We feel this problem was due to:

The amount of flow coming into the plant and we were limited on the time we could run our rotors to keep the plant from running sludge on sand filters. Rotors must not have been running for sufficient amount of time to meet limit requirements.

We plan on correcting the problem in this manner:

Reducing inflow/infiltration. We have completed our sewer camera work and have turned it over to the engineers. They have submitted a plan for funding to the WACC comitee for the July meeting. Then we are going to USDA for funding to fix all our issues.

Time estimated that it will take to correct problem:

Spring 2021

Sincerely,

JL Wagoner
