RE: Villages of Cross Creek
AFIN # 01-00899 Permit #4811-WR-3

I am sending this letter to you as a follow up to our meeting on January 27, 2015 regarding the above referenced facility. I appreciate the time you, Jamal Solaimanian and Colby Ungerank spent with Ken Gregory and myself conversing our mutual concern and options for bringing this facility into compliance with the permit requirements.

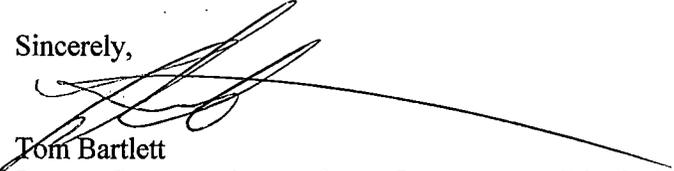

As discussed, we are exploring the viability of changing this facility to an NPDES discharge permit to eliminate the need for the subsurface drip irrigation fields. The current permit is for a design flow of 33K GPD, but historical data shows that at full occupancy of the apartments the flow is consistently between 18K and 22K GPD. The current permit requirements are 15/CBOD5, 15/TSS and 2000 on fecal coliform. We are exploring retrofitting the existing facility to comply with the permit requirement effluent limitation which you had suggested may be 10/CBOD5, 15/TSS and 1000 on fecal coliform; the dissolved oxygen and ammonia requirements yet to be determined.

The GPS coordinates for the limited stream we are considering discharging to are:

36° 21' 55.59" N 94° 08' 42.55" W Elevation 1266'

We are prepared to move forward on this option and appreciate your input as to the feasibility of utilizing this location for our discharge. I look forward to your response and continued support regarding this matter. Thank you for your assistance.

Sincerely,

Tom Bartlett
