Re: Ammonia Nitrogen for April and November thru March
Selenium

Mr. Anderson,

The City has purchased three 10hp paddle floating aerators to replace units that were not functioning. These new aerators will be in service within seven days. The existing baffle curtain will be having new floats added to replace the ones that have deteriorated over time. This action will stop the short circuiting of the wastewater flow.

The City has applied for funding to Rural Development to expand the facility which does include the required equipment and tankage to meet the City's new permit parameters. At this time, we are waiting on the funding to be approved. It is anticipated that the funding will occur within the next two months which will allow us a four month window to complete the plans and submit to the regulatory agencies for approval. The City has completed the preliminary plans for the plant in anticipation of the funding occurring and submission to the required agencies.

The City continues to monitor the daily operational aspects of the plant to adjust as necessary.

Thank you,

Larry Dunaway
Public Works Director
