Complaint Investigation and Illegal Dump Worksheet Attachment

	cation: Bruner Ivory Handle Mill 500 N ırel, Hope, Ar.	County: Hempstead						
Inspector: Sheldon Hadley		Date: 6-6-06						
	Follow-Up Investigation	PDS ID:	Access ID:					

Comments:

6-6-06

I received an E-mail from Mary Pearson (ADEQ Hazardous Waste) thru Heid Love (ADEQ Solid Waste Supervisor) regarding a possible solid waste issue at the Bruner Ivory Handle Mill in Hope, Ar. This facility is no longer in operation. I spoke with Ronnie Smith (ADEQ Water Inspector) who stated that he had been out with Mary Pearson and the Hope Code enforcement officer to the site. I then went to the site where I noted that the facility well fenced and behind a locked gate. I then went around to the south side of the property where I could see a portion of the area in question. I noted what appeared to be mostly wood waste with some other miscellaneous items.

I have attached a copy of the NPDES Compliance Inspection performed by Ronnie Smith.

At this point the situation is being handled by the people mentioned above. I will assist in the future if needed.

FURTHER ACTION TAKEN/TO BE TAKEN

Section D: Summary of Findings/Comments (Attach additional sheets if necessary) This reconnaissance inspection was done at the request of the NPDES Storm Water Section. The Bruner Ivory handle Company had requested to terminate the Industrial Storm Water Permit. The facility had ceased operations in late 2004.															
This facility was in the wood handle making business. It had been in business in Hope for at least 70+ years. The property looked as if everyone dropped what they were doing and walked away the last day of operations.															
For findings see attached page 2									2

Findings: The facility had left numerous barrels of what appeared to be paint and oil outside of any buildings in the weather. There was a hydraulic pump unit that still had oil in the tank. This tank was uncovered and had exposure to the elements. There was a truck loading dock below ground level that was full of water and old pallets. In front of the shop area there were several barrels of oil that were not contained. One of the buildings was used as a power house until the early 60's. The facility generated electricity by burning the waste wood. This electricity was used by the facility and sold to a local power company. Lightning struck the building and knocked out the system. It was never rebuilt. At the time of the inspection, the roof over the area was gone. Inside there were two turbines. Both of these were over a pit that was full of oily, rusty looking water. These pits at one time held oil to cool the turbines. No one knows what happened to the oil. There was a building where the handles were dipped in the varnish. This was done in two pits. These pits have dried varnish in and around them. There is a 12000-15000 gallon storage tank connected to this building by pipes. This tank is in an unsecured location outside the security fence. This whole property is approximately 25 acres. Most all of the buildings are old and not very structurally sound. In some cases the metal roofs are about to come off.

It is my opinion that the Hazardous Waste Division be contacted because of what is and what may be inside the buildings.
