Section II: INTRODUCTION

Summary of Permit Activity

Farr APC manufactures emissions control equipment with a focus on large industrial filter housings (SIC Code 3479/3496) at 3501 Airport Road, Jonesboro, Arkansas. This modification will allow the facility to install and operate a metals coating operation identified as the Filter Tray Primer Station (SN-20). Also, High Bay Paint Booth #2 (SN-14 and 15) will be removed from the permit. The total annual permitted emissions will not change with this modification.

Process Description

The High Bay area at Farr APC is used to fabricate large filter housings. Metal stock is sheared or cut to size by sawing; it is then drilled or notched depending on the type of housing being produced. The metal is then rolled or formed to model specifications. At this point, the majority of the metal housing parts are steam cleaned at the High Bay area. The metal parts are welded together and then sandblasted (SN-03). Excess sand is cleared from the surface and the units are grinded to remove slag. Sources for PM/PM₁₀ emissions for the High Bay area include a plasma cutter and welding operations (SN-16 thru SN-19). The filter housings are then painted in the paint booths (SN-04, SN-05, SN-14, and SN-15). After painting, the units are assembled and tested to ensure proper function. Units are then crated and shipped to the customer. A metals coating operation identified as the Filter Tray Primer Station (SN-20) was installed with the permit modification 0810-AR-5. SN-20 will exhaust within the Low Bay portion of the facility, and it will be equipped with volatile organic controls.

Section III: PERMIT HISTORY

- 810-A This is the first operating permit (issued 3/2/88) for Farr Company at Jonesboro after purchasing the facility formerly owned by Crane Company. Processes include paint operations, curing, and welding to produce industrial filters.
- 810-AR-1 This permit modification (issued 7/9/90) covers the installation of a new spray paint booth and additional process equipment. A permitted emission rate was set for VOC emissions.
- 810-AR-2 This permit (issued 3/16/95) covers modifications at the facility that included the removal of several ovens and the increase in size of one paint booth and filter increase.
- 810-AR-3 This permit modification (issued 9/1/99) allowed Farr to construct new paint booths, raise the total allowable VOC content of the Low Bay Paint Booths (SN-01, 02, and 13) to 7.98 lb/gal, add new cutting and welding equipment, and remove an incinerator (SN-06). The permitted emissions were 6.4 tons per year (tpy) PM/PM₁₀, 75.0 tpy VOC, 24.5 tpy HAP (Total), and 9.5 tpy HAP (Individual).
- 810-AR-4 This permit modification allowed the facility to change the upper pressure drop limit in Specific Condition #12 from 2.25 inches of water to 4.0 inches of water at the dust collector (SN-03), and to add a powder coating process to the insignificant activities list under Categories A-1 and A-13. The permitted emissions remained unchanged: 2.8 tons per year (tpy) PM/PM₁₀, 75.0 tpy VOC, 24.5 tpy HAP (Total), and 9.5 tpy HAP (Individual).
