EXHIBIT A

BLACKLINE VERSION OF APCEC REGULATION NO. 2 SHOWING PROPOSED AMENDMENT

ARKANSAS POLLUTION CONTROL AND ECOLOGY COMMISSION

REGULATION NO. 2

REGULATION ESTABLISHING WATER QUALITY STANDARDS FOR SURFACE WATERS OF THE STATE OF ARKANSAS

INITIAL DRAFT

Submitted to the Arkansas Pollution Control and Ecology Commission on April 23, 2010

banks and/or bottoms of the watercourses or adversely affect any of the associated biota. As a guideline, oil and grease shall not exceed 10 mg/l average or 15 mg/l maximum when discharging to surface waters. No mixing zones are allowed for discharges of oil and grease.

Reg. 2.511 Mineral Quality

(A) Site Specific Mineral Quality Criteria

Mineral quality shall not be altered by municipal, industrial, other waste discharges or instream activities so as to interfere with designated uses. The following limits apply to the streams indicated, and represent the monthly average concentrations of chloride (Cl), sulfate (SO_4^-) and total dissolved solids (TDS).

<u>Stream</u>	Concentration-mg/L

ER - ecoregion standard

- * based on critical background flow of 4 cfs
- ** These limits shall apply to all tributaries of Bayou Meto and Bayou Two Prairie listed in Appendix A Any modification of these values must be made in accordance with Reg. 2.306.

(B) Ecoregion Reference Stream Minerals Values

The following values determined from Arkansas' least-disturbed ecoregion reference streams are considered to be the maximum naturally occurring levels. For waterbodies not listed above, any discharge which results in instream concentrations more than 1/3 higher than these values for Cl and SO_4^- or more than 15 mg/l, whichever is greater, is considered to be a significant modification of the water quality. Similarly, such modification exists if the following TDS values are exceeded after being increased by the sum of the increases to Cl and SO_4 . Such modifications may be made only in accordance with Reg. 2.306.

CALCULATED ECOREGION REFERENCE STREAM VALUES (mg/l)

Ecoregion	Chlorides	Sulfates	TDS
Ozark Highlands	17.3	22.7	250
Boston Mountains	17.3	15	95.3
Arkansas River Valley	15	17.3	112.3
Ouachita Mountains	15	20	142
Gulf Coastal Plains	18.7	41.3	138
Delta	48	37.3	411.3

(C) Domestic Water Supply Criteria

In no case shall discharges cause concentrations in any waterbody to exceed 250, 250 and 500 mg/l of chlorides, sulfates and total dissolved solids, respectively, or cause concentrations to exceed the applicable limits in the streams to which they are a tributary, except in accordance with Reg. 2.306.

Reg. 2.512 Ammonia

Total ammonia nitrogen (N) shall not exceed those values and frequency of occurrence established in the following tables:

(A) The one-hour average concentration of total ammonia nitrogen shall not exceed, more than once every three years on the average, the acute criterion as shown in the following table:

Blue Point Ditch- - chlorides 95 mg/l; sulfates 45 mg/l Big Ditch – chlorides 95 mg/l; sulfates 45 mg/l Main Ditch – chlorides 95 mg/l; sulfates 45 mg/l Plum Bayou- chlorides 95 mg/l; sulfates 45 mg/l Crooked Creek Ditch - chlorides 95 mg/l; sulfates 45 mg/l Indian Bayou Ditch - chlorides 95 mg/l; sulfates 45 mg/l Caney Creek Ditch – chlorides 95 mg/l; sulfates 45 mg/l Salt Bayou Ditch – chlorides 95 mg/l; sulfates 45 mg/l Bradley Slough – chlorides 95 mg/l; sulfates 45 mg/l Tupelo Bayou – chlorides 95 mg/l; sulfates 45 mg/l Dennis Slough – chlorides 95 mg/l; sulfates 45 mg/l Buffalo Slough – chlorides 95 mg/l; sulfates 45 mg/l Flynn Slough – chlorides 95 mg/l; sulfates 45 mg/l Boggy Slough - chlorides 95 mg/l; sulfates 45 mg/l Bear Bayou - chlorides 95 mg/l; sulfates 45 mg/l Bubbling Slough – chlorides 95 mg/l; sulfates 45 mg/l Five Forks Bayou - chlorides 95 mg/l; sulfates 45 mg/l Government Cypress Slough – chlorides 95 mg/l; sulfates 45 mg/l Brushy Slough – chlorides 95 mg/l; sulfates 45 mg/l Tipton Ditch – chlorides 95 mg/l; sulfates 45 mg/l Hurricane Slough – chlorides 95 mg/l; sulfates 45 mg/l Newton Bayou – chlorides 95 mg/l; sulfates 45 mg/l West Bayou – chlorides 95 mg/l; sulfates 45 mg/l

Brownsville Branch-chlorides 95 mg/l; sulfates 45 mg/l

Eagle Branch—chlorides 95 mg/l; sulfates 45 mg/l

<u>Unnamed tributary to Big Creek — chlorides 71 mg/l, sulfates 60 mg/l, TDS 453 mg/l (D-1, #38)</u>

<u>Big Creek from mouth of unnamed trib to Whistle Ditch — chloride 58 mg/l, sulfates 49 mg/l (D-1, #39)</u>

<u>Bayou DeView from Whistle Ditch to AR Hwy 14 — chloride 48 mg/l, sulfates 38 mg/l, TDS 411.3 mg/l (D-1, #40)</u>

Bayou DeView from AR Hwy 14 to its mouth - chloride 48 mg/l, sulfates 37.3 mg/l, TDS 411.3 (D-1. #41)

^{*} Increase over natural temperatures may not be more than 2.8°C (5°F).

^{**} When water temperatures exceed 22°C, the critical season D.O. standard may be depressed by 1 mg/l for no more than 8 hours during a 24-hour period.

Plate D-1 (Delta)
