We feel this problem was due to:

Our mixed liquor concentration usually is between 3500 and 4000. During this time due to the freezing temperatures and ice on our equipment for several weeks we were unable to waste. Our mixed liquor concentration was averaging above 6000 causing more solids than usual to inter the effluent.

To correct this problem in the future we need to plan ahead and lower our mixed liquor concentration as the weather predicts.

Yours Very Truly,

Authorized Signature
