ARKANSAS DEQ

NORTH LITTLE ROCK, AR

Dear ADEQ,

We have a local Goat Milk Processing Plant that dumped formulated goat milk into the sanitary sewer on February 6, 2019. I had samples at that time, which caused composite sample to show that there was an increase in flow and caused the Nitrates and Nitrites to have significant increases. After the dumping of milk occurred, I spoke with the manager and new owners of the Goat plant. The owners are working on getting a new system in place that the company can use to properly dispose of their materials. The state inspector attended our meeting today and informed them that this situation must be resolved.

SINCERELY,

STUART OXFORD
