Waterbody Public Comment;

ADEQ, I am asking the department to please list the Buffalo National River as a Category 5 impaired stream. Nothing is accomplished with a Category 4 listing as it requires no action. If the source of the pollution is not identified how do you correct the condition? The algal bloom is growing. The bloom is destroying life in the River, not to mention the health issues and economic impact including our Natural State reputation. Please change the category to 5.

With Respect

Frieda Schroder
