#### STATEMENT OF BASIS

For the issuance of Draft Air Permit # 2305-AOP-R5 AFIN: 47-00991

#### 1. PERMITTING AUTHORITY:

Arkansas Department of Environmental Quality 5301 Northshore Drive North Little Rock, Arkansas 72118-5317

### 2. APPLICANT:

Big River Steel LLC 2027 E. State Hwy 198 Osceola, Arkansas 72370

#### 3. PERMIT WRITER:

Jesse Smith

### 4. NAICS DESCRIPTION AND CODE:

NAICS Description: Iron and Steel Mills and Ferroalloy Manufacturing

NAICS Code: 33111

#### 5. ALL SUBMITTALS:

The following is a list of ALL permit applications included in this permit revision.

| Date of Application | Type of Application          | Short Description of Any Changes      |
|---------------------|------------------------------|---------------------------------------|
|                     | (New, Renewal, Modification, | That Would Be Considered New or       |
|                     | Deminimis/Minor Mod, or      | Modified Emissions                    |
|                     | Administrative Amendment)    |                                       |
| 1/29/2019           | Modification                 | Increase of steel throughput at SN-01 |

#### 6. REVIEWER'S NOTES:

Big River Steel, LLC owns and operates a steel mill located at 2027 E. State Hwy 198 in Osceola, AR. This permitting modification is to increase the allowable production of steel from EAF I (SN-01) from 1,700,000 tons of steel per rolling twelve months to 2,050,000 tons of steel per rolling twelve months due to a higher demand for production. This modification resulted in the following permitted emission changes: increase of 14.5 tpy  $SO_2$ , increase of 11.1 tpy VOC, increase of 333 tpy CO, increase of 10 tpy  $NO_X$ , increase of 0.1 tpy of Lead, and increase of 53,130 tpy of  $CO_2e$ .

AFIN: 47-00991 Page 2 of 8

### 7. COMPLIANCE STATUS:

The following summarizes the current compliance of the facility including active/pending enforcement actions and recent compliance activities and issues.

The facility has some active/pending compliance issues for the air permit in regards to testing, reporting, and recordkeeping.

The facility also has an active variance in regards to the production increase that is included in this permit modification.

#### 8. PSD/GHG APPLICABILITY:

- a) Did the facility undergo PSD review in this permit (i.e., BACT, Modeling, etc.)? N If yes, were GHG emission increases significant?
- b) Is the facility categorized as a major source for PSD? Y
- Single pollutant  $\geq$  100 tpy and on the list of 28 or single pollutant  $\geq$  250 tpy and not on list

If yes for 8(b), explain why this permit modification is not PSD.

The facility submitted a demand growth analysis showing that the actual increase of emissions due to this project is below PSD thresholds. As such, the facility has had applicable conditions relating to reasonable possibility placed upon SN-01 to ensure that this project was not, in fact, a PSD change.

### 9. SOURCE AND POLLUTANT SPECIFIC REGULATORY APPLICABILITY:

| Source      | Pollutant  | Regulation<br>(NSPS, NESHAP or PSD) |
|-------------|--|-------------------------------------|
| 01 and 02   | Particulate  | NSPS AAa                            |
| 01 and 02   | HAPs   | MACT YYYYY                          |
| All Boilers | None   | NSPS Dc                             |
| SN 53       | VOC  | NSPS TT                             |
| All         | NO <sub>x</sub> , CO, PM, PM <sub>10</sub> , PM <sub>2.5</sub> ,<br>SO <sub>2</sub> , VOC, lead, and<br>greenhouse gasses. | PSD                                 |
| Generators  | Criteria and HAPs  | NSPS IIII, and MACT ZZZZ            |
| 100         | HAP  | NESHAP CCCCCC                       |

#### 10. PERMIT SHIELD – TITLE V PERMITS ONLY:

Did the facility request a permit shield in this application? N

#### 11. EMISSION CHANGES AND FEE CALCULATION:

AFIN: 47-00991 Page 3 of 8

See emission change and fee calculation spreadsheet in Appendix A.

#### 12. AMBIENT AIR EVALUATIONS:

The following are results for ambient air evaluations or modeling.

#### a) NAAQS

A NAAQS evaluation is not required under the Arkansas State Implementation Plan, National Ambient Air Quality Standards, Infrastructure SIPs and NAAQS SIP per Ark. Code Ann. § 8-4-318, dated March 2017 and the ADEQ Air Permit Screening Modeling Instructions.

#### b) Non-Criteria Pollutants:

Non-Criteria Pollutant evaluation is based on permit 2305-AOP-R0 results as all HAP emission rates have either remained the same or not increased to a level that would significantly impact previous modelling results.

## 1<sup>st</sup> Tier Screening (PAER)

Estimated hourly emissions from the following sources were compared to the Presumptively Acceptable Emission Rate (PAER) for each compound. The Department has deemed the PAER to be the product, in lb/hr, of 0.11 and the Threshold Limit Value (mg/m³), as listed by the American Conference of Governmental Industrial Hygienists (ACGIH).

| Pollutant    | TLV (mg/m <sup>3</sup> ) | $PAER (lb/hr) = 0.11 \times TLV$ | Proposed lb/hr | Pass? |
|--------------|--------------------------|----------------------------------|----------------|-------|
| Formaldehyde | 15                       | 1.65                             | 0.1236         | Yes   |
| Arsenic      | 0.01                     | 0.0011                           | 0.0043         | No    |
| Cadmium      | 0.01                     | 0.0011                           | 0.00583        | No    |
| HCl          | 3                        | 0.33                             | 1.0            | No    |
| Manganese    | 0.2                      | 0.022                            | 0.161          | No    |
| Mercury      | 0.01                     | 0.0011                           | 0.061          | No    |

<sup>2&</sup>lt;sup>nd</sup> Tier Screening (PAIL)

AERMOD air dispersion modeling was performed on the estimated hourly emissions from the following sources, in order to predict ambient concentrations beyond the property boundary. The Presumptively Acceptable Impact Level (PAIL) for each

AFIN: 47-00991 Page 4 of 8

compound has been deemed by the Department to be one one-hundredth of the Threshold Limit Value as listed by the ACGIH.

| Pollutant | PAIL $(\mu g/m^3) = 1/100$ of<br>Threshold Limit Value | Modeled Concentration (μg/m³) | Pass? |
|-----------|--|-------------------------------|-------|
| Arsenic   | 0.1  | 0.049                         | Yes   |
| Cadmium   | 0.1  | 0.0003                        | Yes   |
| HC1       | 30   | 0.0007                        | Yes   |
| Manganese | 2  | 0.012                         | Yes   |
| Mercury   | 0.1  | 0.0043                        | Yes   |

### c) H<sub>2</sub>S Modeling:

A.C.A. §8-3-103 requires hydrogen sulfide emissions to meet specific ambient standards. Many sources are exempt from this regulation, refer to the Arkansas Code for details.

Is the facility exempt from the H<sub>2</sub>S Standards Y
If exempt, explain: No H<sub>2</sub>S emissions

| Pollutant | Threshold value  | Modeled Concentration (ppb) | Pass? |
|-----------|--|-----------------------------|-------|
|           | 20 parts per million (5-minute average*)                         | 0                           | Y     |
| $H_2S$    | 80 parts per billion<br>(8-hour average)<br>residential area     | 0                           | Y     |
|           | 100 parts per billion<br>(8-hour average)<br>nonresidential area | 0                           | Y     |

<sup>\*</sup>To determine the 5-minute average use the following equation

$$Cp = Cm \left(t_m/t_p\right)^{0.2}$$
 where

Cp = 5-minute average concentration

Cm = 1-hour average concentration

 $t_m = 60 \text{ minutes}$ 

 $t_p = 5 \text{ minutes}$ 

#### 13. CALCULATIONS:
