RE: Best Management Practices (BMP) Annual Report for 2018;
NPDES Permit AR0001210

Dear Mr. Healey:

Pursuant to 40 CFR 430.03 (i)(4) the Georgia-Pacific Consumer Operations, LLC's Crossett Paper Operation is submitting its annual report of daily wastewater monitoring for the 2018 report year. The attached summary and detail sheets include the number and dates of exceedances of our action levels and any actions taken in response. As documented in 40 CFR 430.03(i)(3), these action level exceedances are not permit violations.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

If you have any questions or need additional information, please contact Anthony Robinson, our Environmental Manager, at (870) 415-1862.

Sincerely,

A handwritten signature in black ink, appearing to read 'Michael L. Hohnadel'.

Michael L. Hohnadel
Vice President of Manufacturing

BEST MANAGEMENT PRACTICES PLAN

MONITORING RESULTS - ANNUAL REPORT SUMMARY

Number	Date	Action Level Exceeded		Incident Description, Corrective Action or Other Action Taken
		LAL	UAL	
1	1 Jan 18 & 2-Jan-18		X	Freezing temperatures caused multiple operations issues. During this time the Recovery Boiler was slowed back and the dissolving tank flow was diverted to the sewer when it became too weak to process. This event caused no treatment issues with the wastewater treatment system
2	30-Jan-18		X	The fiber recovery tank overflowed to the sewer while the pulpmill was down and a sump pump was putting material into the tank. Once this was discovered operators started up the fiber recovery pump to the blow tanks in order to pull the tank level down. Later in the day the hardwood knotter was started to ensure proper operations after work had been performed on it. The sewer conductivity spiked due to a drain being left open. The knotter was stopped immediately and was restarted later once the issue was resolved. These two events caused no treatment issues with the wastewater treatment system.
3	6-Feb-18	X		Excess coating was sent to the sewer from the C3 Board machine. This event caused no treatment issues with the wastewater treatment system.
4	13-Mar-18	X		The hardwood weak black liquor tank was drained for the pulpmill down day. This event caused no treatment issues with the wastewater treatment system.
5	27-Mar-18		X	There were multiple conductivity spikes in the sewer related to the recovery area down day. The causes included a demineralizer fast rinse, draining the Evaporator in preparation for the down day and startup procedures. These events caused no treatment issues with the wastewater treatment system.
6	10-Apr-18		X	A jump line connecting the 50% liquor transfer line from the North and South 50% tanks to the evaporator product sewer valve was found open and allowed 50% black liquor to drain to the sewer. An investigation was conducted for this event and corrective action were put in place including immediately locking the valve in the closed position and updating procedures and employee training. This event caused no treatment issues with the wastewater treatment system.
7	1-May-18		X	The dissolving tank ran over as the recovery boiler was being shut down for an outage. This event caused no treatment issues with the wastewater treatment system.
8	26-May-18	X		There was no evidence of a release from the pulp mill area. TOC measurements both upstream and downstream were well below the target range. This event caused no treatment issues with the wastewater treatment system, and the system operated well within all permit limits.

9	22-Jun-18	X		Excess fiber was sent to the sewer from the C3 Board machine from the couch pit during startup. This event caused no treatment issues with the wastewater treatment system.
10	27-Jun-18	X		There was no evidence of a release from the pulp mill area. TOC measurements both upstream and downstream were well below the target range. This event caused no treatment issues with the wastewater treatment system, and the system operated well within all permit limits.
11	29-Sep-18	X	X	During the Annual Mill Maintenance Outage, many of the storage tanks and process vessels are cleaned in order to conduct the required maintenance activities and tank inspections. Efforts were made to run tank volumes at minimum levels prior to shutdown and/or recover material to the maximum extent possible. Part II. 12 of the NPDES permit allows these essential maintenance activities. This event caused no treatment issues with the wastewater treatment system, and the system operated well within all permit limits.
12	11-Oct-18 & 12-Oct-18	X	X	The blow tank was drained in the pulp mill for repairs. This event caused no treatment issues with the wastewater treatment system.
13	18-Oct-18	X	X	The dissolving tank overflowed weak liquor to the sewer after the recovery boiler went down unexpectedly. This event caused no treatment issues with the wastewater treatment system.
14	11-Nov-18	X	X	White liquor was drained to the sewer because the strength was too low to use in the digesters. This event caused no treatment issues with the wastewater treatment system.
15	26-Nov-18 & 27-Nov-18	X	X	Unplanned mill wide outage caused imbalance and excess carryover of weak pulping liquors to the sewer. This event caused no treatment issues with the wastewater treatment system.
