Elemental Environmental Solutions owns and operates a thermal treatment process at its facility located in Gum Springs, Arkansas. The facility has submitted a modification, minor modification, and administrative amendment to revise process description and permit language to reflect changes in the methods of operations at the facility (Specific Conditions 61-64 in particular the waste allowed to be added to SN-19), repurpose SN-32 (mobile baghouse) and install SN-39 (reagent silo) for a steel bunker mixing operation, and to add drum sampling operations to the Insignificant Activities list (A-13) respectively. The permitted emission

AFIN: 10-00004 Page 2 of 11

decreases are 5.55E-06 tpy Beryllium compounds and 4.51E-02 tpy Fluorides. Permitted emission increases are 0.01 tpy each of PM and PM<sub>10</sub>.

### 7. COMPLIANCE STATUS:

The following summarizes the current compliance of the facility including active/pending enforcement actions and recent compliance activities and issues.

Per the most recent inspection letter (dated June 14, 2018) there were no violations found during the last inspection. There was a concern/complaint regarding kiln feed and SC-62, which is being addressed in the R14 modification.

### 8. PSD APPLICABILITY:

- a) Did the facility undergo PSD review in this permit (i.e., BACT, Modeling, etc.)? N
- b) Is the facility categorized as a major source for PSD?
- Single pollutant  $\geq$  100 tpy and on the list of 28 or single pollutant  $\geq$  250 tpy and not on list

If yes, explain why this permit modification is not PSD.

### 11. AMBIENT AIR EVALUATIONS:

a) A NAAQS evaluation is not required under the Arkansas State Implementation Plan, National Ambient Air Quality Standards, Infrastructure SIPs and NAAQS SIP per Ark. Code Ann. § 8-4-318, dated March 2017 and the ADEQ Air Permit Screening Modeling Instructions..

### b) Non-Criteria Pollutants:

The non-criteria pollutants listed below were evaluated. Based on Department procedures for review of non-criteria pollutants, emissions of all other non-criteria pollutants are below thresholds of concern.

## 1<sup>st</sup> Tier Screening (PAER)

Estimated hourly emissions from the following sources were compared to the Presumptively Acceptable Emission Rate (PAER) for each compound. The Department has deemed the PAER to be the product, in lb/hr, of 0.11 and the Threshold Limit Value (mg/m³), as listed by the American Conference of Governmental Industrial Hygienists (ACGIH). As no pollutants increased, this data is from a previous revision.

Pollutant	TLV (mg/m <sup>3</sup> )	$PAER (lb/hr) = 0.11 \times TLV$	Proposed lb/hr	Pass?
Ammonia	17.41	1.92	15.98	N

# 2<sup>nd</sup> Tier Screening (PAIL)\*

AERMOD air dispersion modeling was performed on the estimated hourly emissions from the following sources, in order to predict ambient concentrations beyond the property boundary. The Presumptively Acceptable Impact Level (PAIL) for each compound has been deemed by the Department to be one one-hundredth of the Threshold Limit Value as listed by the ACGIH. As no pollutants increased, this data is from a previous revision.

Pollutant	PAIL $(\mu g/m^3) = 1/100$ of Threshold Limit Value	Modeled Concentration (μg/m³)	Pass?
Ammonia	200-Annual 3200-1 Hour	4.37=Annual 254.3=1 Hour	Y

Pollutant	PAIL ( $\mu$ g/m <sup>3</sup> ) = 1/100 of Threshold Limit Value	Modeled Concentration (μg/m³)	Pass?

Lead	0.5	0.00191	Y
Bromine	6.536	0.139	Y
Selenium	2.0	4.02E-3	Y

<sup>\*-</sup> None of these values changed during R12. Modeling is from previous permit revisions.

### c) H<sub>2</sub>S Modeling:

A.C.A. §8-3-103 requires hydrogen sulfide emissions to meet specific ambient standards. Many sources are exempt from this regulation, refer to the Arkansas Code for details.

Is the facility exempt from	n the H <sub>2</sub> S Standards	Y
If exempt, explain:	No Emissions	

Pollutant	Threshold value	Modeled Concentration (ppb)	Pass?
	20 parts per million (5-minute average*)		
$H_2S$	80 parts per billion (8-hour average) residential area		
	100 parts per billion (8-hour average) nonresidential area		

<sup>\*</sup>To determine the 5-minute average use the following equation

$$Cp = Cm (t_m/t_p)^{0.2}$$
 where

Cp = 5-minute average concentration

Cm = 1-hour average concentration

 $t_m = 60 \text{ minutes}$ 

 $t_p = 5 \text{ minutes}$
