6. REVIEWER'S NOTES:

This is a Title V renewal for the facility. In this renewal, the facility is requesting the following changes:

- Replace all references to "Prime-Line" with "Moulding Department".
- Increase maximum hours of operations assumed in emission calculations from 8400 hr/yr to 8760 hr/yr and revise emission limits in the permit.
- Increase permitted hours of operation for SN-35B to from 100 hours to 500 hours.
- Increase VOC emission limit for SN-101, SN-102, and SN-103 based on new projected maximum primer usage.

- Update NESHAP DDDD conditions to account for changes in the regulation. The facility’s permitted annual emissions are increasing by 1.0 tpy PM/PM₁₀, 30.9 tpy VOC, 0.3 tpy CO, 0.4 tpy NO_x, 0.08 tpy acetone, 1.63 tpy acetaldehyde, 2.01 tpy formaldehyde, 1.61 tpy hexane, 2.19 tpy methanol, 1.61 tpy MIBK, and 1.76 tpy phenol.

7. COMPLIANCE STATUS:

As of December 8, 2021, there are no compliance issues with the facility. ECHO (<https://echo.epa.gov/detailed-facility-report?fid=110000597881>) shows no air violations identified as of February 3, 2021.

8. PSD/GHG APPLICABILITY:

a) Did the facility undergo PSD review in this permit (i.e., BACT, Modeling, etc.)? N
If yes, were GHG emission increases significant?

b) Is the facility categorized as a major source for PSD? N

- *Single pollutant ≥ 100 tpy and on the list of 28 or single pollutant ≥ 250 tpy and not on list*

If yes for 8(b), explain why this permit modification is not PSD.

9. SOURCE AND POLLUTANT SPECIFIC REGULATORY APPLICABILITY:

Source	Pollutant	Regulation (NSPS, NESHAP or PSD)
SN-37 & SN-38	N/A (natural gas-fired sources)	NSPS, Subpart Dc
	There are no specific emission limits or pollutants identified, but the rule generally regulates HAPs	NESHAP, Subpart DDDDD
Plantwide	HAPs	NESHAP, Subpart DDDD
SN-35B	CO PM NMHC + NO _x	NSPS, Subpart IIII

10. UNCONSTRUCTED SOURCES:

Unconstructed Source	Permit Approval Date	Extension Requested Date	Extension Approval Date	If Greater than 18 Months without Approval, List Reason for Continued Inclusion in Permit
N/A				

11. PERMIT SHIELD – TITLE V PERMITS ONLY:

Did the facility request a permit shield in this application? N

(Note - permit shields are not allowed to be added, but existing ones can remain, for minor modification applications or any Regulation 18 requirement.)

If yes, are applicable requirements included and specifically identified in the permit?
If not, explain why.

For any requested inapplicable regulation in the permit shield, explain the reason why it is not applicable in the table below.

Source	Inapplicable Regulation	Reason
The facility did not request a permit shield.		

12. COMPLIANCE ASSURANCE MONITORING (CAM) – TITLE V PERMITS ONLY:

List sources potentially subject to CAM because they use a control device to achieve compliance and have pre-control emissions of at least 100 percent of the major source level. List the pollutant of concern and a brief summary of the CAM plan (temperature monitoring, CEMs, opacity monitoring, etc.) and frequency requirements of § 64.

Source	Pollutant Controlled	Cite Exemption or CAM Plan Monitoring and Frequency
None of the control devices in the facility are subject to CAM because the emissions that enter the control devices are less than 100 tpy.		

13. EMISSION CHANGES AND FEE CALCULATION:

See emission change and fee calculation spreadsheet in Appendix A.

14. AMBIENT AIR EVALUATIONS:

The following are results for ambient air evaluations or modeling.

a) NAAQS

A NAAQS evaluation is not required under the Arkansas State Implementation Plan, National Ambient Air Quality Standards, Infrastructure SIPs and NAAQS SIP per Ark. Code Ann. § 8-4-318, dated March 2017 and the DEQ Air Permit Screening Modeling Instructions.

b) Non-Criteria Pollutants:

The non-criteria pollutants listed below were evaluated. Based on Department procedures for review of non-criteria pollutants, emissions of all other non-criteria pollutants are below thresholds of concern.

1st Tier Screening (PAER)

Estimated hourly emissions from the following sources were compared to the Presumptively Acceptable Emission Rate (PAER) for each compound. The Department has deemed the PAER to be the product, in lb/hr, of 0.11 and the Threshold Limit Value (mg/m^3), as listed by the American Conference of Governmental Industrial Hygienists (ACGIH).

Pollutant	TLV (mg/m^3)	PAER (lb/hr) = $0.11 \times \text{TLV}$	Proposed lb/hr	Pass?
Acetaldehyde	45.04	4.95	9.03	No
Acetone	1187	130	0.77	Yes
Cadmium	0.01	1.1E-03	0.04	No
Formaldehyde	1.5	0.165	11.21	No
Hexane	176.2	19.3	9.18	Yes
Methanol	262	28.8	12.09	Yes
MIBK	81.9	9.01	8.89	Yes
Phenol	19.2	2.11	9.81	No

2nd Tier Screening (PAIL)

AERMOD air dispersion modeling was performed on the estimated hourly emissions from the following sources, in order to predict ambient concentrations beyond the property boundary. The Presumptively Acceptable Impact Level (PAIL) for each compound has been deemed by the Department to be one one-hundredth of the Threshold Limit Value as listed by the ACGIH.

Pollutant	PAIL ($\mu\text{g}/\text{m}^3$) = 1/100 of Threshold Limit Value	Modeled Concentration ($\mu\text{g}/\text{m}^3$)	Pass?
Cadmium	0.1	0.050	Yes
Acetaldehyde	450.4	1.59	Yes
Formaldehyde	15	8.30	Yes
Phenol	192.0	18.73	Yes

c) H₂S Modeling:

A.C.A. §8-3-103 requires hydrogen sulfide emissions to meet specific ambient standards. Many sources are exempt from this regulation, refer to the Arkansas Code for details.

Is the facility exempt from the H₂S Standards Y

If exempt, explain: the facility does not have H₂S emissions.
