**Section D: Summary of Findings/Comments (Attach additional sheets if necessary)**

This SSO inspection was conducted due to extensive flooding (100 yr. flood) of the Black River in Pocahontas. Two of the city's main pump stations are located adjacent to the river in the floodplain.

City employees had done an excellent job of sandbagging around the pump stations to prevent flood water from damaging the electrical equipment and entering the wet wells.

The pumps appeared to be adequately handling the large amount of I&I resulting from a partially submerged collection system.

No letter will be sent.
