RE: Modification to Groundwater Monitoring Program
CAO LIS 06-153; AFIN: 70-00040

Dear Mr. Carver:

This letter is in response to the El Dorado Chemical Company (EDCC) letter dated June 30, 2009 in which you proposed to modify the groundwater sampling program in accordance with Consent Administrative Order (CAO) LIS 06-153, Order and Agreement Condition 3. According to the letter, EDCC is requesting the elimination of the analysis for vanadium in all 22 groundwater monitoring wells.

Based on a review of the data, the concentrations of vanadium have been below the detection limit or very low in all of the 22 groundwater monitoring wells. Therefore, the request to eliminate the analysis for vanadium from all 22 groundwater monitoring wells is approved. EDCC must continue to analyze for nitrate, ammonia, total dissolved solids (TDS), sulfate, total and dissolved lead, total and dissolved chromium, pH, temperature, and specific conductance in accordance with the conditions and requirements of Consent Administrative Order (CAO) LIS 06-153.

Thank you for your cooperation in this matter. If you have any questions, please contact Mr. Jerry Neill, P.G. at (501) 682-0642 or by e-mail at neill@adeq.state.ar.us.

Sincerely,

Mo Shafii
Assistant Chief
Water Division

RE: El Dorado Chemical Company
Groundwater Monitoring Program

Dear Mr. Neill:

El Dorado Chemical Company (EDCC) staff recently reviewed the latest round of semi-annual results for our monitor wells (see attached). The purpose of the review was to determine if any modifications to the sampling of the monitor wells was appropriate based upon the historical results. As specified in Consent Administrative Order LIS 06-153, Order and Agreement Condition 3, EDCC is required to sample 22 monitor wells for nitrate, ammonia, total dissolved solids (TDS), sulfate, total and dissolved lead, total and dissolved chromium, pH, temperature and specific conductance. Condition 3 also allows for modification to the sampling program based upon review of the data and ADEQ approval. A previous modification was approved by Laura Stuart in a letter dated June 8, 2007 (see attached).

EDCC would like to propose a modification to the facility groundwater monitoring program by requesting the elimination of testing for Vanadium in all 22 monitor wells. This modification was anticipated in Laura Stuart's June 8, 2007 letter.

The annual groundwater report will continue to be provided by April 1 of each year. If you would like to discuss the proposed modifications to the monitoring program, please give me a call at (405) 235-4546. EDCC would like to implement the changes for the upcoming November 2009 sampling event so a response at your earliest convenience would certainly be appreciated.

Sincerely,

A handwritten signature in black ink that reads "John M. Carver".

RE: El Dorado Chemical Company
AFIN-70-00040
Ground Water Monitoring Program – Sampling Modification Request
2006 Annual Ground Water Report

Dear Mr. Carver:

The Department has reviewed both the Ground Water Monitoring Program Modification request and the 2006 Annual Ground Water Report. Comments regarding both documents are described in the paragraphs below.

Ground Water Monitoring Program – Sampling Modification Request

The Department received your request dated April 25, 2007 to modify the sampling frequency of parameters during the ground water monitoring events at the El Dorado Chemical Company (EDCC). In accordance with condition no. 3 of the Order and Agreement in the CAO LIS 06-153, modifications can be made to the semi-annual ground water monitoring program based upon data collected at the site. Although we discussed the modifications by phone and e-mail on May 18, 2007 prior to the next scheduled sampling event for the week of May 21st, this letter serves as the formal communication for these modifications.

After a review of your request, the 2006 Annual Ground Water Report and the October 2005 sampling program changes, these modifications to the ground water sampling program are indicated in the table below. This sampling schedule was selected based on background well data, wells with historically low levels since monitoring began in 2001, wells with historically higher levels of nitrates, ammonia, sulfates and/or TDS, and the two recovery wells installed in June 2006. Ground Water monitor wells MW-4, MW-5, MW-6, MW-7, MW-8, MW-9, MW-10 and MW-11 are located in the vicinity of the recovery wells and data from the ground water monitoring wells will provide data to determine the effectiveness and operation of the recovery system. Lead and chromium were removed from analysis in 2005 and I recommend that they be added to the 2008 event for confirmation that the levels remain at the previously documented background levels. Vanadium was added in 2004 and I recommend that it remain on the list through semi-annual event in 2007 and 2008 in order to obtain enough data for statistical comparison. At that time, we can re-evaluate and determine whether this parameter should be continued or suspended. Analysis for the remediation parameters, as indicated on Table 26 in the 2006 Annual Ground Water Report, should also be continued according to the schedule listed in the table below.

Analysis of Total Dissolved Solids (TDS) was suspended in 2005 and conductivity was added. I recommend that we remain with conductivity instead of TDS. Conductivity is a good indicator of TDS and vice versa, so there is a need to duplicate efforts. If the conductivity measurements

indicate something other than background or do not remain historically consistent, TDS may be added.

Should new data become available, we may need to modify this list again and re-evaluate the parameters if site conditions or data suggest changes are necessary.

2006 Annual Ground Water Report

The 2006 Annual Ground Water Report was submitted by e-mail on March 29, 2007. Based upon the review of the annual report, please submit the following items for the 2007 report and included in subsequent reports:

- 1) Indicate recovery wells locations on the site map;
- 2) Include data from the operation of the recovery wells, (i.e., volume, treatment and disposal methods, operational and maintenance (O&M) information, such as replacement of filters, pumps, etc., and any other per);
- 3) Include water level measurements of the recovery wells;
- 4) Provide data on the determination of the statistical trends from Appendix A; and
- 5) Plume maps of nitrate, ammonia and sulfate for the 2008 report.

Thank you for your cooperation with this project. Please do not hesitate to contact me with any questions by phone at (501) 682-0642 or by e-mail at stuart@adeq.state.ar.us.

Sincerely,

Laura Stuart, P.G.
