

Bio-Analytical Laboratories (BAL)  
ADEQ Certificate #88-0630  
Project X5466

**Bio-Analytical Laboratories' Executive Summary**

**Permittee:** Magnolia Wastewater System  
P.O. Box 666  
Magnolia, AR 71753

**Project #:** X5466

**Outfall:** 001 (treated municipal wastewater)

**Permit #:** AR0043613/ AFIN #14-00059

**Contact:** Russell Thomas

**Dates:** June 24 - July 2, 2014

**Test Type:** Chronic Static Renewal Survival and Reproduction Test using *Ceriodaphnia dubia* (EPA Method 1002.0)  
Chronic Static Renewal Survival and Growth Test using *Pimephales promelas* (EPA Method 1000.0)

**Results:**

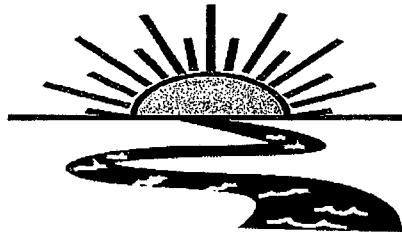

**For *Ceriodaphnia dubia*:**

1. If the NOEC for survival is less than the critical dilution (100.0%), enter a "1"; otherwise, enter a "0" for Parameter TLP3B - 0 -Pass
2. If the NOEC for reproduction is less than the critical dilution, enter a "1"; otherwise, enter a "0" for Parameter TGP3B - 0 - Pass
3. Report the NOEC value for survival, Parameter TOP3B - 100.0%.
4. Report the NOEC value for reproduction, Parameter TPP3B - 100.0%.
5. Report the largest % coefficient of variation between the control and the critical dilution, Parameter TQP3B - 24.51%.

**For *Pimephales promelas*:**

1. If the NOEC for survival is less than the critical dilution (100.0%), enter a "1"; otherwise, enter a "0" for Parameter TLP6C - 0 -Pass
2. If the NOEC for growth is less than the critical dilution, enter a "1"; otherwise, enter a "0" for Parameter TGP6C - 0 - Pass
3. Report the NOEC value for survival, Parameter TOP6C - 100.0%.
4. Report the NOEC value for reproduction, Parameter TPP6C - 100.0%.
5. Report the largest % coefficient of variation between the control and the critical dilution, Parameter TQP6C - 30.68%.

This report contains a total of 42 pages, including this page. The results contained within pertains only to the samples listed on the chain of custody documents in Appendix A. The information meets the standards set forth by ADEQ. The chemical data in this report is for monitoring purposes only and should not be reported on discharge monitoring reports.

## 1.0 Introduction

Bio-Analytical Laboratories (BAL), Doyline, Louisiana conducted two chronic definitive toxicity tests for Outfall 001 at Magnolia Wastewater System, Magnolia, Arkansas. The test organisms used were the cladoceran, *Ceriodaphnia dubia*, and the fathead minnow, *Pimephales promelas*. The purpose of this study is to determine if appropriately dilute effluent samples adversely affect the survival, reproduction and/or growth of the test organisms. Toxicity is defined as a statistically significant difference at the 95 percent confidence level between the survival, reproduction and/or growth of the test organism in the critical dilution (the effluent concentration representative of the proportion of effluent in the receiving water during critical low flow or critical mixing conditions) compared to the survival, reproduction and/or growth of the test organism in the control. The test endpoint is the No-Observed-Effect-Concentration (NOEC), the highest effluent concentration that is not significantly different from the control.

## 2.0 Methods and Materials

### 2.1 Test Methods

All methods followed were according to the latest edition of "Short-Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms" (EPA-821-R-02-013), "Standard Methods for The Examination of Water and Wastewater. 20<sup>th</sup> Edition" (APHA 1998. Chemical results using this edition are listed in the report as SM 1997), and BAL's standard operating procedure.

### 2.2 Test Organisms

The *Ceriodaphnia dubia* test organisms were cultured in-house at test temperature and dilution water hardness and were less than 24 hours old at test initiation. The neonates were released within the same 8-hour period. The fathead minnow test organisms were obtained from Aquatic Biosystems, Fort Collins, Colorado (ABS) and were less than 48 hours old at test initiation. The minnows were acclimated to test temperature and dilution water hardness prior to test initiation. Monthly chronic reference toxicant tests were conducted in order to document organism sensitivity and demonstration of capability.

### 2.3 Dilution Water

Soft reconstituted water, made per method guidelines, was used as the dilution water and the control for the toxicity tests.

BAL  
ADEQ #88-0630  
Project X5466

## **2.4 Test Concentrations**

The test concentrations used in the chronic toxicity tests were 100.0, 80.0, 56.0, 42.0 and 32.0 percent effluent and a reconstituted water control. The critical dilution was 100.0 percent effluent. The *Ceriodaphnia* test was conducted using 10 replicates of one animal each for a total of 10 animals per concentration. The fathead minnow test was conducted using five replicates of eight animals each for a total of 40 animals per concentration.

## **2.5 Sample Collection**

Three 24-hour composite samples of Outfall 001 were collected by Magnolia personnel on June 23, 25 and 27, 2014. Upon collection and completion of each composite, the samples were packed in ice and delivered to the laboratory the day of collection by BAL personnel. The sample temperature upon arrival of each sample was 4.1, 0.6 and 2.1<sup>0</sup> Celsius, respectively.

## **2.6 Sample Preparation**

Upon arrival, the samples were logged in, given an identification number and refrigerated unless needed. Prior to use, the samples were warmed to 25±1<sup>0</sup> Celsius. Total residual chlorine levels were measured with a Capital Controls<sup>R</sup> amperometric titrator (SM 4500-Cl D 1997) and recorded if present. Total ammonia levels were measured using a HACH<sup>R</sup> test strip. Dissolved oxygen (SM 4500-O G 1997) and pH (SM 4500-H+ B 1997) measurements were measured on the control and each concentration at test initiation, at test renewal and at test termination. Conductivity (SM 2510 B 1997) measurements were also taken at test initiation and at each renewal. Alkalinity (SM 2320 B 1997) and hardness (SM 2340 C 1997) levels were measured on the control and the undiluted effluent samples.

## **2.7 Monitoring of the Tests**

The cladoceran test was run in a Precision<sup>R</sup> dual-programmable, illuminated incubator at a temperature of 25±1<sup>0</sup> Celsius. The fathead minnow test was run in a circulating waterbath, using a Remcor<sup>R</sup> heated liquid circulator to keep a constant temperature of 25±1<sup>0</sup> Celsius. AEMC<sup>R</sup> data-loggers were used to monitor diurnal test temperature. Test temperatures were recorded at the beginning of the day, after test renewal and at the end of the day. Light cycles and intensities were recorded twice a month.

## **2.8 Data Analysis**

*Ceriodaphnia dubia* survival data was analyzed using Fisher's Exact Test, an equality test comparing concentration data to control data. Reproduction data was analyzed using Dunnett's Test, a parametric test comparing concentration data to control data.

BAL  
ADEQ #88-0630  
Project X5466

Fathead minnow survival data was analyzed using Steel's Many-One Rank Test, a non-parametric test comparing concentration data to control data, while the growth data was analyzed using Dunnett's Test. The chronic endpoints in the reference toxicant tests were obtained by approved EPA methods of analysis.

### 3.0 Results and Discussion

The results of the *Ceriodaphnia dubia* test can be found in Table 1. Ninety percent survival occurred in the control and in the critical dilution after eight days of exposure. The average number of neonates per female after three broods in the control was 14.3 and the average in the critical dilution was 18.1. The No-Observed-Effect-Concentration (NOEC) for survival and reproduction in this test was 100.0 percent effluent ( $p=.05$ ).

The fathead minnow test results can be found in Table 2. Eighty percent survival occurred in the control and 82.5 percent survival occurred in the critical dilution after seven days of exposure. The average weight gained in the control was 0.525 milligram (mg) and the average weight gained in the critical dilution was 0.563 mg. The NOEC for survival and growth in this test was 100.0 percent effluent ( $p=.05$ ).

**Table 1: Results of the Chronic Definitive *Ceriodaphnia dubia* Test**

Percent Effluent	Percent Survival	Sig.*	Mean # Neonates-Surviving	Mean # Neonates -Total	Sig.*
Control	90.0		15.7	14.3	
32.0	100.0		19.9	19.9	
42.0	100.0		20.4	20.4	
56.0	90.0		18.0	17.0	
80.0	100.0		20.7	20.7	
100.0	90.0		19.0	18.1	

\*significant when compared to the control ( $p=.05$ ). Test validity based on mean number of neonates per surviving female. NOEC value based on total mean number of neonates.

BAL  
ADEQ #88-0630  
Project X5466

**Table 2: Results of the Chronic Definitive Fathead Minnow Test**

Percent Effluent	Percent Survival	Sig.*	Mean Dry Weight (mg)	Sig.*
Control	80.0		0.525/0.652+	
32.0	92.5		0.628	
42.0	92.5		0.618	
56.0	95.0		0.660	
80.0	95.0		0.715	
100.0	82.5		0.563	

\*significant when compared to the control (p=.05).+Test validity based on mean dry weight per surviving larvae in the control.

The chronic reference toxicant tests conducted this month showed the *Ceriodaphnia dubia* test organisms to be within the respective sensitivity range; however, the minnows were too sensitive. This did not seem to affect this test. The graphs of the results of the chronic reference toxicant tests can be found in Appendix D- Quality Assurance Charts.

#### **4.0 Conclusions**

The three composite samples of Outfall 001 collected on June 23, 25 and 27, 2014, from Magnolia Wastewater System, Magnolia, Arkansas, were not found to be lethally toxic to the fathead minnow test organisms nor the *Ceriodaphnia dubia* test organisms in the 100.0 percent critical dilution after seven and eight days of exposure, respectively (p=.05). Sub-lethal effects (i.e. lack of growth or reproduction) were not noted in the critical dilution in either test (p=.05).

**Ceriodaphnia dubia**  
**Survival and Reproduction (cont)**

**1. Fisher's Exact Test:**

Is the mean survival at the end of the test significantly different ( $p=.05$ ) than the control survival for the % effluent corresponding to (lethality):

a) LOW FLOW OR CRITICAL DILUTION (100.0%):	YES	X	NO
b) ½ LOW FLOW DILUTION (N/A %):	YES		NO

**2. Dunnett's Procedure or Steel's Many-One Rank Test as appropriate:**

Is the mean number of young produced per female significantly different ( $p=.05$ ) than the control's number of young per female for the % effluent corresponding to (significant non-lethal effects):

a) LOW FLOW OR CRITICAL DILUTION (100.0%):	YES	X	NO
b) ½ LOW FLOW DILUTION (N/A %):	YES		NO

**3. If you answered NO to 1. a) and 2. a) enter (0) otherwise enter (1): 0**

**4. If you answered NO to 1. b) and 2. b) enter (0) otherwise enter (1): N/A**

**5. Enter response to item 3 on DMR Form, parameter #TEP3B.**

**6. Enter response to item 4 on DMR Form, parameter #TFP3B.**

**7. Enter percent effluent corresponding to each NOEC below and circle lowest number:**

a) NOEC survival:	100.0% effluent
b) NOEC reproduction:	100.0% effluent
c) LOEC survival:	N/A % effluent
d) LOEC reproduction:	N/A % effluent
