

Federal funding schedules require the construction of buildings associated with the proposed 155 mm M687 GB2 Binary Production Facility at the Pine Bluff Arsenal to commence prior to the development of detailed plans for the construction, installation and operation of the process and control equipment to be located in said buildings.

To establish a definite procedure for permitting the proposed facility in view of the aforementioned funding schedules, the Commission hereby grants approval only for the construction of buildings currently proposed as the Binary Production Facility. No process or control equipment for said facility may be installed or operated until such time that all permits required under the laws and regulations administered by the department of Pollution Control and Ecology have been issued in accordance with such laws and regulations. It is anticipated that construction of buildings will commence in September, 1981 and permit applications for the construction and installation of the associated production process and control equipment will be submitted by mid 1982.
