Davidson Wastewater Treatment Plant

320 Davidson Drive Hot Springs, Arkansas 71901

Phone: (501) 262-1125

Dear Mrs. Allen-Daniel,

I want to update you on construction at the Davidson Wastewater Treatment Plant. We hope to have the 'Aqua-Aerobic' cloth filter system online very soon. As previously stated, once the new filter system is online, the effluent process will greatly improve especially when it comes to Total Suspended Solids (TSS). Sixty-five percent of non-compliances this year have come from (TSS).

Haren Construction installed the 54" pipe north of UV Disinfection. There were delays receiving supplies (ductile iron fittings, flanges, etc.) from suppliers for various reasons; thus the delay in completing this project. Haren has increased work hours and with the decrease in rainfall; the project is moving ahead.

The Aqua-Aerobic filters will be a welcome addition to the treatment process. Installed just prior to UV disinfection, the filters will reduce TSS and will serve as an additional step to reduce Bio-Chemical Oxygen Demand (BOD).

Sincerely,

Harold Mauldin
