Subject: C&H Farm Permit
Date: Monday, March 14, 2016 9:47:06 AM

Please allow the permit change and the additional land for spreading nutrients from the holding ponds of C&H. With the increase amount of land that is further away from the Buffalo River should ease some concerns about increase levels of bacteria and nutrients in the river.assumed to be associated with this family farming operation. There is still a major concern of possible issues of bacteria and phosphorus that no one has considered that might be from the 1.5 million people who visit the river, the increase number of wild hogs in the river, the National Parks system's sewage treatment system that involves land spreading, and the elk in the river....Again allowing the change in permit should allow for more land spreading of nutrients away from the main farm...
