Subject: CAFO regulation proposals

Doug Szenher

Arkansas Depart. of Environmental Quality Public Outreach & Assistance Division

Dear Mr Szenher:

The ADEQ is entertaining regulations to limit CAFO in Arkansas, specifically in the watershed of the Buffalo River.

This is an important protection for an environmentally sensitive resource for the State. It is surprising how many Arkansans rely on the Buffalo River as the source of some or all of their incomes through recreation and eco-tourism.

And the proposal also affords the smaller family farmer some protections.

The wisdom of the ADEQ in adopting its proposed protection is as important to the preservation and enjoyment of the Buffalo River as the original acts creating the Buffalo National River.
