## Regional Wastewater Treatment Plant

320 Davidson Drive Hot Springs, Arkansas 71901

Phone: (501) 262-1125

Good afternoon Mrs. Allen-Daniel,

I hope your day is going well. I want to update you on what is going on here at the Davidson Wastewater Treatment Plant. Construction is entering its final stages for the 'Aqua- Aerobic' cloth filter system just before UV disinfection. Once the project is complete, it will improve our process.

The City of Hot Springs is working with Crist Engineers on several projects that will greatly improve the Davidson Treatment Facility. Upcoming projects include a new Secondary Clarifier, upgrading Blowers and Diffusers in our Aeration Basin, new piping throughout the plant and a new chemical feed building.

Finally, we are not unlike the rest of the region, there has been an excessive amount of rainfall in the area. Our Equalization Pond has been in use most of the year. It is our hope that, very soon, we will return to dry weather and lower flows.

Sincerely,

A handwritten signature in black ink, appearing to read "Harold Mauldin". The signature is fluid and cursive, with a long horizontal stroke at the end.

Harold Mauldin  
Facilities Operations Manager
