RE: Total Residual Chlorine
NPDES Permit AR0022063

Dear Sir or Madame:

As required by Part I Section B of the above referenced permit, this letter shall serve as Springdale Water Utilities' report on our progress toward compliance with Final Effluent Limitation for Total Residual Chlorine.

Our laboratory has continued to demonstrate capability and proficiency using HACH Method 10014 for ultra-low chlorine analysis. Springdale Water Utilities began monitoring chlorine residual at its outfall using this ultra-low chlorine analytical methodology on January 1, 2023. All analytical results for the year to date have been below the specified permit limit of 0.011 mg/L and have verified our ability to meet the final limitation using the current method of disinfection.

If you have any questions or need additional information, please contact Jennifer Enos at (479) 756-3657 or jenos@springdalewater.com.

Sincerely,

Heath Ward
Executive Director
Springdale Water Utilities
