Subject: Opposition to CAFO in Buffalo River watershed

Water quality, Economy, and Public Health

To whom it may concern:

Please accept this note as a firm voice of concern regarding the current placement of a CAFO in the immediate watershed of the Buffalo National River.

This is unacceptable for the people and future of Arkansas. The CAFO must be moved outside of this sensitive area to protect our long term Economy, Public Health, and Water Quality. The clear water of the Buffalo generates millions of dollars to this state annually, and hog FECES juice significantly compromises America's 1st National River.

Arkansas cannot gamble these ESSENTIAL qualities / resources for the smaller, short term gains of the handful of jobs created by the CAFO. Keeping a CLEAN river will keep hundreds employed through the area's rich tourism economy.

Thank you.
