Subject: Fayetteville, Arkansas Noland WRRF, NPDES Permit AR0020010 AFIN-72-00102 Effluent Spill Calculations and Reporting
Date: Thursday, February 23, 2017 4:35:33 PM

Layne,

Thank you for your response concerning the Fayetteville, Arkansas Noland WRRF, NPDES Permit AR0020010 AFIN-72-00102 treated effluent spill DMR reporting question. Per our conversation we will attach a signed letter that includes the best professional estimate of the amount of the spilled flow that occurred on January 30th and January 31st. We will then add the estimated flows to the measured flows reported for these two days and use the combined flow volumes to calculate DMR monthly average pounds per day (lbs/day) permit reporting.

We will also need to use this same procedure for the February DMR because the treated leaked flow was not able to be measured until the afternoon on February 3rd when the leaked flow was pumped to a holding pond.

Thank you again for your guidance on this matter.

Best regards,

Tim Luther
