Reference: Georgia-Pacific LLC: Crossett Paper Operations
NPDES Permit # **AR0001210**

Dear Mr. Uyeda:

Attached are the Discharge Monitoring Reports (DMRs) for the Georgia-Pacific Crossett Paper Operations' - NPDES Permit # **AR0001210** - for December 2013. As required by Part II, Section 5, paragraph d, of our NPDES Permit, a Toxicity Reduction Evaluation (TRE) Activities Report has also been included to cover TRE activities conducted this quarter.

If you have any questions or need additional information, please feel free to contact me at (870) 567-8144 or by email at james.cutbirth@gapac.com.

Sincerely,

James W. Cutbirth
Environmental Services Superintendent

TRE Activities Report
For Fourth Quarter of 2014

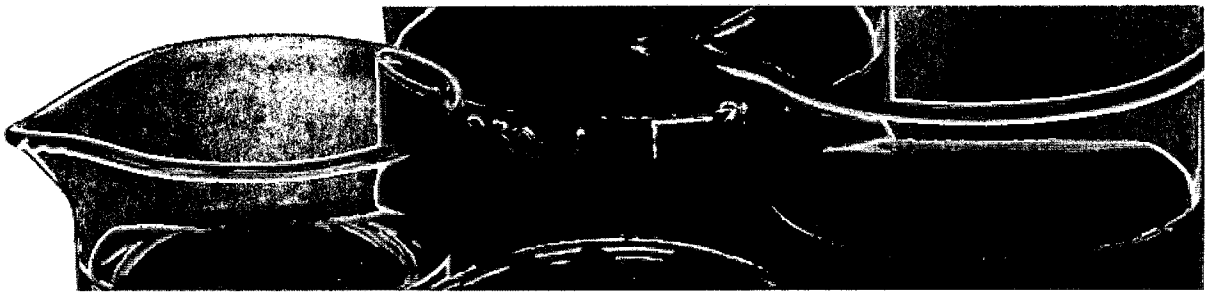
A Toxicity Reduction Evaluation (TRE) Action Plan was submitted on July 12, 2011 after sub-lethal effects were demonstrated in three consecutive Whole Effluent Toxicity (WET) tests for *Ceriodaphnia dubia*, as required by Part II, Condition 15, Paragraph 5 of NPDES permit number AR0001210. As per the plan the mill has begun conducting monthly WET testing for *Ceriodaphnia dubia* in an attempt to capture episodes of sub-lethal toxicity.

Samples collected during October, November and December of this quarter did demonstrate sub-lethal effects. All tests were conducted at the 80 percent effluent test concentration using Ouachita River water as diluent. Concurrent filtration fractionations were run with each test conducted this quarter at the 80 and 100 percent effluent concentrations. The results of these TIE manipulations are outlined in Table 1 below. We are continuing investigations and testing to determine if we can identify the source(s) of the observed effects.

TABLE 1.
Percent Effect to C. dubia Reproduction for Untreated and Treated Effluent
Georgia Pacific, Crossett Arkansas – Fourth Quarter 2013

Water/Test Date	Average Neonates per Female	Percent Inhibition
River Water 10/1/13	25.6	NA
80% 001 Effluent	18.9	26.2[1]
River Water 10/06/13[2]	27.8	NA
80% 001 Effluent filtered	12.3	55.8[1]
100% 001 Effluent filtered	6.6	76.3[1]
River Water 11/19/13	31.9	NA
80% 001 Effluent	27.4	14.1[1]
80% 001 Effluent filtered	26.9	15.7[1]
100% 001 Effluent filtered	26.4	17.2[1]
River Water 12/10/13	27.0	NA
80% 001 Effluent	16.7	38.1[1]
80% 001 Effluent filtered	16.0	40.7[1]
100% 001 Effluent filtered	12.6	53.3[1]

[1] Impaired compared to river water control.
[2] 10/06/13 effluent sample used is a composite of the same samples used for the 10/01/13 test.



Chronic Toxicity Test Results
Outfall 001 Effluent

Re: Chronic Toxicity Test Results - December 2013
ENVIRON Project No. 20-19675G

Dear Ms. Johnson:

ENVIRON conducted chronic (7-day) whole effluent toxicity (WET) tests for Georgia-Pacific in Crossett, AR. The tests were conducted according to requirements in Arkansas NPDES permit AR0001210. Composite samples of Outfall 001 effluent were collected on December 9, 11, and 13, 2013. The samples were received at ENVIRON on December 10, 12, and 14, 2013, within the USEPA-required receipt temperature range of 0-6.0 °C. The grab samples of river water were received in good condition on the same days as the effluent samples. Test organisms utilized for the chronic toxicity tests were the fathead minnow (*Pimephales promelas*) and *Ceriodaphnia dubia* (*C. dubia*). The tests were initiated upon receipt of the first sample. Test concentrations consisted of 25, 34, 45, 60, and 80 percent effluent and a river water control. A secondary control of moderately hard water was also initiated. All control organisms met USEPA test acceptability criteria. The results of the chronic toxicity tests are as follows:

TEST RESULTS FOR OUTFALL 001 EFFLUENT

Permit Limits	Fathead Minnow	*C. dubia*
NOEC Value 80% (lethality)	80%	80%
NOEC Value 80% (sub-lethality)	80%	34%

The fathead minnow chronic test results indicate no significant mortality at the critical dilution (80 percent effluent). The results indicated a No Observable Effect Concentration (NOEC) value for lethality of 80 percent effluent. The sub-lethal NOEC value for fathead minnow growth was 80 percent effluent, which demonstrates no sub-lethal toxicity to the fathead minnow. The results of the chronic test with *C. dubia* indicated a NOEC value for lethality of 80 percent effluent; and a sub-lethality NOEC value of 34 percent effluent. The *C. dubia* test results indicate significant toxicity at the critical dilution for sub-lethal effects.

The river water control for the fathead minnow test met USEPA criteria for test acceptability. The Coefficient of Variation (CV) values for survival in the control and critical dilution are 12.1 and 7.2 percent, respectively. The CV values for growth in the control and critical dilution are 10.8 and 17.7 percent, respectively, and are below the CV limit of 40 percent for findings of no toxicity. The Percent Minimum Significant Difference (PMSD) value was 28.4 percent, which is within the

ENVIRON International Corp. 201 Summit View Drive, Suite 300, Brentwood, TN 37027
V +1 615.277.7570 F +1 615.377.4976

USEPA PMSD bounds of 12 to 30 percent for fathead minnow growth. The effluent concentration-response curve can be described as a flat dose response, and is not described in EPA 821-B-00-004 *Method Guidance and Recommendations for Whole Effluent Toxicity (WET) Testing.* A flat response is indicative of a lack of toxicity. This test is considered valid for assessment of permit compliance. The monthly reference toxicant test also met all the test acceptability criteria.

All *C. dubia* test controls met USEPA criteria for test acceptability. The reproduction CV values for the control and critical dilution are 15.8 and 22.8 percent respectively, which are below the CV limit of 40 percent for a finding of no toxicity. The PMSD value was 18 percent, which is within the USEPA PMSD bounds of 13 to 47 percent for *C. dubia* reproduction. The effluent concentration-response can be described as a Type 1 response in EPA 821-B-00-004. A Type 1 concentration-response curve is an ideal response, and indicative of toxicity. This test is considered valid for assessment of permit compliance. The monthly reference toxicant test also met all the test acceptability criteria.

Copies of the laboratory bench sheets with statistical data are presented in Attachment 1. Chain-of-custody documentation and reference toxicant data are presented in Attachment 2.

In order to meet the NELAP requirement for listing the total number of report pages; this report consists of 38 pages including this cover letter, attachment pages and separator pages.

If you have any questions please contact Rick Lockwood at (615) 277-7523. ENVIRON appreciates the opportunity to assist Georgia-Pacific with their testing needs.

Sincerely,

ENVIRON International Corporation

DATA REVIEW FORM

ACUTE AND CHRONIC WET TESTS

ENVIRON International Corporation

The raw data (i.e., laboratory bench sheets) and data in the applicable summary sheets have been checked and found to be complete. Additionally, test conditions and control performance meet test acceptability criteria specified by the US Environmental Protection Agency and the certifying state authority for the tests conducted.[1]

Scott Hall, Manager
Ecotoxicology Group

[1] Any data limitations regarding their applicability for determining NPDES permit compliance are discussed in the report cover letter.

Re: Chronic Toxicity Test Results - November 2013
ENVIRON Project No. 20-19675G

Dear Ms. Johnson:

ENVIRON conducted a chronic (7-day) whole effluent toxicity (WET) test for Georgia-Pacific in Crossett, AR. The test was conducted as a repeat for a non-compliant test conducted in October 2013 according to requirements in Arkansas NPDES permit AR0001210. Composite samples of Outfall 001 effluent were collected on November 18, 20, and 21, 2013. The samples were received at ENVIRON on November 19, 21, and 23, 2013, within the USEPA-required receipt temperature range of 0-6.0 °C. The grab samples of river water were received on November 12, and 21, 2013 in good condition. The test organism utilized for the chronic toxicity test was *Ceriodaphnia dubia* (*C. dubia*). The test was initiated upon receipt of the first sample (November 19, 2013). Test concentrations consisted of 25, 34, 45, 60, and 80 percent effluent and a river water control. A secondary control of moderately hard water was also initiated. All control organisms met USEPA test acceptability criteria. A test round using both fathead minnow and *C. dubia* was initiated on November 12, 2013, but was terminated early due to failure to receive the third sample. The bench sheets and Chains of Custody for the terminated test are in Attachment 1. The results of the chronic toxicity tests are as follows:

TEST RESULTS FOR OUTFALL 001 EFFLUENT

Permit Limits	*C. dubia*
NOEC Value 80% (lethality)	80%
NOEC Value 80% (sub-lethality)	60%

The results of the chronic tests with *C. dubia* indicated No Observable Effect Concentration (NOEC) values for survival (lethality) of 80 percent effluent. The *C. dubia* test results indicated no significant toxicity at the critical dilution to the survival of *C. dubia*. The sub-lethal NOEC value for *C. dubia* reproduction was 60 percent, which demonstrates sub-lethal toxicity to *C. dubia* at the critical dilution.

All *C. dubia* test controls met USEPA criteria for test acceptability. The reproduction CV values for the control and critical dilution are 8.7 and 8.8 percent respectively, which meets the Test Acceptability Criteria (TAC) limit of 40 percent in case of findings of no toxicity. The PMSD value

ENVIRON International Corp. 201 Summit View Drive, Suite 300, Brentwood, TN 37027
V +1 615.277.7570 F +1 615.377.4976

was 12.4 percent, which is below the USEPA PMSD bounds of 13 to 47 percent for *C. dubia* reproduction indicating high test sensitivity. In this case the percent effect at the critical dilution was 14.1 percent which is greater than the minimal PMSD response of 13 percent. Subsequently, the effect to the 80 percent effluent exposure is considered significant and not a false positive. The effluent concentration-response is described as a Type 7 response in EPA 821-B-00-004, *Method Guidance and Recommendations for Whole Effluent Toxicity (WET) Testing*. A Type 7 response demonstrates significant effects at only the highest test concentration. This test is considered valid for assessment of permit requirements. The monthly reference toxicant test also met all the test acceptability criteria.

Copies of the laboratory bench sheets with statistical data and documentation from the terminated test are presented in Attachment 1. Chain-of-custody documentation and reference toxicant data are presented in Attachment 2.

In order to meet the NELAP requirement for listing the total number of report pages; this report consists of 41 pages including this cover letter, attachment pages and separator pages.

If you have any questions please contact Rick Lockwood at (615) 277-7523. ENVIRON appreciates the opportunity to assist Georgia-Pacific with their testing needs.

Sincerely,

ENVIRON International Corporation

Richard E. Lockwood

DATA REVIEW FORM

ACUTE AND CHRONIC WET TESTS

ENVIRON International Corporation

The raw data (i.e., laboratory bench sheets) and data in the applicable summary sheets have been checked and found to be complete. Additionally, test conditions and control performance meet test acceptability criteria specified by the US Environmental Protection Agency and the certifying state authority for the tests conducted.[1]

Scott Hall, Manager
Ecotoxicology Group

[1] Any data limitations regarding their applicability for determining NPDES permit compliance are discussed in the report cover letter.
