## Weekly Report Required by Interim Measures Letter dated 8/4/2023

El Dorado Chemical Company, NPDES Permit Number: AR0000752, AFIN: 70-00040

Weekly Report Date: October 20, 2023 Updated portions are underlined>.

### Discharges and Implementation of Emergency Action Plan

EDC did not discharge any water through Outfall 001, Outfall 010, or the emergency spillway between when our interim measures plan was initiated on August 9th, 2023 and the 28<sup>th</sup>. Over the last week, the facility did received a trace of rainfall. Lake Killdeer levels are currently at 16.84 feet. EDC is attempting to keep the levels of Kildeer below 17.0 feet. During the week we have been able to maintain Kildeer levels by discharging 1.0 MGD. In the event of additional rain, EDC will manage the discharge from Kildeer as necessary to ensure water does not overtop the emergency spillway in accordance with the August 4, 2023 Interim Measures letter.

Conduct Daily Sampling of Lake Lee, Lake Killdeer, and Pond 004

EDC commenced this required sampling on August 5, 2023. Updated Information is in the attached 2023 spreadsheet.

## Provide Copies of Sampling of Lake Lee, Lake Killdeer, and Pond 004 Since January 1, 2023

Please see the EDC Interim Measures response dated August 9, 2023.

## Corrective Action Plan Activities [updates from the previous week are underlined]

During our August 17<sup>th</sup> conference call we discussed that these proposed activities may trigger a communication to the ADEQ and possible permit changes. We will continue to communicate plans and improvements to obtain ADEQ's guidance on proper permitting.

### Minimize Wastewater Contaminant Loading

#### Water Reuse:

EDC has evaluated its processes to assess locations where water can be reutilized in processes. Currently we are reusing as much wastewater as possible, that would otherwise flow into Pond 004, and are reusing some water from Pond 004 when the opportunity arises.

### Minimize Wastewater Inflow

EDC has diverted approximately 15% of the water flowing into Pond 004. Parts are now on order that will allow us to divert approximately an additional 15% of stormwater from Pond 004. It is expected to have these installed and operation by the first quarter of 2023. Additionally, we have started an engineering study to divert additional water away from the Ammonia Nitrate facility. This project will focus on paving in and around the Ammonia Nitrate area. EDC has utilized frac tanks to increase the storage capacity of Ammonia Nitrate water to reduce the overflow into Pond 004 from rain events. During the previous rain event it did not appear that any process water overflowed into 004.

### Maximize Treatment Efficiency and Capacity

#### Lake Lee Ammonia Stripper

EDC continues to operate the ammonia stripper with an approximate 20% efficiency.

#### Short Term Treatment of Pond 004

EDC has met with Clean Harbors to develop a short-term treatment system (approximately one year) to provide treatment pending implementation of a permanent solution. EDC has collected samples for Clean Harbors to develop a short-term biological treatment system. Clean Harbors proposed a secondary solution utilizing membrane filtration. This may be a viable alternative; however, it will create a further concentrated waste water stream that will have to be managed. After farther investigation, this process is not viable.

EDC met with Black & Veatch, a wastewater consulting firm, to determine the best treatment possibilities for Pond 004. Based on these initial conversations a biological system seems to be the best path forward. The B&V report was attached in the 13 Oct 2023 report.

Based on review of the Black and Veatch data, EDC is proceeding with biological treatment of 004, but we are still assessing how to address treatment barriers such as predilution, carbon addition, and sludge

generation. EDC has evaluated two existing package plants that would be moved to El Dorado to facilitate biological treatment. This will allow EDC to avoid long lead times on construction of new units and have a solution in place soon. This will probably require permit coverage from ADEQ.

Additionally, we are evaluating possibilities of reuse of the process wastewater as an input into a product.

### Increased Efficiency in Lake Killdeer Biological Activity

Based upon discussion with supplier of nitrification/denitrification bacteria, EDC will begin dosing Lake Killdeer with calcium carbonate or magnesium carbonate to increase the available of carbon and alkalinity in Lake Killdeer. Increasing available carbon should promote additional biological activity to reduce the amount of ammonia in Lake Killdeer and the effluent discharge. EDC has also ordered one ton of lime and will begin dosing Lake Lee with the lime in efforts to increase alkalinity in Lake Lee which flows into Lake Killdeer.

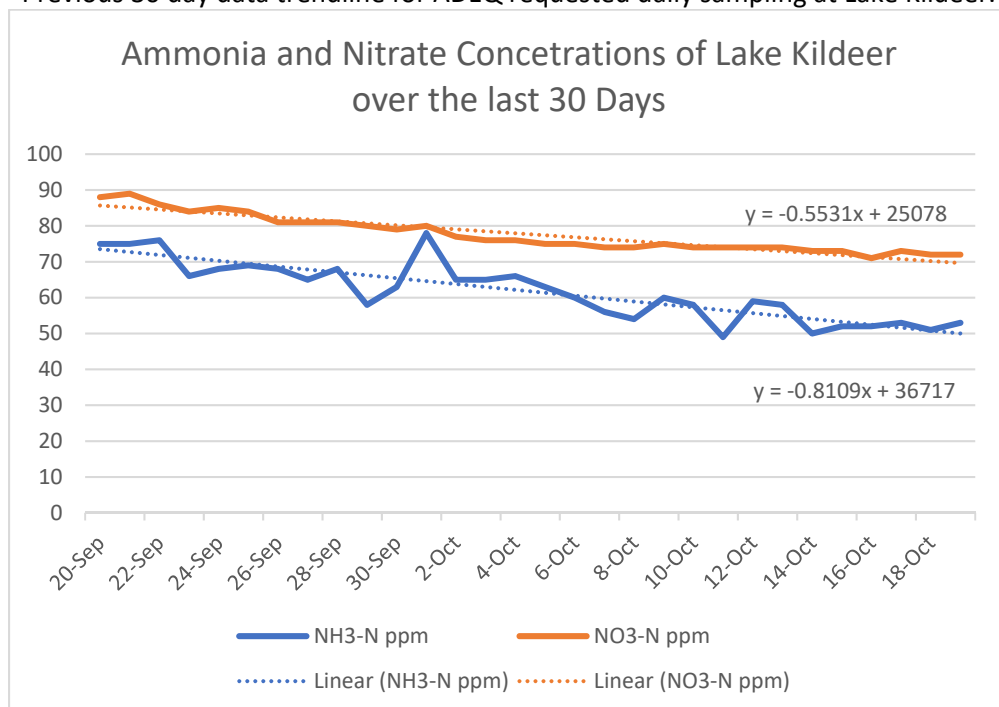

### Baffles in Lake Killdeer

EDC selected a vendor to install baffles in Lake Killdeer. As discussed in our August 17<sup>th</sup> conference call, this should promote longer residence time and further increase biological activity to reduce the amount of ammonia in Lake Killdeer and the effluent discharge. This is expected to be completed in the first quarter of 2024.

## Water Quality Sampling Results

Water quality sampling required by the Interim Measures letter is included in the attached 2023 spreadsheet. For the ammonia data for 004, on the 6<sup>th</sup> through the 10<sup>th</sup>, the sample testing did not result in complete release of ammonia, resulting in lower levels of ammonia being reported. Over the daily sampling period, Nitrates have been reduced by 42% and Ammonia has been reduced by 55%.

Previous 30 day data trendline for ADEQ requested daily sampling at Lake Killdeer.

## Water Column Profile Measurements

EDC has contracted with Alliance Technology Group (formerly GBMc) to complete the profile and sampling of Pond 004, Lake Lee, and Lake Killdeer. The field work was completed on September 28<sup>th</sup>.

## Other Actions

In this call EDC was informed we need to obtain a wastewater operator's license as quickly as possible. Charles McDowell has completed the wastewater operator course work has successfully passed the testing for industrial wastewater operator on the 27<sup>th</sup> of this month. Additionally, we have had a second operator receive the industrial wastewater license. Second, ADEQ advised that EDC should coordinate with other Joint Pipeline members regarding discharges and volumes. We have initiated this communication.

EDC has contracted Alliance Technology to conduct a bathometric survey of 004. The results of the study indicate that Pond 004 contains approximately 1.5 Million Gallons of water.
