

The Commission hereby approves the permit applications submitted by the following firms, subject to the provisions of the Solid Waste Management Act, the Solid Waste Management Code, and the permit terms and conditions.

Mr. Jerry Miller

Name of facility - Miller Construction Sanitary Landfill

Additional Conditions - This permit shall expire when the approximate 16.8 acre disposal area described in the final engineering plans has been filled to design capacity. Proper preparation of the site shall be supervised and reported in writing to the Department by a Registered Professional Engineer prior to placement of any waste in the landfill. Only wastes listed in the narrative submitted with the engineering design shall be accepted at the site and only in the areas designated for each type of waste. Salvage operations shall be restricted to the material described in the engineering narrative and to the area outlined in the engineering drawings. A privacy fence or earthen berm shall be constructed along Highway 5 (northern border of the site) within 60 days of the date of issue of the permit. The construction of the fence or berm will be sufficient to insure that the operation will not be visible from Highway 5. Each phase of the operation as described in the engineering design shall be inspected by a Registered Professional Engineer and a report submitted to this office prior to commencement of the next phase. This report will include methods for supervision of drainage control and closeout of all previously utilized areas. Waste streams 1-3, as defined in the narrative, will be covered monthly. Waste streams 4-8 will be covered at the close of the day on which they are deposited.
