This spreadsheet provides a list of terms defined and each instance a term is used in each of the following three APC&EC Regulations: 18, 19, and 26. Each regulation has its own tab. Each term defined in the regulation (whether in Chapter 2 or in any other chapter) has its own row. For each term, this spreadsheet provides the definition(s) included for the term in the regulation as well as all of the instances of that term in Regulations 18, 19, and 26.

Items highlighted in Yellow are definitions that were found outside of Chapter 2 of each regulation.

(d) Volatile organic compounds are presumed not to be precursors to PM2.5 in any attainment or unclassifiable area, unless Arkansas demonstrates to the Administrator's satisfaction or EPA demonstrates that emissions of volatile organic compounds from sources in a specific area are a significant contributor to that area's ambient PM2.5 concentrations.

(2) Any pollutant that is subject to any standard promulgated under Section 111 of the Act as of July 27, 2012;

(3) Any Class I or II substance subject to a standard promulgated under or established by Title VI of the Act;

(4) Any pollutant that otherwise is subject to regulation under the Act;

(5) Notwithstanding paragraphs (B)(1) through (4) of this section, the term regulated NSR pollutant shall not include any or all hazardous air pollutants either listed in Section 112 of the Act, or added to the list pursuant to

sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, ten (10) tons per year (tpy) or more of any hazardous air pollutant which has been listed pursuant to section 112(b) of the Act, twenty-five (25) tpy or more of any combination of such hazardous air pollutants, or such lesser quantity as the Administrator may establish by rule. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources; or (2) For radionuclides, "major source" shall have the meaning specified by the Administrator by rule.

(B) A major stationary source of air pollutants, as defined in section 302 of the Act, that directly emits or has the potential to emit, 100 tpy or more of any regulated air pollutant (including any major source of fugitive emissions of any such pollutant, as determined by rule by the Administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of section 302(j) of the Act, unless the source belongs to one of the following categories of stationary source:

- (1) Coal cleaning plants (with thermal dryers);
- (2) Kraft pulp mills;
- (3) Portland cement plants;
- (4) Primary zinc smelters;
- (5) Iron and steel mills;
- (6) Primary aluminum ore reduction plants;
- (7) Primary copper smelters;
- (8) Municipal incinerators capable of charging more than 250 tons of refuse per day;

(C) A major stationary source as

defined in part D of title I of the Act, including:

(1) For ozone nonattainment areas, sources with the potential to emit one hundred (100) tpy or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate," fifty (50) tpy or more in areas classified as "serious," twenty-five (25) tpy or more in areas classified as "severe," and ten (10) tpy or more in areas classified as "extreme"; except that the references in this paragraph to 100, fifty (50), twenty-five (25), and ten (10) tpy of nitrogen oxides shall not apply with respect to any source for which the Administrator has made a finding, under section 182(f)(1) or (2) of the Act, that requirements under section 182(f) of the Act do not apply;

(2) For ozone transport regions established pursuant to section 184 of the Act, sources with the potential to emit fifty (50) tpy or more of volatile organic compounds;

(3) For carbon monoxide nonattainment areas

(a) that are classified as "serious;" and

(b) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the Administrator, sources with the potential to emit fifty (50) tpy or more of carbon monoxide; and

(4) For particulate matter (PM10) nonattainment areas classified as "serious," sources with the potential to emit seventy (70) tpy or more of PM10.
