

Findings:

To satisfy the requirements of the Clean Air Act the department is proposing to revise section 3 and 5 of the State Implementation Plan to incorporate by reference the Federal revised stack height regulation, Code of Federal Regulation 40, 51.1 (HH)-(KK). The new regulations redefines "excessive concentration," "dispersion techniques," and certain other important concepts. There is also a modification to some of the bases for determining the "good engineering practice" stack height for all sources to which this regulation applies. A public hearing was held on May 12, 1986, to receive comments on the proposed revision.

Order:

Section 3 and 5 of the State Implementation Plan is hereby revised to incorporate by reference the changes in the federal regulations at 40 CFR 51.1 (HH)-(KK)
