Subject: Amending Regulations 5 & 6

I am in support of third party intervention to amend Regulations 5 & 6 and the banning of the CAFOs in the watershed of the Buffalo River.

From the medium and large scale hog farms, I am concerned that residues of the excrement from the thousands of pigs will make its way to the Buffalo River via gravity flow thru the nooks and crannies of the karst geology of the region. Microorganisms that are harmful to people can use the excrement as a nutritional source to expand their numbers. If the water quality in the Buffalo River were reduced, it could have a negative economic impact on the tourism of people who spend money on their visits to the river.

My family & I have enjoyed paddling & hiking along the Buffalo. We sure would not like to see its water quality diminished.

Respectfully,

Eddie Vollman
