Permit # AR0033880

Dear Mrs. Barnett

Per our conversation March 13th, 2015 concerning the results of February bio monitoring tests (Chronic Pimphales). It was determined that pathogen interference is the problem. As at this time due to weather related high flows we were not able to retest before the end of the quarterly period.

We plan on the recommended side by side treated and untreated test be run on the next quarter sampling schedule.

I'm not sure if I have completed the DMR correctly, if am in error on any part or more information is needed please call me.

Thank You

James B Sorrells
