Subject: Proposed changes to regulations 5 & 6

I support the proposed changes to Regulation 5 and Regulation 6.

I also support our farmers. Without farmers, we would not have food. I do not, however, support Cargill's brand of corporate farming. It is a cruel, nasty way in which to raise meat. A CAFO in Karst terrain makes no sense to me. Cargill does not care about our clean water, or our way of life here in the Ozarks. Does ADEQ care about our exceptional water? Allowing a CAFO to be operated in Karst terrain 6 miles from our only National river, The Buffalo, tells me "no" .

The proposed changes to regulations 5 & 6 are meant to keep more CAFO's from being built here. I live in the Kings river watershed in Carroll County, AR. I feel our all watersheds are at risk now that Cargill has a foothold. Arkansas's regulations should be changed, not to put our family farmers out of business, but to protect our water quality, our public health. I want my grandchildren to enjoy the rivers of this area like I do.

Any risk of contamination in our rivers is not worth it!!

Thank you,

Glenda Allison
