Subject: West Memphis Utilities AR0022039

3/12/15- I spoke with Paul Holloway, plant superintendent for West Memphis Utilities. He stated that with his pond level within 20 inches of the top of the levee he is having to bypass his retention pond to lower the level. The bypass is going into the Mississippi River. He said the water in the retention pond has been through most of the treatment plant. I informed him that this is an unpermitted discharge and must be stopped as soon as possible.
