

To Arkansas DEQ:

I am an Arkansas resident who lives near the Buffalo River and I'm disgusted that a CAFO has been approved and is operating in the Buffalo River watershed. I can't imagine a worse location for such an industry, does karst geology have a meaning to the Arkansas permitters? It is imperative that no CAFO's exist in this pristine watershed, please revoke the permit issued to C & H Farms. In addition all CAFO's in the Buffalo River watershed should be prohibited by regulation.

In the future I would expect the ADEQ to do a much better job of maintaining environmental quality in our beautiful state!
