Mr. Richard Healey
NPDES Enforcement Section
Arkansas Department of Environmental Quality
5301 Northshore Drive
North Little Rock, AR 72118-5317

Reference: Georgia-Pacific Crossett LLC
NPDES Permit # **AR0001210**

Dear Mr. Healey:

Attached are the Discharge Monitoring Reports (DMRs) for the Georgia-Pacific Crossett Paper Operations' - NPDES Permit # **AR0001210** - for April 2016. As required by Part III, Section 4 paragraph a, of our NPDES Permit, a full report fo the chronic toxicity testing has also been included with this submittal.

If you have any questions or need additional information, please feel free to contact Rachel Johnson at (870) 567-8170 or by email at rachel.johnson2@gapac.com .

Sincerely,

Sarah M. Ross
Environmental Manager
Crossett Paper Operations

CHRONIC TOXICITY TEST RESULTS - OUTFALL 001 EFFLUENT
RAMBOLL ENVIRON PROJECT NO. 38-39396A

Dear Ms. Johnson:

April 27, 2016

Ramboll Environ
201 Summit View Dr. Ste 300

www.ramboll-environ.com

Ramboll Environ conducted a chronic (7-day) whole effluent toxicity (WET) test for the Georgia-Pacific Crossett, AR facility. The test was conducted according to requirements in Arkansas NPDES permit AR0001210, and is a follow up for a non-compliant test conducted February 16, 2016. The test organism utilized for the chronic toxicity test was the water flea *Ceriodaphnia dubia* (*C. dubia*).

Composite samples of Outfall 001 effluent were collected on March 21, 23, and 25, 2016. The samples were received at Ramboll Environ on March 22, 24, and 28, 2016. The first and second samples were delivered within the USEPA-required receipt holding time of 36 hours, and temperature range of 0-6.0 °C. The third sample was received outside of USEPA receipt requirements due to a problem with the shipping courier. After consultation with Mary Barnet (ADEQ), the delayed third sample receipt was determined to not invalidate the WET test (correspondence in Attachment 2). The grab samples of river water were received in good condition on the same days as the effluent samples. The tests were initiated upon receipt of the first sample. Test concentrations consisted of 25, 34, 45, 60, and 80 percent effluent and a river water control. A secondary control of moderately hard water was also initiated.

Tests were conducted in accordance with *Short-Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms*, Fourth Edition (EPA-821-R-02-013). Controls met test acceptability criteria (TAC). The results of the chronic toxicity tests are as follows:

TEST RESULTS FOR OUTFALL 001 EFFLUENT	
Permit Limits	***C. dubia***
NOEC Value 80% (lethality)	80%
NOEC Value 80% (sub-lethality)	80%

The results of the chronic test with *C. dubia* indicated no observed effect concentration (NOEC) values for lethality and sub-lethality of 80 percent effluent. These test results indicate no lethal nor sub-lethal toxicity for *C. dubia*.

The *C. dubia* reproduction CV values (for surviving adults) for the river water control and critical dilution are 15.4 and 8.9 percent, respectively, and meet the CV limit of 40 percent for findings of no toxicity. Test precision for reproduction results (as Percent Minimum Significant Difference, PMSD) was 12.3 percent, which is below the USEPA PMSD bounds of 13 to 47 percent for *C. dubia* reproduction. A low PMSD indicates high test precision, but in this case no false positive conditions of toxicity were detected. The effluent concentration-response can be described as flat and is not described in EPA 821-B-00-004 *Method Guidance and Recommendations for Whole Effluent Toxicity (WET) Testing*. A flat concentration-response curve is indicative of a lack of toxicity. This test is considered valid for assessment of permit compliance. The monthly reference toxicant test also met all the test acceptability criteria.

Copies of the laboratory bench sheets with statistical data are presented in Attachment 1. Chain-of-custody documentation and reference toxicant data are presented in Attachment 2. In order to meet the NELAP requirement for listing the total number of report pages; this report consists of 28 pages, including this cover letter, attachment pages and separator pages.

If you have any questions please contact Rick Lockwood at (615) 277-7523. Ramboll Environ appreciates the opportunity to assist Georgia-Pacific with their testing needs.

Yours sincerely,

Richard Lockwood
Project Manager

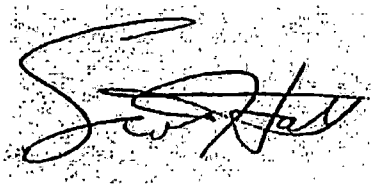
Data Review Form

Acute and Chronic WET Tests

Ramboll Environ

The raw data (i.e., laboratory bench sheets) and data in the applicable summary sheets have been checked and found to be complete. Additionally, test conditions and control performance meet test acceptability criteria specified by the US Environmental Protection Agency and the certifying state authority for the tests conducted[1].



Scott Hall, Department Manager
Water Quality and Ecotoxicology

[1] Any data limitations regarding their applicability for determining NPDES permit compliance are discussed in the report cover letter.

Subject: RE: Georgia-Pacific Crossett LLC - NPDES Permit #AR0001210

Sent by an external sender

Rachel,

As per our conversation on Tuesday, for the test conducted from March 22 – March 29, 2016, the third sample was received late due to shipping currier error.

According to the EPA Chronic method manual "In static-renewal tests, each grab or composite sample may also be used to prepare test solutions for renewal at 24 h, 48 h, and/or 72 h after first use,
if stored at 0-6°C, with minimum head space, as described in Subsection 8.5. If shipping problems (e.g., unsuccessful Saturday delivery) are encountered with renewal samples after a test has been initiated, the permitting authority may allow the continued use of the most recently used sample for test renewal."

Based on the timeline you provided below the test is an acceptable test.

Mary Barnett
Ecologist Coordinator

Subject: Georgia-Pacific Crossett LLC - NPDES Permit #AR0001210

Mary,
As per our conversation yesterday, Georgia-Pacific Crossett LLC (NPDES Permit #AR0001210) did have an issue with our most recent Ceriodaphnia dubia (C.dubia) chronic toxicity test. The third sample (collected on 3/25/16) did not make it to the lab on Saturday (3/26/16), due to a shipping error. The lab was able to continue the test using the sample collected on 3/23/16. The third sample was received on Monday (3/28/16); however, it was received above the required temperature (10.1 °C). The schedule for the test was as follows:

1st , B# 19586 sample pulled / shipped 3/21/16. Arrived and first use 3/22/16. Used for renewal on 3/23 (24 hours).
2nd , B# 19598 sample pulled / shipped 3/23/16. Arrived and first use 3/24/16. Used for renewals on 3/25, 26, 27 (72 hours).
3rd , B# 19603 sample pulled / shipped 3/25/16. Arrived and first use 3/28/16. Test ended 3/29, no renewal.

Sample holding time is <36 hours for the first two samples. Holding time for 3rd sample is ~72 hours. As we are at the end of the month, we will be unable to repeat the test during the month of March. (The test was originally scheduled for earlier in the month; however due to severe flooding conditions we were required to postpone the testing.) We will test again in April; however, due to sub-lethal effects observed in January, we are required to monitor monthly during the months of February, March and April. Please let us know if this test will be accepted as a repeat sample. Thank you.

www.ramboll-environ.com

Ramboll Environ conducted chronic (7-day) whole effluent toxicity (WET) tests for the Georgia-Pacific Crossett, AR facility. The tests were conducted according to requirements in Arkansas NPDES permit AR0001210. Composite samples of Outfall 001 effluent were collected on April 11, 13, and 15, 2016. The samples were received at Ramboll Environ on April 12, 14, and 16, 2016, within the USEPA-required receipt temperature range of 0-6.0 °C. The grab samples of river water were received in good condition on the same days as the effluent samples. Test organisms utilized for the chronic toxicity tests were the fathead minnow (*Pimephales promelas*) and *Ceriodaphnia dubia* (*C. dubia*). The tests were initiated upon receipt of the first sample. Test concentrations consisted of 25, 34, 45, 60, and 80 percent effluent and a river water control. A secondary control of moderately hard water was also initiated.

Tests were conducted in accordance with *Short-Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms*, Fourth Edition (EPA-821-R-02-013). All controls met test acceptability criteria (TAC). The results of the chronic toxicity tests are as follows:

TEST RESULTS FOR OUTFALL 001 EFFLUENT		
Permit Limits	**Fathead Minnow**	***C. dubia***
NOEC Value 80% (lethality)	80%	80%
NOEC Value 80% (sub-lethality)	80%	80%

The results of the chronic test with the fathead minnow indicated a No Observable Effect Concentration (NOEC) value for lethality and sub-lethality of 80 percent effluent. The results of the chronic test with *C. dubia* indicated NOEC values for lethality and sub-lethality of 80 percent effluent. These test results indicate no significant toxicity at the critical dilution (80 percent effluent) for the fathead minnow and *C. dubia* and the permit limit.

The Coefficient of Variation (CV) values for the fathead minnow survival in the river water control and critical dilution are 5.7 and zero percent respectively. The CV values for growth in the control and critical dilution are 10.3 and 8.7 percent, respectively, and meet the CV limit of 40 percent for findings of no toxicity. Test precision for growth results (as Percent Minimum Significant Difference, PMSD) value was 20.6, which is within the USEPA PMSD bounds of 12 to 30 percent when alpha 0.05 is used for hypothesis testing. The effluent concentration-response curve can be described as a Type 10 response in EPA 821-B-00-004 *Method Guidance and Recommendations for Whole Effluent Toxicity (WET) Testing*. A Type 10 (inverse) concentration-response curve is indicative of a lack of toxicity, with effluent growth response exceeding control growth. This test is considered valid for assessment of permit compliance. The monthly reference toxicant test also met all the test acceptability criteria.

The *C. dubia* reproduction CV values (for surviving adults) for the river water control and critical dilution are 26.7 and 16.6 percent respectively. The PMSD value was 23.1 percent, which is within the USEPA PMSD bounds of 13 to 47 percent for *C. dubia* reproduction. The effluent concentration-response is flat and not described in EPA 821-B-00-004. A flat concentration-response curve is indicative of a lack of toxicity. This test is considered valid for assessment of permit compliance. The monthly reference toxicant test also met all the test acceptability criteria.

Copies of the laboratory bench sheets with statistical data are presented in Attachment 1. Chain-of-custody documentation and reference toxicant data are presented in Attachment 2. In order to meet the NELAP requirement for listing the total number of report pages; this report consists of 37 pages, including this cover letter, attachment pages and separator pages.

If you have any questions please contact Rick Lockwood at (615) 277-7523. Ramboll Environ appreciates the opportunity to assist Georgia-Pacific with their testing needs.

Yours sincerely,

Richard Lockwood

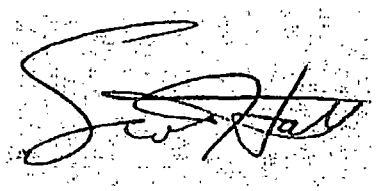
Data Review Form

Acute and Chronic WET Tests

Ramboll Environ

The raw data (i.e., laboratory bench sheets) and data in the applicable summary sheets have been checked and found to be complete. Additionally, test conditions and control performance meet test acceptability criteria specified by the US Environmental Protection Agency and the certifying state authority for the tests conducted[1].



Scott Hall, Department Manager
Water Quality and Ecotoxicology

[1] Any data limitations regarding their applicability for determining NPDES permit compliance are discussed in the report cover letter.

Sample Receipt Checklist:

Client: GP Crossett

Date/Time received 4/12/16 0840 by HM

1. Cooler sealed and intact upon arrival? (Yes) No
2. Custody seals present? Yes (No)
3. Samples received below 6 degrees Celsius? (Yes) No
4. Was ice present? (Yes) No
5. Is the COC filled out correctly including the sample date/time and signed? (Yes) No
6. Was the sample received within 36 hours of collection? (Yes) No
7. Did the sample(s) arrive in good condition? (Yes) No
8. Was pH and DO measured and in range? (Yes) No
9. Was residual chlorine present? (Yes) in River No
   - 1.0 mg/L? (did dechlor occur) Yes (No)

Notes:

Dilution series - 0.375 g/L - 6.0 g/L

NOEC - No Observable Effect Concentration (survival or growth)

LOEC - Lowest Observable Effect Concentration (survival or growth)

ACCEPTABLE TEST RESULTS - A growth NOEC ranging from 750 mg/L to 3,000 mg/L.

(*) used ABS fish

Minimum USEPA CONTROL CRITERIA - 80 percent survival and average dry weight of 0.25 mg (weight based on surviving number of fish).

Ramboll Environ Test Log No. 18165

Notes:
NOEC - No Observable Effect Concentration (survival or reproduction)
LOEC - Lowest Observable Effect Concentration (survival or reproduction)
(*) Minimum USEPA CONTROL CRITERIA - 80 percent survival, 80 percent with 3 broods, and average reproduction of 15 neonates/adult.

After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.
