November 21, 2006

Mr. Mo Shafii  
Arkansas Department of Environmental Quality  
NPDES Branch, Water Division  
8001 National Drive  
Little Rock, AR 72209

**Razorback Pipeline**  
**Rogers, AR**

Dear Mr. Shafii,

I spoke with you on November 17, 2006 concerning storm water discharges from the newly constructed land farm at the Razorback Pipeline Rogers facility.

During that conversation, you indicated the discharge would be covered under General Permit ARG790000 (Dischargers of Treated Groundwater/Surface Water Resulting from Cleaning of Groundwater/Surface Water which May Have Been Contaminated with Petroleum Fuels).

Enclosed is a completed Notice of Intent, along with check number 0009960 in the amount of \$500.00 covering permit fees.

You said during our telephone conversation that permit approval could be obtained in less than one week. We would be very appreciative if you would accelerate the approval process and issue the permit as quickly as possible.

If you have any questions, please call me at 770/518-3671 or by e-mail [bcastleberry@transmontaigne.com](mailto:bcastleberry@transmontaigne.com)

Thank you again for your assistance with the permit issuance.

Sincerely,

A handwritten signature in black ink that reads "Barbara Castleberry". The signature is fluid and cursive.

Barbara Castleberry  
Environmental Coordinator

### Water Flow Through Treatment Process

Water will be directed from the stormwater collection point in the northeast section of the landfarm bermed area. Stormwater will be recovered from the collection point via a pneumatically operated pump and transferred to a storage tank located within the landfarm bermed area. The stormwater will settle in the storage tank and then be transferred from the tank through a bag filtration unit and a granular activated carbon (GAC) treatment vessel via piping and a separate pneumatic pump.

Following treatment in the GAC vessel, the water will then be directed to a second tank for storage. A sample of the treated water from the second tank will be submitted to a laboratory for analysis of Total Petroleum Hydrocarbons via EPA Method 8015M. The initial tank of treated water will also be sampled for benzene, toluene, ethylbenzene, and total xylenes (BTEX) via EPA Method 8021 and field screened for pH. Analytical results will be submitted to the Arkansas Department of Environmental Quality (ADEQ) for approval to discharge. Once approved, the water will be discharged to the surface in compliance with the ADEQ issued permit.

To complete this task, the following **will be required**:

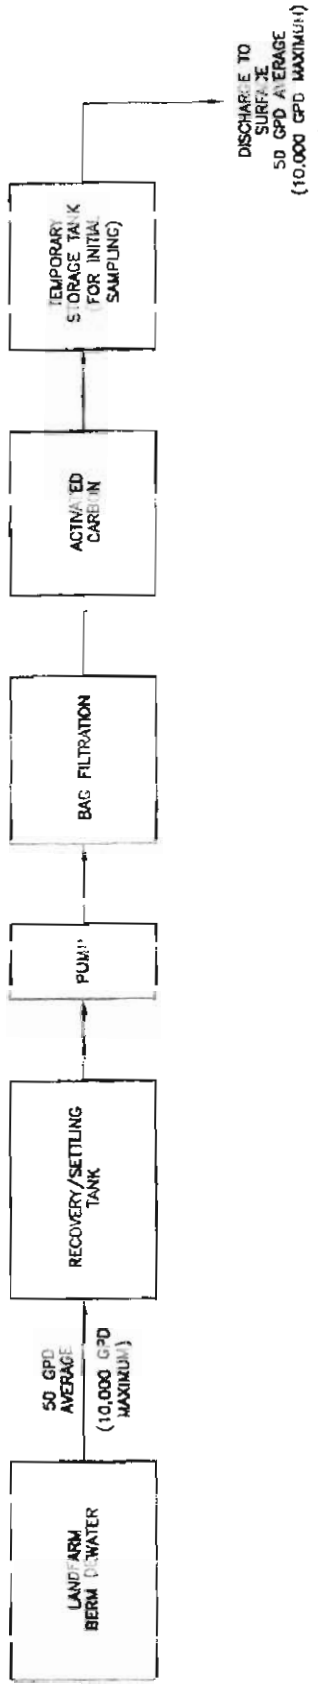

Two storage tanks;

Two pneumatic pumps and associated piping for transferring water between the recovery/settling tank, and for water transfer through the treatment system;

Water filtration and treatment system;

Disposal (including transportation) of treatment media (activated carbon) when required;

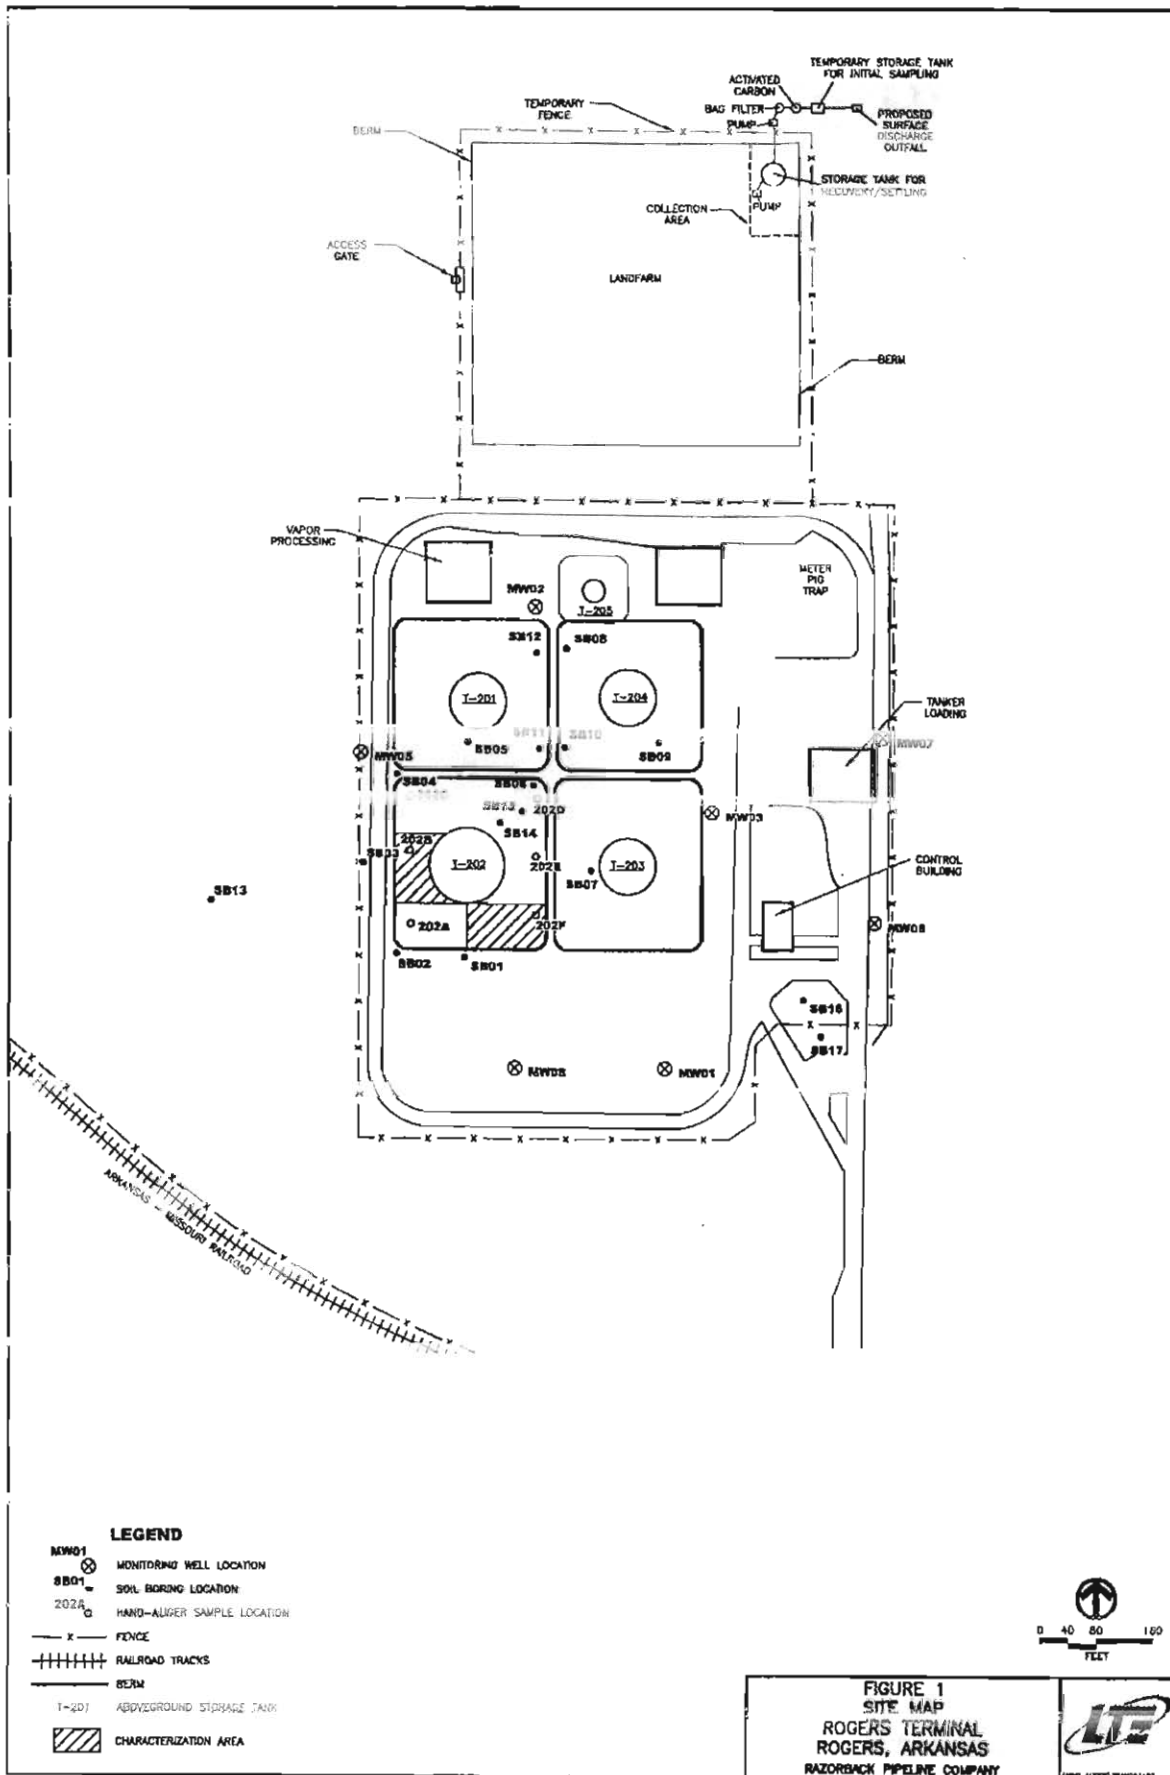

Disposal of treated water via surface discharge, including completion of required ADEQ discharge compliance reports.
