<b>SUMMARY OF FINDINGS</b>						
No violations were noted at the time of the inspection.						
<b>GENERAL COMMENTS</b>						
Discharge monitoring reports for 2014 were reviewed. No effluent violations were reported during this period. According to treatment plant flow records, the facility experiences high wet weather flows due to infiltration and inflow. The Operator reported that significant wet weather flows periodically result in hydraulic overloads of the activated sludge treatment unit causing a wash-out of solids onto the sand filter beds. No effluent violations occurred during these events. Facility records were well-organized and complete.
