee of $115.

Reg. 21.2209 Project Designer
Any person desiring certification as a Project Designer will be assessed an annual fee of $115.

Reg. 21.2210 Worker
Any person desiring certification as a Worker will be assessed an annual fee of $25.
Reg. 21.2211 Multiple Certificates

Any person desiring certification in two or more disciplines, including Air Monitor, Contractor/Supervisor, Inspector, Management Planner, or Project Designer will be assessed a $115 fee for the first certificate and a $55 fee for each additional discipline within the same twelve month period.

Reg. 21.2212 Replacement

Any person requesting a replacement for any stolen, lost, or destroyed certification or license shall be assessed a fee of $15.

Reg. 21.2213 Processing

Any person desiring processing of certificates to be completed within thirty-six hours of submission to the Department will be assessed an expedited processing fee of $50.

Reg. 21.2214 Demolition – Greater than One Square/Linear Foot of ACM

Any NOI involving demolition of a facility as described in Reg. 21.601 and Reg. 21.602 which contains greater than one square/one linear foot of ACM shall be accompanied by a fee of $75. There is no fee for a NOI involving demolition of a facility that contains one square/one linear foot of ACM or less.

Reg. 21.2215 Demolition – 160 Square/260 Linear Feet or More of RACM

Any NOI involving demolition of a facility as described in Reg. 21.601 and Reg. 21.602 which contains 160 square/260 linear feet or more of RACM shall be accompanied by a fee of $375.

Reg. 21.2216 Reserved

RESERVED

Reg. 21.2217 Reserved

RESERVED

Reg. 21.2218 Renovation – 160 Square/260 Linear to 5,000 Square/Linear Feet of RACM

Any NOI involving renovation of a facility as described in Reg. 21.603 which contains 160 square/260 linear to 5,000 square/5,000 linear feet of RACM shall be accompanied by a fee of $225.

Reg. 21.2219 Renovation – 5001 Square/Linear to 10,000 Square/Linear Feet of RACM

Any NOI involving renovation of a facility as described in Reg. 21.603 which contains 5001 square/linear to 10,000 square/10,000 linear feet of RACM shall be accompanied by a fee of $375.
Reg. 21.2220 Renovation – Greater than 10,000 Square/Linear Feet of RACM

Any NOI involving renovation of a facility as described in Reg. 21.603 which contains more than 10,000 square/10,000 linear feet of RACM shall be accompanied by a fee of $750.

Reg. 21.2221 Emergency Renovation NOI

Any NOI involving emergency renovation operations as described in Reg. 21.605 shall be accompanied by a fee of $225.

Reg. 21.2222 Annual NOI

Any NOI for a twelve-month notice as described in Reg. 21.604 shall be accompanied by a fee of $1,125.

Reg. 21.2223 NOI Revision

Any revision of an original NOI as described in Reg. 21.608 shall be accompanied by a submittal fee of $50.
CHAPTER 23: POWERS AND DUTIES OF THE DIRECTOR

Reg. 21.2301 Application Requirements

The Director, or his/her designee, shall review applications for initial Asbestos Abatement Contractor and Asbestos Abatement Consultant licenses and renewals thereof based upon a satisfactory submittal of the following:

(A)  A completed application with submission of the annual license fee described in Chapter 22 of this regulation,

(B)  Proof that the Asbestos Abatement Contractor has one full-time employee in a supervisory capacity, who has been certified by the Department as a Contractor/Supervisor.

Reg. 21.2302 Application Review

The Director, or his/her designee, shall review applications for initial certificates and renewals thereof based upon Chapters 15 and 16 of this regulation and any other information the Director, or his/her designee, deems relevant to determine whether such application shall be approved or denied.

Reg. 21.2303 Training Provider Licenses

The Director, or his/her designee, shall review applications for the initial training provider licenses and renewals based upon Chapters 15 and 16 of this regulation and any other information the Director, or his/her designee, deems relevant to determine whether such application shall be approved or denied.

Reg. 21.2304 Disapproval

The Director, or his/her designee, shall set forth to the applicant in writing the basis for a decision to disapprove an application for a license, certificate, renewal, or revocation. Any denial, disapproval, or revocation by the Director, or his/her designee, may be appealed as provided in the Commission’s Regulation Number 8, Administrative Procedures.

Reg. 21.2305 Adoption by Reference

To establish minimum performance standards for the abatement of ACM under the Act, specific regulations promulgated by the EPA in 40 CFR Part 61, Subpart M (National Emissions Standards for Hazardous Air Pollutants) are hereby adopted as provisions of the regulation as though set forth herein line for line and word for word with the exception that all reference therein to the “Administrator” shall be considered as reference to the “Director of the Arkansas Department of Environmental Quality,” and all reference to the “United States Environmental Protection Agency” shall be considered a reference to the "Arkansas Department of Environmental Quality"; further, the effective date of provisions adopted herein by reference as provisions of this regulation shall be the date such provisions are specified as being effective by
the Commission in its rulemaking, and the effective date of the Federal regulations adopted herein shall have no bearing on the effective date of any provisions of this regulation. The following Federal regulations are hereby adopted from Title 40, Code of Federal Regulations, Part 61, Subpart M:

(A) Section 61.140;
(B) Section 61.141;
(C) Section 61.145;
(D) Section 61.147;
(E) Section 61.148;
(F) Section 61.150;
(G) Section 61.151;
(H) Section 61.152; and
(I) Section 61.154.

All are as adopted as final rules by the EPA on or before December 14, 2000 and Appendix C of Title 40, Code of Federal Regulations, Part 763, Subpart E as adopted as interim final rule by the United States Environmental Protection Agency on or before February 3, 1994. The Commission, within 180 days after the date of promulgation of any new or revised Federal regulations pertaining to National Emissions Standards for Hazardous Air Pollutants or the TSCA Asbestos Model Accreditation Plan, shall conduct rulemaking with reference to this regulation to adopt such provisions. Such new or revised federal regulations, upon the date of their publication as final rules of the EPA, shall constitute minimum guidelines to the Commission in formulating rulemaking proposals to this regulation but shall not be construed to limit or to interfere with the adoption of provisions more stringent than Federal regulations.
CHAPTER 24: RECIPROCITY

Reg. 21.2401 Reciprocity

(A) Individuals applying for an initial certification under this regulation who have not received training in accordance with this regulation by training providers licensed by the Department must submit:

(1) An original certificate of completion of a discipline specific training certificate issued by an EPA approved trainer, and

(2) An original certificate of completion of a two hour Arkansas Awareness class taught by an Arkansas licensed training provider.

(B) In lieu of past certificates, an applicant may submit the most current training certificate and a copy of a certificate for a current asbestos certification by a state or territory or tribe to which EPA has delegated authority, similar to the delegation to Arkansas, as described in Reg. 21.201 (B) of this regulation.
CHAPTER 25: REVIEW OF ACTIONS

Reg. 21.2501 Review of Actions

As provided in Section IV of the Act, an aggrieved party to any action taken under the authority of the Act of this regulation by the Director of the Department, with respect to licenses and certificates, shall have rights of redress as provided in Part I of the Arkansas Water and Air Pollution Control Act, as amended, including but not limited to, Ark. Code Ann. § 8-4-218 and the Arkansas Pollution Control and Ecology Commission Regulation No. 8.

RE: Regulation No 21, Asbestos Abatement Regulation - FINAL FILING.

Dear Ms. Davis:

I am enclosing the following for filing with your office:

1. One (1) hard copy of the amendment to Regulation No 21, Asbestos Abatement Regulation.
2. One (1) copy of Commission Minute Order No. 15-15
3. One (1) copy of the Financial Impact Statement.

Please provide written confirmation of your receipt of these materials by file-marking the enclosed copy of this letter and returning it to me.

Thank you for your assistance in this matter.

Respectfully,

Charles Moulton
Administrative Law Judge
