5. ALL SUBMITTALS:

The following is a list of ALL permit applications included in this permit revision.

Date of Application	Type of Application (New, Renewal, Modification, Deminimis/Minor Mod, or Administrative Amendment)	Short Description of Any Changes That Would Be Considered New or Modified Emissions
5/5/2017	Modification	PSD only due to reevaluation of previous PSD limits.

6. REVIEWER'S NOTES:

El Dorado Chemical Company (EDCC) owns and operates a chemical manufacturing facility located at 4500 North West Avenue in El Dorado, Arkansas. The modification was a PSD modification to adjust the final BACT limits for SN-59 after the end of the demonstration period. During the review it was determined based on changes to control methods more information may be necessary to determine the correct NO_x limit for the source. The demonstration period was extended for 12-months from the date of this

permit. The ammonia BACT limit was removed as ammonia is not a PSD pollutant. Ammonia emission rates were raised to allow proper control of NO_x from the source, with the ammonia rates also to be evaluated during the NO_x demonstration period. This permit also incorporates a minor modification to add an emergency generator, SN-68.

7. COMPLIANCE STATUS:

The following summarizes the current compliance of the facility including active/pending enforcement actions and recent compliance activities and issues.

The facility currently has one active CAO due to the N_2O abaitor malfunction, and one pending for due to excess emission from SN-09.

The facility's last inspection also listed the following concerns: According to the facility's 2016 ACC report, which covers the facility's operations from 11/2015 through 10/2016, the facility denotes several conditions in which there were multiple deviations. The facility states there were 14 deviations involving NOx exceedances during SSM events (SC-18); 34 deviations involving NOx exceedances during SSM events (SC-32); 1 deviation in which RATA results were submitted late (SC-70); 67 deviations involving SO2 exceedances during SSM events (SC-91g); 876 deviations in which the 3-hour operating limit was exceeded (SC-199); 1 deviation in which the Subpart Db notification was submitted without fully complying with the requirements (SC-255); 26 deviations in which the NH3 24-hr. average was exceeded (Interim Condition 1-SN-41 (SC-105)); 1 deviation in which no NOC was submitted as required (PC-16); 1 deviation in which no tune up or energy assessment was completed during the time frame required (PC-24); 1 deviation in which the Subpart DDDDD was submitted without fully complying with the requirements (PC-32); 1159 deviations in which SN-53 exceeded the 3-hr. avg. limit (SC-204); 1 deviation in which the PM-10 limit was exceeded (SC-118); 1 deviation in which no letter was submitted on SN-16A/B reporting cease of use (SC-436); 487 deviations in which SN-53 exceeded the 3-hr. operating limit (SC-204); 63 deviations in which SO2 was exceeded during SSM events (SC-93g); 6 deviations in which SN-41 exceeded NH3 rate (SC-107); 12 deviations in which flare monthly visual logs were not maintained (SC-209); 4 deviations in which natural gas usage was exceeded (SC-216); and, 1 deviation in which Subpart Db was submitted without full compliance (SC-237).

8. PSD/GHG APPLICABILITY:

a) Did the facility undergo PSD review in this permit (i.e., BACT, Modeling, etc.)? Y
If yes, were GHG emission increases significant? N

b) Is the facility categorized as a major source for PSD? Y

- *Single pollutant ≥ 100 tpy and on the list of 28 or single pollutant ≥ 250 tpy and not on list*

12. AMBIENT AIR EVALUATIONS:

Include the results for any ambient air evaluations or modeling. a) Reserved.

b) Non-Criteria Pollutants:

The non-criteria pollutants listed below were evaluated. Based on Department procedures for review of non-criteria pollutants, emissions of all other non-criteria pollutants are below thresholds of concern.

1st Tier Screening (PAER)

Estimated hourly emissions from the following sources were compared to the Presumptively Acceptable Emission Rate (PAER) for each compound. The Department has deemed the PAER to be the product, in lb/hr, of 0.11 and the Threshold Limit Value (mg/m^3), as listed by the American Conference of Governmental Industrial Hygienists (ACGIH).

Pollutant	TLV (mg/m^3)	PAER (lb/hr) = 0.11 × TLV	Proposed lb/hr	Pass?
Ammonia	17	3.5	1,840.4	No

2nd Tier Screening (PAIL)

AERMOD air dispersion modeling was performed on the estimated hourly emissions from the following sources, in order to predict ambient concentrations beyond the property boundary. The Presumptively Acceptable Impact Level (PAIL) for each

compound has been deemed by the Department to be one one-hundredth of the Threshold Limit Value as listed by the ACGIH.

Pollutant	PAIL ($\mu g/m^3$) = 1/100 of Threshold Limit Value	Modeled Concentration ($\mu g/m^3$)	Pass?
Ammonia	173	129	Y
