

ARKANSAS DEPARTMENT OF
POLLUTION CONTROL AND ECOLOGY

LOCATION - SUBJECT: Revision

MINUTE ORDER NO. 81-61

of SIP to Include ENSCO
PAGE 1 OF 1 PAGES

Findings:

Pursuant to the requirements of the Clean Air Act, the State Implementation Plan was revised in 1975 to provide for attainment of the National Ambient Air Quality Standards for Total Suspended Particulates (TSP). To accomplish these requirements, regulations were developed, entitled the Regulations of the Arkansas Plan of Implementation for Air Pollution Control, that established allowable emission limitations for sources that would have an impact on the attainment and maintenance of the National Ambient Air Quality Standards. A list of these major sources were included in the regulations with allowable particulate emission rate per stack. At the time, a few sources were inadvertently left out. Energy Systems Company of El Dorado (ENSCO) was one of the sources that was not included in the regulations.

Therefore, revision of Section 8 of the Regulations of the Arkansas Plan of Implementation is necessary to include ENSCO.

Order:

Section 8 of the Regulations of the Arkansas Plan of Implementation for Air Pollution Control be amended to include ENSCO.
