<b>Your connection to Arkansas waters</b>	I live very close to the Buffalo River and am on the Board of the Buffalo National River Partners. I lead river cleanups every year. I am planning to have a cleanup on the lower river in September, but with the major algae bloom there I am very concerned about exposure to those blooms. This was never a problem before.
<b>Has nuisance algae affected your recreation experiences?</b>	Yes
<b>How are you affected by Arkansas Water Quality</b>	I am an Arkansas resident. I recreate on or near a river, lake, or stream. While I don't own property near the river, I do love near it
<b>Nuisance Algae</b>	
<b>Provide specific information about the waterbody or waterbodies where nuisance algae have been observed.</b>	I have not been to the lower river this year, but am planning a cleanup soon.
<b>Habitat Degradation</b>	
<b>Have declines to physical habitat impacted your recreation experiences?</b>	Yes

**How are you impacted by water quality degradation attributed to habitat declines?**

Worry about cleanups

### **Categorical Determinations**

**Do you believe in state-led local approaches?**

Yes, if the agency does what the law requires

**Do you think it is important to ensure federal regulations are met when proposing a plan to restore significant state and federal natural resources, such as the Buffalo National River?**

Yes

**Do you believe it is important for any plan to include both point and nonpoint sources of pollution?**

Yes

**At this time, do you believe ADEQ should follow the Clean Water Act and federal regulations to prioritize impaired waterbodies for a TMDL until they have provided adequate recommended documentation (2016 IRG) and met all legal requirements (40 CFR 130.7)?**

Yes

### **Federal Requirements**

**Do you believe ADEQ should consider peer-reviewed literature, tax-payer funded research, expert**

<p><b>reports, and agency recommendations to identify and report water quality impairments?</b></p>	<p>Yes</p>
<p><b>35% of variable 106 Grant Funding received by the state each year is dependent on impairment listings. When assessment methodologies are lacking or absent, how should the state proceed with assessment decisions?</b></p>	<p>Even though I understand I would have the opportunity to review justifications and provide public comments on any 303(d) listings utilizing best professional judgement and a weight-of-evidence approach, I do not support ADEQ making any case-by-case decisions when methodologies were not predetermined.</p>
<p><b>How strongly do you feel that designated Outstanding National Resource Waters (e.g., Buffalo, Strawberry, Spring, Eleven Point, and Mulberry Rivers) should be allowed to violate water quality standards LESS frequently than channelized streams (aka ditches)?</b></p>	<p>Very strongly. We have a limited number of waters with ONRW designations in the state. As "The Natural State" we should hold our most protected waters to a higher level of expectation.</p>
<p><b>When numeric criteria do not exist, and narrative descriptions of water quality standards are in place, how do you think the state should proceed with assessments?</b></p>	<p>Consider all relevant data and information and take a weight-of-evidence approach to developing a determination. The state must provide a rationale and supporting documentation with assessment decisions. As long as the state is forthcoming and transparent, I believe best professional judgement, supported with scientific evidence, has an appropriate place in this regulatory process.</p>
<p><b>States are required to develop their lists based on EPA approved Water Quality Standards. Although states may anticipate changes,</b></p>	

**states are not allowed to incorporate revised criteria until EPA has approved them for Clean Water Act purposes (e.g., development of list of impaired waters). Do you think this federal requirement is important to follow?**

Yes. The EPA approval process ensures water quality standards are backed by defensible science. This is essential for protecting and restoring water quality.

**Do you believe pictures should be considered for determining if water quality criteria are being met, such as determining whether algae have reached "objectionable" densities?**

Yes

**Do you think waterbodies should be listed as impaired when scientifically defensible research confirms population declines to federally threatened and endangered species?**

Yes. Of course. Properly identifying waters is important to the recovery of imperiled species.

**Additional Comments**

**Will you be submitting pictures to ADEQ in a separate email or have you already?**

No

**Do you wish to grant White River Waterkeeper permission to post your comments on our website?**

No

**Do you think ADEQ should post comments on their**

**website as they come in, and as is standard protocol for other administrative procedures carried out by the Department?**

Yes. This is important to public transparency, allows commenters to ensure their comments were received, and serves as a valuable resource to the public and press.

**Do you have any scientific reports or studies that you wish to submit to ADEQ to supplement your comment record?**

No
