Simon,

I will issue the PO number in the morning (Thursday) and get the particulars concerning lead times and installation scheduled.

Thank you,
Terry

Terry,

Its very important that we have these valves replaced in order to repair the faulty motive pump and to stop unnecessary leakage. Please issue a PO and notify Jack Tyler Engineering that we can proceed.

If you could, will you find out the lead time on these valves and let Tom and I know?

Subject: Fw: DeZURIK Valve Replacement Quote

Simon,

I finally received the quote from Jack Tyler Engineering for replacing the defective 12-inch valve that is preventing us from being able to pull the motive pump on SBR#1. The 14-inch valve mentioned is one that is leaking when activated. Actually both 14-inch valves have started to leak when activated, but one is much worse than the other. I'm not sure if the leak can be eliminated by adding new packing to the valve - I think that is something we can ask when the 12-inch valve is replaced. Because we are going to have to partially drain the SBR basins to replace the valves in question, I do not see any way to replace both valves on the same day or even possibly on consecutive days, so there will be multiple trips involved in getting the valves replaced. I recommend that we schedule replacement of the 12-inch valve as soon as possible so we can move forward with the motive pump issues. We can then discuss options for the 14-inch valve.

What are your thoughts?

Thank you,

Terry

Subject: DeZURIK Valve Replacement Quote

Hi Terry,

Per our earlier conversations, please find quote attached to replace the 12" and 14" DeZURIK plug valves. After review, please let us know if you have questions or need any additional information. I am attaching the pictures previously sent along with the submittal pages for the existing valves just so everything is in one place.

Many thanks,

Charlotte W. Hayes
