

The staff has reviewed the transcript of the public hearing on the construction grants priority system and list held September 24, 1980. Based on that review the staff is recommending that the wording be changed in the Line Work Eligibility section of the Priority System. Condition (3) of that section should read "Construction of new interceptors where an increased federal share for such new interceptors is found by the Department to be necessary to assure viability of the most cost-effective means of meeting an enforceable provision of the Federal Water Pollution Control Act."

This change substitutes the word "Department" for the word "Commission".

By this minute order the Commission on Pollution Control and Ecology approves the 1980 construction grants priority system and list as presented at the public hearing but with the incorporation of the staff recommendation made above.
