Re: NPDES Permit AR0033766

Dear Ms. Brown:

As required by Part II Paragraph 7B of the above referenced permit, Paragould Light, Water and Cable (PLWC) has performed a technical evaluation to determine if the existing technically based maximum headworks loadings (MAHL) and maximum headworks concentrations (MAHC) are based on current state water quality standards.

Based on current MAHLs, no local limits are necessary to protect current water quality standards. Therefore, PLWC certifies that the existing MAHLs in the Pretreatment Program are based on current water quality standards and are adequate to prevent pass through of pollutants, inhibition of, or interference with the treatment facility, and prevent sludge contamination.

If you have questions or need additional information, please contact Lisa Ellington by phone at (870) 239-7795 or by email at lellington@paragould.com. Thank you.

Sincerely,

Darrell Phillips
General Manager / CEO
