Please deny permit 5264-W for the C&H hog CAFO in the Buffalo National River watershed. As the nation's first National River, Arkansas can set an example of how to properly manage such an amazing and unique area. CAFO's are a biological hazard anywhere, but to allow one to operate in this sensitive area with porous rock is a mistake. The small benefit to a few people in Arkansas to supply hogs to JBS (a Brazilian company) does not outweigh the damage that is being done and can be done by millions of gallons of hog waste. Allowing the CAFO in the first place was a mistake admitted by many, politicians included. Please correct this mistake and deny this permit.

Thanks,
Corey Duncan
