This hog farm and its waste disposal / dumping / lagoons / seepage into the Buffalo River has caused my property to lose value. I have been trying to sell my property located down stream from the Carver landing on the Buffalo. I have only had a few inquiries, but when those people found out the property was down stream from the hog farm waste seepage into the river they said , "not interested".

I have been deprived of needed income from selling my farm because of this hog farm waste. Some have expressed their belief that this is just opening the door to the entire region being converted to factory hog farms thereby making it unfit for human habitation as has happened in Iowa and other areas of the country.

I urge no renewal or modifications to expand more dumping / spreading of any and all permits for this hog farm operation or its waste disposal.
