Subject:	FW: E. Coli Testing
Attachments:	Ee. Coli Testing

On Monday (7/24) and Tuesday (7/25) we took samples at Sample Sites #1 and #2 to test for E. Coli. This was not due to an overflow but done to get two consecutive results per our SOP to conclude safe bacteriological standards were meet for the water.

Results along with testing dates, time and temps are included in the attachment to this email.

At the time of this test our lab program had not been updated to include E Coli. We have corrected this problem for future test results.

If there are any questions please email or call (501-304-1249) me.
